Radioactivity in the Environment Vlado Valkovic, 2000-09-26 Numerous sources of ionizing radiation can lead to human exposure natural sources nuclear explosions nuclear power generation use of radiation in medical industrial and research purposes and radiation emitting consumer products Before assessing the radiation dose to a population one requires a precise knowledge of the activity of a number of radionuclides The basis for the assessment of the dose to a population from a release of radioactivity to the environment the estimation of the potential clinical health effects due to the dose received and ultimately the implementation of countermeasures to protect the population is the measurement of radioactive contamination in the environment after the release It is the purpose of this book to present the facts about the presence of radionuclides in the environment natural and man made There is no aspect of radioactivity which has marked the passing century not mentioned or discussed in this book Radioactivity in the environment, 2000 *Environmental Management Handbook, Second Edition - Six Volume Set* Sven Erik Jorgensen, Brian D.
