Raiders Desert Strike Force Campaign 2:

Special Operations in World War II Andrew L. Hargreaves, 2013-10-28 British and American commanders first used modern special forces in support of conventional military operations during World War II. Since then, although special ops have featured prominently in popular culture and media coverage of wars, the academic study of irregular warfare has remained as elusive as the practitioners of special operations themselves. This book is the first comprehensive study of the development, application, and value of Anglo-American commando and special forces units during the Second World War. Special forces are intensively trained, specially selected military units performing unconventional and often high-risk missions. In this book, Andrew L. Hargreaves not only describes tactics and operations but also outlines the distinctions between commandos and special forces, traces their evolution during the war, explains how the Anglo-American alliance functioned in the creation and use of these units, looks at their command and control arrangements, evaluates their impact, and assesses their cost-effectiveness. The first real impetus for the creation of British specialist formations came in the desperate summer of 1940 when, having been pushed out of Europe following defeat in France and the Low Countries, Britain began to turn to irregular forces in an effort to wrest back the strategic initiative from the enemy. The development of special forces by the United States was also a direct consequence of defeat. After Pearl Harbor, Hargreaves shows the Americans found themselves in much the same position as Britain had been in 1940: shocked, outnumbered, and conventionally defeated, they were unable to come to grips with the enemy on a large scale. By the end of the war, a variety of these units had overcome a multitude of evolutionary hurdles and made valuable contributions to practically every theater of operation. In describing how Britain and the United States worked independently and cooperatively to invent and put into practice a fundamentally new way of waging war, this book demonstrates the two nations' flexibility, adaptability, and ability to innovate during World War II.

Arnold-Friend, 1979 **Employment of the Engineer System in Arid Mountainous and Desert Areas--a Concept Paper** Paul G. Cerjan, Theodore G. Stroup, 1981 The employment of the Engineer system is examined for desert and arid mountainous terrain. Geographic focus for the paper is the Mediterranean basin along North Africa, the Arabian Peninsula, Southwest Asia, and the horn of Africa. Such terrain presents the military engineer a terrain spectrum not heretofore considered in the last two or three decades. Historical research provides lessons learned from WW II, 1967, and 1973 wars. Impact on system elements, mobility, countermobility, survivability, and general engineering vis-à-vis the terrain is discussed. Considerations and recommendations are offered for each system element for realistic and timely implementation rather than long development processes and large resource outlays. Engineer force structure considerations are postulated for a deployment into an austere arid area. Additional considerations are presented for areas of doctrine, equipment, and training. Commanders and staff officers of engineer and engineer-supported units should be able to garner ideas and

techniques from paper discussion for potential near term contingency missions and projects focused on desert and arid mountainous terrain areas **Special Bibliographic Series** US Army Military History Research Collection,1978 **A Bibliography of Military Geography** Eugene J.
