Natal Agriculture Journal, 1907 *Seeking a Richer Harvest* Tina Thurston, Christopher T Fisher, 2006-11-25 Subsistence intensification innovation and change have long figured prominently in explanations for the development of social complexity among foragers and horticulturalists and the rise of chiefly societies and archaic states yet there is considerable debate over the actual mechanisms that promote these processes Traditional approaches to the intensification question emphasize population pressure climate change bureaucratic management or even land degradation as prerequisites for the onset of new or changing strategies or the construction and maintenance of agricultural landscapes Most often these factors are modeled as external forces outside the realm of human decision making but recent archaeological research presents an alternative to this suggesting that subsistence intensification is the result of human driven strategies for power prestige and status stemming from internal conditions within a group When responding to environmental adversity human groups were less frequently the victims as they have been repeatedly portrayed Instead human groups were often vigorous actors responding with resilience ingenuity and planning to flourish or survive within dynamic and sometimes unpredictable social and natural milieux

Office of the Secretary, 1893 **Settlement, Subsistence, and Social Complexity** Richard E. Blanton, 2006-12-31 This volume brings together the work of some of the most prominent archaeologists to document the impact of Jeffrey R. Parsons on contemporary archaeological method and theory. Parsons is a central figure in the development of settlement pattern archaeology in which the goal is the study of whole social systems at the scale of regions. In recent decades, regional archaeology has revolutionized how we understand the past, contributing new data and theoretical insights on topics such as early urbanism, social interactions among cities, towns, and villages, and long-term population and agricultural change among many other topics relevant to the study of early civilizations and the evolution of social complexity. Over the past 40 years, the application of these methods by Parsons and others has profoundly changed how we understand the evolution of pre-Hispanic Mesoamerican civilization, and now similar methods are being applied in other world areas. The book's emphasis is on the contribution of settlement pattern archaeology to research in pre-Hispanic Mesoamerica, but its authors also point to the value of regional research in South America, South Asia, and China. Topics addressed include early urbanism, household and gender, agricultural and craft production, migration, ethnogenesis, the evolution of early chiefdoms, and the emergence of pre-modern world systems.
