Nutrition and health of the gastrointestinal tract M.C. Blok, H.A. Vahl, L. de Lange, A.E. v.d. Braak, G. Hemke, M. Hessing, 2023-08-28 Microbial agents particularly bacteria represent the greatest risk to public health The traditional end product oriented food inspection systems are inadequate for identifying and eliminating the usually symptomless animal carriers of agents causing foodborne infections and intoxications Modern risk based prevention approaches are the only effective way to reduce the prevalence of these hazards from our foods As an additional safety valve microbial decontamination procedures are currently being suggested and its implementation in industrial food processing has at least in some parts of the world met with governmental approval The residues in foods of some non microbial agents have more recently also caused substantial consumer disquiet This equally applies to non conventional foods containing GMOs In this publication these issues are addressed by invited expert scientists from various disciplines many of which have key positions in EU funded research programmes on these very topics and or are advisers to international public health bodies The editors firmly believe that the very nature of the theme the excellence of the papers and the holistic approach chosen will draw an audience from both an industry and academic background

Avian Gut Function in Health and Disease, 2006 Derived from the 28th Poultry Science Symposium of the World's Poultry Science Association UK this book focuses on the current interest of the phasing out of antibiotic use in poultry and covers in depth interactions between the bird its diet and potential pathogens It also demonstrates the understanding of the gut health in the 21st century of commercial poultry and flocks and the ultimate safety of poultry product in the human food chain

Feed evaluation P.J. Moughan, M.W.A. Verstegen, M.I. Visser-Reyneveld, 2000-11-22 The provision of balanced diets accounts for the major cost in intensive livestock production and to maximise profits requires continuous improvement in all aspects of dietary formulation Consequently throughout the world considerable scientific effort is devoted to bringing about a better description of the nutrient content of diverse feedstuffs to understanding the mode of action of anti nutritional factors to improving the description of nutrient requirements and to developing refined technologies for feed formulation processing and provision Feed evaluation science is a rapidly developing high technology field with feed compounders nutritionists advisors and producers needing to keep abreast of rapid innovation This text written by a team of international authorities covers basic principles and new developments in feed evaluation for simple stomached animals with an emphasis on pigs and poultry The topics of nutrient analysis and characterisation nutrient bioavailability post absorptive nutrient utilisation modern approaches to the estimation of nutrient requirements including growth modelling are all covered in depth Recent advances in feed evaluation for pigs poultry and companion animals are highlighted The work is essential reading for anyone needing to remain at the forefront of technological developments in feed evaluation
