Recent Advances In Schizophrenia:

Recent Advances in Schizophrenia Anthony Kales, Costas N. Stefanis, John A. Talbott, 2012-12-06 I am honored to introduce readers to this extraordinary volume the first in the annual International Perspectives Series Psychiatry Psychology and Neurosciences This particular volume on the Recent Advances In Schizophrenia stems from the Third Annual Pennsylvania Conference on Schizophrenia held in March 1988 At that international meeting some of the most esteemed researchers in the field surveyed our current understanding of schizophrenia Collectively their presentations capture the excitement of a research field launching into a stage of rapid worldwide advancement The last decade has seen an enormous refocusing of scientific effort on schizophrenia directed in large measure by the National Institute of Mental Health NIMH Our understanding of this mysterious disabling disorder in all its diversity has been enhanced by a host of technologies including new neuroimaging techniques cognitive psychology molecular genetics and anatomical biochemical and molecular neuropathology The resulting growth spurt in our knowledge constitutes the essence of the conference and of this volume As the following pages amply document it has been a decade of great progress one in which we can take great pride The science of our field has matured to the point that a major research thrust is now feasible one likely to have enormous benefits for schizophrenic patients and their families It is a very exciting time to be in this field and to participate in accelerating its advances

Recent Advances in Psychiatry from Psycho-Neuro-Immunology Research: Autoimmunencephalitis, Autoimmune-Encephalopathy, Mild Encephalitis Karl Bechter, David Brown, Souhel Najjar, 2019-08-12 Growing evidence derived from cerebrospinal fluid CSF neuropathological imaging genetic and epidemiological studies link neuroinflammation and immune dysregulation to a subset of individuals with a variety of severe mental disorders SMDs including affective and non affective psychotic disorders Further the recent discoveries of neuronal surface antibodies NSAs in autoimmune encephalitis AE presenting with diverse neuropsychiatric disorders such as psychosis and cognitive decline among many others provides further support to the notion that CNS autoimmunity and neuroinflammation can contribute to the neurobiology of psychiatric disturbances Further these immune mechanisms may contribute to a subset of patients currently diagnosed as having treatment resistant SMDs such as schizophrenia and major depressive disorder Additionally mounting data indicate that various infections can serve as an immunological trigger of aberrant immune responses presumably by causing release of excess neural antigen thereby giving rise to NSAs or aberrant immune cellular responses to give rise to primary or secondary psychiatric disorders such as schizophrenia and those associated with AE respectively Collectively these findings support the mild encephalitis hypothesis of SMD The significant overlap among AE associated psychosis systemic autoimmune disorder associated psychosis and psychotic disorders associated with pathological processes involving inflammation and immune dysregulation has also prompted some authors to adopt the term autoimmune psychosis AP This term reflects that this psychosis subtype is mechanistically linked to complex neuroimmune and inflammatory signalling

abnormalities that can be responsive to early immunomodulatory treatment. It also suggests that a subset of AP might represent an incomplete or forme fruste subtype of AE presenting with dominant or pure psychiatric symptoms mimicking primary psychiatric illnesses. Because data indicate that delayed diagnosis and treatment may lead to permanent sequelae, early recognition of AP utilizing neurodiagnostic workup (e.g., CSF analysis, neuroimaging, and EEG) and its early treatment with appropriate immunotherapy are paramount to a meaningful recovery. This eBook will provide an overview of the current knowledge and research areas from epidemiology, risk factors, and diagnosis to the management of these conditions in this rapidly emerging field, helping to bridge the gaps in knowledge that currently exist in the disciplines of Psychiatry, Neurology, and Neuroimmunology.
