Receptors and recognition Pedro Cuatrecasas, Melvyn F. Greaves, 1976 Receptors and Recognition P. Cuatrecasas, 1978 **Receptors and Recognition** Pedro Cuatrecasas, Melvyn F. Greaves, 1977 **Receptors and Recognition** P. Cuatrecasas, M. F. Greaves, 2014-09-01 **Receptors and Recognition** P. CUATRECASAS AND M. F. GREAVES, 2014-01-23 **Receptors and Recognition** P. Cuatrecasas, M. F. Greaves, 2013-11-21 This new series is concerned with intercellular communication and recognition. It is now widely appreciated that these processes play a crucial role in virtually all biological systems and functions. These encompass fertilisation, embryonic development, infectious interactions, the activity of the nervous system, the regulation of growth and development by hormones, and the immune response to foreign or non self antigens. Historically, as described in the first review in this volume, the general concept of cell associated receptors as the molecular entity primarily responsible for the specificity of signal recognition arose independently in the fields of immunology, pharmacology and developmental biology. From an early stage the analogy between cellular recognition and the discriminatory activity of antibodies and enzymes was emphasised. A vital conceptual advance expressed most clearly by Linus Pauling and Paul Weiss was the idea that non covalent molecular interactions of proteins in particular were responsible for biological specificity in general. In the last decade several major advances have led to a new level of understanding of the molecular basis of cellular recognition. In several systems in particular with neurotransmitters, hormones and antigens it is possible to directly demonstrate the existence of receptors associated in each case with the cell surface. These studies have been paralleled by equally important insights into the general structure and organisation of cell membranes and the possible ways in which signals arriving from the outside can be transduced across the cell surface membrane to induce or regulate the cell's programmed responses. **Receptors and Recognition**, 1980

Receptors in the Nervous System Abel Lajtha, 2013-06-29 A major advance in the biological sciences in the past decade has been the biochemical identification of cell membrane receptors. The existence of receptor substances on the surface of cells that recognize and bind to extracellular molecules was proposed at the beginning of the century by the pharmacologist and immunologist Paul Ehrlich and the physiologist J N Langley. Since then receptors have been found to play an important role in numerous physiological and pathological processes. Over the years many attempts have been made to physically isolate and chemically characterize receptors but because of the receptors' extremely low concentration and membrane localization these efforts have met with limited success. Yet despite the failure to characterize receptor substances the concept of the presence of such molecules has had considerable heuristic value. Using pharmacological, physiological and immunologic approaches researchers have identified several specific receptors e.g. α and adrenergic, nicotinic and muscarinic, cholinergic and histaminergic. With the characterization of various types of receptors on cell membranes many drugs were developed that proved to be experimentally and therapeutically useful. It was only in the early 1970s that methods for the

specific measurement chemical characterization and physical isolation of cell membrane receptors were developed These advances were made possible by the availability of ligands with high specific radioactivity that retained their biological activity and of experimental procedures that differentiated between specific and non specific binding of ligands

Receptors and Recognition Pedro Cuatrecasas,1978 Receptors and Recognition Pedro Cuatrecasas,M. F. Greaves,1976 **The Receptors** P. Michael Conn,2014-05-10 The Receptors Volume IV deals with receptors for intracellular hormones estrogen and sex steroids as well as for dopamine cholecystokinin and corticotropin The role of surface recognition receptors in disease is also discussed along with receptors for plant auxin action and auxin transport Comprised of 11 chapters this volume begins with a detailed account of the adrenergic receptor coupled adenylate cyclase and the reconstitution of the functional interactions of its various purified components The discussion then turns to the mechanism of action of steroid and thyroid hormones and how abnormalities in their receptors lead to disease nuclear location of estrogen receptors and the biochemistry of the fungal sex steroid receptors as well as the use of *Achlya* as a model system for the study of the mechanism of action of steroid hormones in general Subsequent chapters focus on dopamine receptors cholecystokinin receptor corticotropin receptors and the search for receptors that mediate sweetness The book concludes with an analysis of endocrine receptors on lymphocytes and the integration of endocrine and immune systems with emphasis on large granular lymphocytes This monograph will be a valuable resource for students and practitioners in fields ranging from cell biology and biochemistry to physiology endocrinology and pharmacology

Receptors and recognition Geoffrey ed Burnstock,1981 Receptors Clare Stanford,Roger W. Horton,2001 Given the number of exciting developments across the whole spectrum of receptor research in recent years the editors have not restricted themselves to one particular approach or class of receptors Thus the studies within range from G protein coupled surface receptors to the delivery of antisense DNA inside living cell systems A distinguished team of contributors cover these diverse areas identifying any difficulties likely to be encountered and appropriate steps to overcome them Wherever appropriate the theoretical basis of each topic is explained first so that the results emerging from the practical procedures can be fully understood Anyone with an interest in receptor structure and function will find this book an invaluable resource

Biochemical Studies of CNS Receptors Leslie Iversen,2013-06-29 It is now eight years since the first Handbook volumes on Basic Neuro pharmacology were published and there have been many important advances As in many other areas in science progress in this field has depended to a considerable extent on the availability of new experimental methods and Volume 15 reviews some major recent developments including new autoradiographic techniques that allow direct visualization of drug and transmitter receptors in the nervous system and the pin pointing of the precise locations of the changes in brain metabolism elicited by various drug treatments Volume 16 and 17 cover two of the most active areas for basic research in psychopharmacology at the moment the characterization of drug and transmitter receptors in brain by

radioligand binding techniques and studies of the role of small peptides in brain function The latter area in particular illustrates how rapidly progress continues to be made in basic research on the mechanisms of chemical communication within the nervous system Eight years ago when the Handbook first appeared none of the opioid peptides enkephalins and endorphins had yet been identified Since then a whole new area of basic biological research has focused on these substances and in addition we know of more than thirty other neuropeptides with putative eNS transmitter functions **The**

Molecular Pathology of Autoimmune Diseases Argyrios N Theofilopoulos, Constantin A. Bona, 2002-12-06 Remarkable advances have been made in the pathogenesis of autoimmunity such as with bone marrow transplantation which is becoming a powerful strategy in treating certain life threatening diseases The Molecular Pathology of Autoimmune Diseases is a concise and centralized resource for information on the topic with a special focus on the molecular *Growth Factors,*

Peptides, and Receptors Terry W. Moody, 2012-12-06 The Twelfth Annual Washington Spring Symposium on Health Sciences attracted over 300 scientists from 20 countries It was held at the Lisner Auditorium of the George Washington University in Washington D C during June 1-5 1992 The theme of the meeting was Growth Factors Peptides and Receptors and speakers emphasized both basic and clinical research in these areas The seven plenary sessions emphasized Peptides Growth Factors Peptide Receptors Growth Factor Receptors Second Messengers Proliferation and Clinical Correlations The chapters in this volume are derived from each of these scientific sessions plus the poster and special sessions The Abraham White Distinguished Scientist Award was presented to Dr Solomon H Snyder for his numerous contributions to the field of neurochemistry He presented the keynote address Nitric Oxide A Novel Neuronal Messenger Dr Snyder discussed the pathway of nitric oxide NO synthesis by the enzyme NO synthase Released NO may be responsible for the neuronal toxicity associated with NMDA an excitatory amino acid analogue Dr Snyder noted that NO may be the first of a new class of transmitters with carbon monoxide being another candidate The Distinguished Public Service Award was presented to Senator Fritz Hollings in of his leadership and outstanding achievements in the United States Senate recognition and for his legislative support for biomedical research and education In the symposium banquet address Senator Hollings stressed the need for continued support of research to combat serious diseases such as cancer **Molecular Basis of NK Cell**

Recognition and Function L. Moretta, 1996 Natural killer NK cells have been the subject of intense investigation Only in recent years however could the molecular mechanisms by which they lyse tumor or virus infected cells but spare normal cells be elucidated NK cells express different specialized receptors NK R specific for major histocompatibility complex MHC class I molecules These MHC molecules exert an inhibitory effect on NK cells i e lack of expression of one or more MHC class I alleles a common event in tumor or virus infected cells leads to NK mediated target cell lysis Recently NK type receptors have also been identified in a subset of T lymphocytes MHC NK R interaction causes inhibition of T cell activation and functions an observation which suggests a role for these receptors in the negative control of T cell responses This volume

offers a complete and updated review of the signal transduction and functions of NK cells as well as their roles in transplantation anti tumor response and infectious diseases Written by experienced investigators who have contributed significantly to progress in the field this collection of reviews will be a valuable resource for basic and clinical immunologists hematologists oncologists and virologists Schaechter's Mechanisms of Microbial Disease ,2012-05-15 Schaechter s Mechanisms of Microbial Disease provides students with a thorough understanding of microbial agents and the pathophysiology of microbial diseases The text is universally praised for telling the story of a pathogen in an engaging way facilitating learning and recall by emphasizing unifying principles and paradigms rather than forcing students to memorize isolated facts by rote The table of contents is uniquely organized by microbial class and by organ system making it equally at home in traditional and systems based curricula Case studies with problem solving questions give students insight into clinical applications of microbiology which is ideal for problem based learning **Biomedical Index to PHS-supported Research: pt. A. Subject access A-H** ,1992 **Chemoattractant Ligands and Their Receptors** Richard Horuk,2020-01-31 Chemoattractant Ligands and Their Receptors succinctly summarizes cutting edge research in the important area of chemoattraction in immunology It explains how chemoattractant molecules mobilize immune cells to ward off attack by invading pathogens both at a molecular and at a cellular level Written by acknowledged experts in the field it contains detailed molecular and structural information on each of the major chemoattractants and their receptors Its unique multidisciplinary approach encompasses biology immunology protein chemistry and molecular biology A time saving reference for both researchers and students
