Engineering Ulf Wickström, 2016-05-25 This book provides a consistent scientific background to engineering calculation methods applicable to analyses of materials reaction to fire as well as fire resistance of structures Several new and unique formulas and diagrams which facilitate calculations are presented It focuses on problems involving high temperature conditions and in particular defines boundary conditions in a suitable way for calculations A large portion of the book is devoted to boundary conditions and measurements of thermal exposure by radiation and convection The concepts and theories of adiabatic surface temperature and measurements of temperature with plate thermometers are thoroughly explained Also presented is a renewed method for modeling compartment fires with the resulting simple and accurate prediction tools for both pre and post flashover fires The final chapters deal with temperature calculations in steel concrete and timber structures exposed to standard time temperature fire curves Useful temperature calculation tools are included and several examples demonstrate how the finite element code TASEF can be used to calculate temperature in various configurations Temperature Calculation in Fire Safety Engineering is intended for researchers students teachers and consultants in fire safety engineering It is also suitable for others interested in analyzing and understanding fire fire dynamics and temperature development Review questions and exercises are provided for instructor use Human Thermal Environments Ken Parsons, 2007-03-22 Our responses to our thermal environment have a considerable effect on our performance and behavior not least in the realm of work There has been considerable scientific investigation of these responses and formal methods have been developed for environmental evaluation and design In recent years these have been developed to the extent that detailed national and international standards of practice have now become feasible This new edition of Ken Parson s definitive text brings us back up to date He covers hot moderate and cold environments and defines these in terms of six basic parameters air temperature radiate temperature humidity air velocity clothing worn and the person s activity There is a focus on the principles and practice of human response which incorporates psychology physiology and environmental physics with applied ergonomics Water requirements computer modeling and computer aided design are brought in as are current standards Special populations such as the aged or disabled and specialist environments such as those found in vehicles are also considered This book continues to be the standard text for the design of environments for humans to live and work safely comfortably and effectively and for the design of materials which help the same people cope with their environments **Sensors and Measurement Systems** Walter Lang, 2022-09-01 Sensors and measurement systems is an introduction to microsensors for engineering students in the final undergraduate or early graduate level technicians who wants to know more about the systems they are using and anybody curious enough to know what microsystems and microsensors can do The book discusses five families of sensors Thermal sensors Force and pressure sensors Inertial sensors Magnetic field sensors Flow sensors For each sensor theoretical technology and application aspects are examined The sensor function is modelled to understand sensitivity resolution and noise We ask ourselves What do we

want to measure What are possible applications How are the sensor chips made in the cleanroom How are they mounted and integrated in a system After reading this book you should be able to Understand important thermal mechanical inertial and magnetic sensors Work with characterization parameters for sensors Choose sensors for a given application and apply them Understand micromachining technologies for sensors *Mathematical Simulation in Glass Technology* Dieter Krause, Horst Loch, 2002-07-23 This is the first book on mathematical simulation on glass technology and covers all production steps of special glass manufacturing The enclosed CD ROM shows 27 simulations of different aspects such as surprising details of the pressing and casting process **Performance of Light Aircraft** John T. Lowry, 1999 Pilots aviation students kitplane builders aircraft fleet operators and aeronautical engineers can all determine how their propeller driven airplanes will perform under any conditions by using the step by step bootstrap approach introduced in this book A few routine flying manoeuvres climbs glides a level speed run will give the necessary nine numbers High school level calculations then give performance numbers with much greater detail and accuracy than many other methods for the reader's individual aircraft

Low-cost Physics Experiments Using New Technologies Salvador Gil, 2024-05-28 This book presents a set of low cost physics experiments making use of the new technologies available data collection and analysis systems by computers Internet video commercial electronics smartphones etc while highlighting the methodological aspects of physics and science in general The projects are aimed at university students of science and engineering although some may be used in high schools The experiments would enable students to answer the questions How do we know this Why do we believe in that These questions illustrate the nature of scientific thinking process This book is complemented by the site www.fisicarecreativa.com where several of the projects presented here were carried out by students from different universities We hope it can be used as an innovative STEM learning tools
