Modeling Bounded Rationality:

Modeling Bounded Rationality Ariel Rubinstein, 1998 The notion of bounded rationality was initiated in the 1950s by Herbert Simon only recently has it influenced mainstream economics In this book Ariel Rubinstein defines models of bounded rationality as those in which elements of the process of choice are explicitly embedded The book focuses on the challenges of modeling bounded rationality rather than on substantial economic implications In the first part of the book the author considers the modeling of choice After discussing some psychological findings he proceeds to the modeling of procedural rationality knowledge memory the choice of what to know and group decisions In the second part he discusses the fundamental difficulties of modeling bounded rationality in games He begins with the modeling of a game with procedural rational players and then surveys repeated games with complexity considerations He ends with a discussion of computability constraints in games The final chapter includes a critique by Herbert Simon of the author's methodology and the author's response The Zeuthen Lecture Book series is sponsored by the Institute of Economics at the University of Copenhagen

Models of Bounded Rationality and Mechanism Design Jacob Glazer, Ariel Rubinstein, 2016-08-22 This book brings together the authors' joint papers from over a period of more than twenty years The collection includes seven papers each of which presents a novel and rigorous model in Economic Theory All of the models are within the domain of implementation and mechanism design theories These theories attempt to explain how incentive schemes and organizations can be designed with the goal of inducing agents to behave according to the designer's principal's objectives Most of the literature assumes that agents are fully rational In contrast the authors inject into each model an element which conflicts with the standard notion of full rationality demonstrating how such elements can dramatically change the mechanism design problem Although all of the models presented in this volume touch on mechanism design issues it is the formal modeling of bounded rationality that the authors are most interested in A model of bounded rationality signifies a model that contains a procedural element of reasoning that is not consistent with full rationality Rather than looking for a canonical model of bounded rationality the articles introduce a variety of modeling devices that will capture procedural elements not previously considered and which alter the analysis of the model The book is a journey into the modeling of bounded rationality It is a collection of modeling ideas rather than a general alternative theory of implementation

Models of Bounded Rationality: Empirically grounded economic reason Herbert Alexander Simon, 1997 Offering alternative models based on such concepts as satisficing acceptance of viable choices that may not be the undiscoverable optimum and bounded rationality the limited extent to which rational calculation can direct human behaviour Simon shows why more empirical research based on experiments and direct observation rather than just statistical analysis of economic aggregates is needed

course of a long and distinguished career in the social and behavioral sciences made lasting contributions to many disciplines including economics psychology computer science and artificial intelligence In 1978 he was awarded the Nobel Prize in economics for his research into the decision making process within economic organizations His well known book *The Sciences of the Artificial* addresses the implications of the decision making and problem solving processes for the social sciences This book the title is a variation on the title of Simon's autobiography *Models of My Life* is a collection of short essays all original by colleagues from many fields who felt Simon's influence and mourn his loss Mixing reminiscence and analysis the book represents a small acknowledgment of a large debt Each of the more than forty contributors was asked to write about the one work by Simon that he or she had found most influential The editors then grouped the essays into four sections Modeling Man Organizations and Administration Modeling Systems and Minds and Machines The contributors include such prominent figures as Kenneth Arrow William Baumol William Cooper Gerd Gigerenzer Daniel Kahneman David Klahr Franco Modigliani Paul Samuelson and Vernon Smith Although they consider topics as disparate as Is Bounded Rationality Unboundedly Rational and Personal Recollections from 15 Years of Monthly Meetings each essay is a testament to the legacy of Herbert Simon to see the unity rather than the divergences among disciplines

Toward Behavioral Transaction Cost Economics George Z. Peng, 2020-10-26 Adopting a critical realist position this book renders transaction cost economics TCE into a behavioral theory of organizational decision making by foregrounding psychological processes and introducing and integrating with effectuation theory Consistent with its behavioral agenda the book introduces the concept of uncertainty controllability and provides a clearer conceptualization and a novel modeling strategy of bounded rationality based on the conceptual separation of cognitive bounds from psychological rationalizing The book inspires new insights into the significance of cultural distance CD Based on the understanding that culture is socially extended cognition the author re conceptualizes CD as reflecting cognitive bounds and uses the biases arising from CD to contextualize effectuation and deepen the flat ontology of both TCE and effectuation theory The book presents a full two sided behavioral framework of organizational decision making with behavioral TCE and behavioral real options theory complementing each other to complete the full behavioral picture Both sides are further linked to organizational learning which reduces biases over time and thus drives governance structures toward more rational directions The full framework uses prospect theory as the overarching theory that determines which side of the behavioral framework is relevant for the uncertainty of concern based on the different problem frames resulting from different degrees of uncertainty controllability Because effectuation can take place on both sides of the framework based on competing risk logics prospect theory serves to harmonize inconsistencies in the effectuation literature as a side note This book applies the behavioral TCE side of the framework to the study of MNC subsidiary ownership decision making process using a dataset of over 10 000 Japanese subsidiaries founded in 43 host countries It concludes with a discussion of implications and future directions for TCE in general and international business in

The Foundations of Positive and Normative Economics Andrew Caplin, Andrew Schotter, 2010-06-25 The Foundations of Positive and Normative Economics A Handbook is the first book in a new series by Andrew Caplin and Andrew Schotter There is currently no guide available on the rapidly changing methodological frontiers of the field of economics Economists have been introducing new theories and new sources of data at a remarkable rate in recent years and there are widely divergent views both on how productive these expansions have been in the past and how best to make progress in the future The speed of these changes has left economists ill at ease and has created a backlash against new methods The series will debate these critical issues allowing proponents of a particular research method to present proposals in a safe yet critical context with alternatives being clarified This first volume written by some of the most prominent researchers in the discipline reflects the challenges that are opened by new research opportunities The goal of the current volume and the series it presages is to formally open a dialog on methodology The editors conviction is that such a debate will rebound to the benefit of social science in general and economics in particular The issues under discussion strike to the very heart of the social scientific enterprise This work is of tremendous importance to all who are interested in the contributions that academic research can make not only to our scientific understanding but also to matters of policy
