is different from any other book that has looked at haptics The authors treat haptics as a new medium rather than just a domain within one of the above areas They describe human haptic perception and interfaces and present fundamentals in haptic rendering and modeling in virtual environments Diverse software architectures for standalone and networked haptic systems are explained and the authors demonstrate the vast application spectrum of this emerging technology along with its accompanying trends The primary objective is to provide a comprehensive overview and a practical understanding of haptic technologies An appreciation of the close relationship between the wide range of disciplines that constitute a haptic system is a key principle towards being able to build successful collaborative haptic environments Structured as a reference to allow for fast accommodation of the issues concerned this book is intended for researchers interested in studying touch and force feedback for use in technological multimedia systems in computer science electrical engineering or other related disciplines With its novel approach it paves the way for exploring research trends and challenges in such fields as interpersonal communication games or military applications
