Two-dimensional Flow Modeling Robert C. MacArthur, D. Michael Gee, Arlen D. Feldman, 1982

Animal Models in Psychiatry, I Alan A. Boulton, Glen B. Baker, Mathew T. Martin-Iverson, 1991-08-20 The two Animal Models in Psychiatry volumes are loosely organized by subject. The first volume contains a number of chapters concerned with schizophrenia, psychotic, neuroleptic induced tardive dyskinesias and other disorders that may involve dopamine such as attention deficit disorder and mania. The second volume deals with affective and anxiety disorders but also includes chapters on subjects not easily classified as either psychotic or affective or an ety related such as aggression, mental retardation and memory disorders. Four chapters on animal models of schizophrenia or psychoses are included in the present volume because of the importance of these disorders in psychiatry. Likewise, three chapters in the subsequent volume deal with depression. The first of the two volumes begins with an introduction by Paul Willner reviewing the criteria for assessing the validity of animal models in psychiatry. He has written extensively on this subject and his thorough description of the issues of various forms of validity provides a framework in which to evaluate the subsequent chapters. As will be seen, the remaining chapters in both volumes will refer frequently to these issues. The second chapter by Melvin Lyon describes a large number of different procedures that have been proposed as potential animal models of schizophrenia. This is a departure from the usual format consisting of detailed descriptions of specific models.

Optimization Models in a Transition Economy Ivan V. Sergienko, Mikhail Mikhalevich, Ludmilla Koshlai, 2014-12-11 This book opens new avenues in understanding mathematical models within the context of a transition economy. The exposition lays out the methods for combining different mathematical structures and tools to effectively build the next model that will accurately reflect real world economic processes. Mathematical modeling of weather phenomena allows us to forecast certain essential weather parameters without any possibility of changing them. By contrast, modeling of transition economies gives us the freedom to not only predict changes in important indexes of all types of economies but also to influence them more effectively in the desired direction. Simply put, any economy including a transitional one can be controlled. This book is useful to anyone who wants to increase profits within their business or improve the quality of their family life and the economic area they live in. It is beneficial for undergraduate and graduate students specializing in the fields of Economic Informatics, Economic Cybernetics, Applied Mathematics and Large Information Systems as well as for professional economists and employees of state planning and statistical organizations.

Interest Rate Models, Asset Allocation and Quantitative Techniques for Central Banks and Sovereign Wealth Funds A. Berkelaar, J. Coche, K. Nyholm, 2009-11-30 This edited volume contains essential readings for financial analysts and market practitioners working at Central Banks and Sovereign Wealth Funds. It presents the reader with state of the art methods that are directly implementable and industry best practices as followed by

leading institutions in their field **Hybrid Energy System Models** Asmae Berrada,Rachid El Mrabet,2020-11-21 Hybrid Energy System Models presents a number of techniques to model a large variety of hybrid energy systems in all aspects of sizing design operation economic dispatch optimization and control The book s authors present a number of new methods to model hybrid energy systems and several renewable energy systems including photovoltaic solar plus wind and hydropower energy storage and combined heat and power systems With critical modeling examples global case studies and techno economic modeling integrated in every chapter this book is essential to understanding the development of affordable energy systems globally particularly from renewable resources With a detailed overview and a comparison of hybrid energy systems used in different regions as well as innovative hybrid energy system designs covered this book is useful for practicing power and energy engineers needing answers for what factors to consider when modeling a hybrid energy system and what tools are available to model hybrid systems Combines research on several renewable energy systems energy storage and combined heat and power systems into a single informative resource on hybrid energy systems Includes significant global case studies of current and novel modeling techniques for comparison Covers numerical simulations of hybrid systems energy modeling and applications **Deep Learning for Coders with fastai and PyTorch** Jeremy Howard,Sylvain Gugger,2020-06-29 Deep learning is often viewed as the exclusive domain of math PhDs and big tech companies But as this hands on guide demonstrates programmers comfortable with Python can achieve impressive results in deep learning with little math background small amounts of data and minimal code How With fastai the first library to provide a consistent interface to the most frequently used deep learning applications Authors Jeremy Howard and Sylvain Gugger the creators of fastai show you how to train a model on a wide range of tasks using fastai and PyTorch You ll also dive progressively further into deep learning theory to gain a complete understanding of the algorithms behind the scenes Train models in computer vision natural language processing tabular data and collaborative filtering Learn the latest deep learning techniques that matter most in practice Improve accuracy speed and reliability by understanding how deep learning models work Discover how to turn your models into web applications Implement deep learning algorithms from scratch Consider the ethical implications of your work Gain insight from the foreword by PyTorch cofounder Soumith Chintala **Methanol** Angelo Basile,Francesco Dalena,2017-10-31 Methanol Science and Engineering provides a comprehensive review of the chemistry properties and current and potential uses and applications of methanol Divided into four parts the book begins with a detailed account of current production methods and their economics The second part deals with the applications of methanol providing useful insights into future applications Modeling of the various reactor systems is covered in the next section with final discussions in the book focusing on the economic and environmental impact of this chemical Users will find this to be a must have resource for all researchers and engineers studying alternative energy sources Provides the latest developments on methanol research Reviews methanol production methods and their economics Outlines the use of methanol as an alternative green

Evaluating Corporate Training: Models and Issues Stephen M. Brown,Constance J. Seidner,2012-12-06 We are glad to have the opportunity to work together again in the planning and preparation of this edited volume on the evaluation of corporate training Our respective professional careers have provided us with experience in this area both as practitioners and as academicians It is from both of these perspectives that we approached the preparation of this volume Our purpose is to provide training professionals in business and industry and students of human resources development with an overview of current models and issues in educational evaluation The book is organized around three themes context models and issues The chapters in the context section are intended to provide the reader with an understanding of the social organizational and interpersonal factors that provide background and give meaning to evaluation practice The models section brings together contributions from some of the most influential thinkers and practitioners in the field The chapters in this section provide perspective on the dominant themes and emergent trends from individuals who have been and continue to be the drivers of those trends Contributions to the issues section highlight some pervasive themes as well as illuminate new areas of concern and interest that will affect how we assess learning interventions in the organizations of today and tomorrow *Cell Culture Models of Biological Barriers* Claus-Michael Lehr,2002-08-08 Over the past ten years several sophisticated in vitro test systems based on epithelial cell cultures have been introduced in the field of drug delivery These models have been found to be very useful in characterizing the permeability of drugs across epithelial tissues and in studying formulations or carrier systems for improved drug delivery and **Reactive and Membrane-Assisted Separations** Philip Lutze,Andrzej Górak,2016-07-28 Process intensification aims for increasing efficiency and sustainability of bio chemical production processes This book presents strategies for improving fluid separation such as reactive distillation reactive absorption and membrane assisted separations The authors discuss computer simulation model development methodological approaches for synthesis and the design and scale up of final industrial processes Enhancing Architectural Drawings and Models with Photoshop Scott Onstott,2010-12-07 Transform your CAD drawings into powerful presentation This one of a kind book shows you how to use Photoshop to turn CAD drawings and BIM models into artistic presentations with captivating animations videos and dynamic 3D imagery The techniques apply to all leading architectural design software including AutoCAD Revit and 3ds Max Design Video tutorials on the DVD improve your learning curve and let you compare your work with the author s Turn CAD drawings and BIM models into powerful presentations featuring animation videos and 3D imagery for enhanced client appeal Craft interactive panoramas for your Web site add people and objects to your models and integrate 3D object models inside architectural interiors Build 3D models from photos and turn them into videos with AfterEffects add depth of

field and atmospheric effects to 3D models create stereographic images and much more See how it s done with the video tutorials on the DVD Take full advantage of Photoshop s power to present your architectural drawings in a new and exciting way

Old Industrial Cities Seeking New Road Of Industrialization: Models Of Revitalizing Northeast China Yanji Ma,Lianjun Tong,Pinyu Zhang,Zhiming Cheng,Mark Yoalin Wang,2013-11-22 This book aims to investigate how cities in China s rust belt restructure their urban industries and economies Over the years China s economic miracle has been mainly attributed to rapid development in its coastal region where the majority of research into the country s development has originated from Development in the rest of China seems to be attracting relatively scant research attention especially in China s rust belt In fact the urban industrial restructuring process is an ongoing process in inland China notably in the recent decade in terms of the scope scale and speed of restructuring The old industrial cities in northeast China Manchuria were the cradle of China s industrialization and had significantly contributed to the industrialization of the nation during the Mao era Deng s open door policy and economic reform disadvantaged the region and left it behind others In the context of market economy and competition from rapidly growing coastal areas northeast China became the burden to China s overall economic development With a high concentration of state owned heavy industries cities in this region suffered from heavy losses in revenue and massive layoffs of millions of former state owned enterprise workers known as the Northeast Phenomenon or Neo Northeast Phenomenon The once towering economic giant was down Such a phenomenon is not uncommon in other rust belt regions in industrialized economies However since the implementation of the Chinese Government s Revitalisation Strategy of Northeast China in 2003 cities in northeast China have gone through various transformations Their recent economic performance has made many Chinese economists predict that northeast China will become China s new growth engine and catch up with the economic performance of other prosperous regional economies such as the Pearl River Delta Lower Yangtze River Delta and Beijing Tianjin region This book investigates how cities in northeast China are shaking off their economic disadvantages and implementing various forms of restructuring in their industries The authors identify six different reindustrialization models namely Shenyang Tiexi Model repacking old industries Dalian Model beyond the China s coast development model Daqing Model extension of industrial chain Fuxin Model modern agro processing saved the coal mining city from ghost town Jilin city low carbon oriented model and Central Liaoning Urban Cluster Model negotiated agreed industrial division All these models will be explained through analysis of their approaches key actors and mechanisms

Heat and Mass Transfer Modelling During Drying

Mohammad U.H. Joardder,Washim Akram,Azharul Karim,2021-09-30 Most conventional dryers use random heating to dry diverse materials without considering their thermal sensitivity and energy requirements for drying Eventually excess energy

consumption is necessary to attain a low quality dried product Proper heat and mass transfer modelling prior to designing a drying system for selected food materials can overcome these problems Heat and Mass Transfer Modelling During Drying Empirical to Multiscale Approaches extensively discusses the issue of predicting energy consumption in terms of heat and mass transfer simulation A comprehensive mathematical model can help provide proper insight into the underlying transport phenomena within the materials during drying However drying of porous materials such as food is one of the most complex problems in the engineering field that is also multiscale in nature From the modelling perspective heat and mass transfer phenomena can be predicted using empirical to multiscale modelling However multiscale simulation methods can provide a comprehensive understanding of the physics of drying food materials KEY FEATURES Includes a detailed discussion on material properties that are relevant for drying phenomena Presents an in depth discussion on the underlying physics of drying using conceptual visual content Provides appropriate formulation of mathematical modelling from empirical to multiscale approaches Offers numerical solution approaches to mathematical models Presents possible challenges of different modelling strategies and potential solutions The objective of this book is to discuss the implementation of different modelling techniques ranging from empirical to multiscale in order to understand heat and mass transfer phenomena that take place during drying of porous materials including foods pharmaceutical products paper leather materials and more

Cockroaches as Models for Neurobiology: Applications in Biomedical Research Ivan Huber,2019-07-22 This unique book is written with the novice in mind providing an introduction to all aspects of working with cockroaches The focus of this writing is on the neuroendocrine system of cockroaches which was collected by entomologists primarily with the aim of improving methods of insect pest control It includes some chapters devoted exclusively to techniques with detailed instructions This comprehensive work also covers details of anatomy along with illustrations and experimental results This is one of the few books available which provides such a broad coverage of areas of neurobiology of one organism This handbook is a must for all researchers in the biomedical veterinary field Entomologists will find this reading exciting as well
