### **Composition Modulation of Catalytic Reactors**

P. L. Silvertown, 1998-11-26. Composition modulation is a method of operating a catalytic reactor to improve catalyst activity or selectivity and has been under study for more than 25 years. In the last few years, several commercial applications have been realized and more will certainly appear. A large international research literature now exists. This book examines this literature and attempts to organize and analyze it with the intent of identifying the magnitude of improvements possible, why modulation is effective and what questions remain unanswered. Topics include hydrogenation, oxidation, reduction and polymerization reactions for NO<sub>x</sub>, SO<sub>x</sub>, NH<sub>3</sub> and hydrocarbons.

**Handbook of Membrane Reactors** Angelo Basile, 2013-02-08. Membrane reactors are increasingly replacing conventional separation processes and conversion technologies across a wide range of applications. Exploiting advanced membrane materials, they offer enhanced efficiency, are very adaptable and have great economic potential. There has therefore been increasing interest in membrane reactors from both the scientific and industrial communities, stimulating research and development. The two volumes of the Handbook of Membrane Reactors draw on this research to provide an authoritative review of this important field.
