Econometrics of Macroeconomic Modelling Gunnar Bårdsen, Øyvind Eitrheim, Eilev Jansen, Ragnar Nymoen, 2005-04-14

Macroeconometric models in many ways the flagships of the economist's profession in the 1960s came under increasing attack from both theoretical economist and practitioners in the late 1970s Critics referred to their lack of microeconomic theoretical foundations ad hoc models of expectations lack of identification neglect of dynamics and non stationarity and poor forecasting properties By the start of the 1990s the status of macroeconometric models had declined markedly and had fallen completely out of and with academic economics Nevertheless unlike the dinosaurs to which they often have been likened macroeconometric models have never completely disappeared from the scene This book describes how and why the discipline of macroeconometric modelling continues to play a role for economic policymaking by adapting to changing demands in response for instance to new policy regimes like inflation targeting Model builders have adopted new insights from economic theory and taken advantage of the methodological and conceptual advances within time series econometrics over the last twenty years The modelling of wages and prices takes a central part in the book as the authors interpret and evaluate the last forty years of international research experience in the light of the Norwegian main course model of inflation in a small open economy The preferred model is a dynamic model of incomplete competition which is evaluated against alternatives as diverse as the Phillips curve Nickell Layard wage curves the New Keynesian Phillips curve and monetary inflation models on data from the Euro area the UK and Norway The wage price core model is built into a small econometric model for Norway to analyse the transmission mechanism and to evaluate monetary policy rules The final chapter explores the main sources of forecast failure likely to occur in a practical modelling situation using the large scale model RIMINI and the inflation models of earlier chapters as case studies *Macroeconomic Modelling, Economic Policy and Methodology*

Mikael Randrup Byrialsen, Hamid Raza, Finn Olesen, 2022-10-27 Demonstrating that there are superior alternatives to the modern macroeconomic mainstream and its DSGE dynamic stochastic general equilibrium models this book presents the cutting edge in macroeconomic modelling economic policy and methodology from the perspective of heterodox economic thinking The first part of the book explores methodological issues advocating for a stronger ethical consideration in macroeconomics and for the adoption of a strategy of pluralism to ensure that macroeconomic theory is capable of adapting to real world issues The second part highlights recent trends in empirical Stock Flow Consistent models by collecting a group

of the most well developed empirical models of five different economies the Danish the Dutch the French the Italian and the Argentinian models In all five cases the models are used to discuss various policy aspects of the individual economies Finally the book explores issues of macroeconomic policy which are largely neglected by mainstream economists including financial in stability and macro imbalances The book emphasizes the need for investigating sectoral balances which are crucial elements for investigating imbalances from the heterodox perspective This book will be of significant interest to students and scholars of macroeconomics economic modelling economic methodology and heterodox economics more broadly

Hendry, 2000-10-26 *Econometrics Alchemy or Science* analyses the effectiveness and validity of applying econometric methods to economic time series The methodological dispute is long standing and no claim can be made for a single valid method but recent results on the theory and practice of model selection bid fair to resolve many of the contentious issues The book presents criticisms and evaluations of competing approaches based on theoretical economic and econometric analyses empirical applications and Monte Carlo simulations which interact to determine best practice It explains the evolution of an approach to econometric modelling founded in careful statistical analyses of the available data using economic theory to guide the general model specification From a strong foundation in the theory of reduction via a range of applied and simulation studies it demonstrates that general to specific procedures have excellent properties The book is divided into four Parts Routes and Route Maps Empirical Modelling Strategies Formalization and Retrospect and Prospect A short preamble to each chapter sketches the salient themes links to earlier and later developments and the

lessons learnt or missed at the time A sequence of detailed empirical studies of consumers expenditure and money demand illustrate most facets of the approach Material new to this revised edition describes recent major advances in computer automated model selection embodied in the powerful new software program PcGets which establish the operational success of the modelling strategy

Theory and Implementation of Economic Models for Sustainable Development J.C. van den Bergh, M.W. Modelling Economic Capital David Jamieson Bolder, 2022-05-06 How might one determine if a financial institution is taking risk in a balanced and productive manner A powerful tool to address this question is economic capital which is a model based measure of the amount of equity

Econometric Business Cycle Research Jan Jacobs, 2012-12-06

Econometric Business Cycle Research deals with econometric business cycle research EBCR a term introduced by the Nobel laureate Jan Tinbergen for his econometric method of testing economic business cycle theories EBCR combines economic theory and measurement in the study of business cycles i e ups and downs in overall economic activity We assess four methods of EBCR business cycle indicators simultaneous equations models vector autoregressive systems and real business indicators After a sketch of the history of the methods we investigate whether the methods meet the goals of EBCR the three traditional ones description forecasting and policy evaluation and the one Tinbergen introduced the implementation testing of business cycles The first three EBCR methods are illustrated for the Netherlands a typical example of a small open economy The main conclusion of the book is that simultaneous equation models are the best vehicle for EBCR if all its goals are to be attained simultaneously This conclusion is based on a fairly detailed assessment of the methods and is not over

turned in the empirical illustrations The main conclusion does not imply the end of other EBCR methods Not all goals have to be met with a single vehicle other methods might serve the purpose equally well or even better For example if one is interested in business cycle forecasts one might prefer a business cycle indicator or vector autoregressive system A second conclusion is that many ideas concepts that play an important role in current discussions about econometric methodology in general and EBCR in particular were put forward in the 1930s and 1940s A third conclusion is that it is difficult if not impossible to compare the outcomes of RBC models to outcomes of the other three methods because RBC modellers are not interested in modelling business cycles on an observation per observation basis A more general conclusion in this respect is that methods should adopt the same concept of business cycles to make them comparable
