Maylor, 2000 This book offers an updated account of the latest methodological and theoretical issues in cognitive aging Part of the Debates in Psychology series it presents the arguments surrounding the currently controversial questions in cognitive aging What is the appropriate methodology for understanding cognitive change How many factors are necessary to understand the patterns of age related change What might these factors be The topics and arguments explored in a series of chapters by the leading researchers in the field and together they cover a broad range of cognitive functions including language use cognitive slowing and memory loss

Biology of Cognitive Aging: Model Systems, Technologies and beyond Shin Murakami, 2017-04-13 Welcome We humans tend to experience forgetfulness when we get old The forgetfulness may become more serious memory impairment dementia Presumably we have known it for a long time but we still do not know the mechanism behind A normal part of forgetfulness is called age related memory impairment AMI which is considered the first step towards mild cognitive impairment MCI transition state and dementia disease state The majority of dementia is attributable to Alzheimer s disease AD Progression to dementia occurs at a high rate in patients with AMI This eBook covers exciting but yet challenging field of cognitive aging AMI is specific to neural tissues of the brain and is considered to be segmental aging It happens not only to humans but also to a variety of species Learning and memory are vulnerable to aging in a wide variety of model species including worms fruit flies insects snails fishes and rodents Aging specifically reduces the ability to learn new information but leaves old memories and procedural memory intact A comparative approach including the use of model systems seems to facilitate understanding of the molecular mechanisms that lead to AMI and AD We advocate research on model systems This eBook also provides the first manuscript co authored with an AD patient to create a feedback loop from patients incorporated into research We also included a manuscript on the semi automated system that was inspired by such a feedback Those may place a nice flavor to this exciting series of comparative research on cognitive aging We hope you enjoy this eBook Warm regards Shin Murakami
