## **Models And Metaphors Studies In Language And Philosophy:**

*Models and Metaphors* Max Black, 2019-06-30 Although the range is wide philosophy of language logic philosophy of science in this collection of essays there is a certain unity of treatment arising from the author's steady interest in using linguistic analysis to cast some new light on old problems such as the nature of logic causation and induction

*Models and Metaphors* Max Black, *Models and Metaphors* Franklin K. Moore, 1962 Model and Metaphors, 1981 Rhetorics of Display Lawrence J. Prelli, 2021-12-24 Groundbreaking case studies mapping the rhetoric inherent in acts of presentation and concealment *Rhetorics of Display* is a pathbreaking volume that brings together a distinguished group of scholars to assess an increasingly pervasive form of rhetorical activity Editor Lawrence J Prelli notes in his introduction that twenty first century citizens continually confront displays of information and images from the verbal images of speeches and literature to visual images of film and photography to exhibits in museums to the arrangement of our homes to the merchandising of consumer goods The volume provides an integrated comprehensive study of the processes of selecting what to reveal and what to conceal that together constitute the rhetorics of display Surveying major historical transformations in the relationship between rhetoric and display this book also identifies the leading themes in relevant scholarship of the past three decades Seventeen case studies canvass a representative and diverse range of displays from body piercing to a civil rights memorial to a Titanic exhibition to imagery found in gambling casinos and examine the ways that phenomena persons places events identities communities and cultures are exhibited before audiences Collectively the contributors shed light on rhetorics that are nearly ubiquitous in contemporary communication and culture

*Metaphors in Medical Texts* Geraldine W. van Rijn-van Tongeren, 1997 This book claims that metaphors must be seen as indispensable cognitive and communicative instruments in medical science Analysis of texts taken from recently published medical handbooks reveals what kind of metaphors are used to structure certain medical concepts and what the functions are of the metaphorical expressions in the texts Special attention is drawn to the idea that scientific facts do not originate from passive observation of reality Imaginative thinking and the use of metaphors are required to make the unknown accessible to us Yet although metaphors are often a sine qua non for the genesis of a scientific fact they may also inhibit the development of alternative views This is due to the fact that metaphors always highlight certain aspects of a phenomenon while other aspects remain obscured Analysis of the metaphors used in medical texts may reveal exactly which aspects are highlighted and which remain hidden and may thus help to find alternative metaphors and possibly therapies when current metaphors are no longer adequate This book should be of interest not only to linguists translators and researchers working in the field of intercultural communication but also to doctors and medical scientists and those interested in the philosophy of science

**Mary B. Hesse (1924-2016): Metaphors, Models, and the Growth of Scientific Knowledge** Pietro Gori, 2025-08-20 This volume explores the work of Mary B Hesse 1924 2016 a pivotal figure in twentieth century philosophy of science At a time when the

foundations of an integrated approach to the history and philosophy of science were being established Hesse as a female philosopher offered a distinctive and influential contribution grounded in a post empiricist understanding of the natural sciences Central to her thought was a focus on the metaphorical and analogical value of scientific language in contrast to views assessing its literal significance Hesse also departed from traditional hypothetico deductive accounts of scientific methodology and theory structure advancing instead perspectives rooted in both historical and contemporary scientific practices To mark the centenary of her birth this book brings together an international group of scholars to re examine and engage with Hesse s intellectual legacy The chapters address the central themes of her work and situate them within her broader philosophical context Each contribution adopts a cross disciplinary perspective highlighting the continued relevance of Hesse s ideas to current debates in the philosophy of science This volume will be of particular interest to scholars in the history and philosophy of science as well as those engaged in gender studies and the study of women in philosophy

Hofmann, 2009-07-31 Biobanking i.e. storage of biological samples or data emerging from such samples for diagnostic therapeutic or research purposes has been going on for decades However it is only since the mid 1990s that these activities have become the subject of considerable public attention concern and debate This shift in climate is due to several factors The purpose of this book is to investigate some of the ethical legal and social challenges raised by research biobanking in its different modern forms and formats The issues raised by research biobanking in its modern form can be divided into four main clusters how biological materials are entered into the bank research biobanks as institutions under what conditions researchers can access materials in the bank and problems concerning ownership of biological materials and of intellectual property arising from such materials and how the information is collected and stored e.g. access rights disclosure confidentiality data security and data protection *Normative Structures of the Social World*, 2021-11-15 *A Nice*

*Derangement of Epistemes* John H. Zammito, 2004-02-15 Since the 1950s many philosophers of science have attacked positivism the theory that scientific knowledge is grounded in objective reality Reconstructing the history of these critiques John H. Zammito argues that while so called postpositivist theories of science are very often invoked they actually provide little support for fashionable postmodern approaches to science studies Zammito shows how problems that Quine and Kuhn saw in the philosophy of the natural sciences inspired a turn to the philosophy of language for resolution This linguistic turn led to claims that science needs to be situated in both historical and social contexts but the claims of recent science studies only deepened the philosophical quandary In essence Zammito argues that none of the problems with positivism provides the slightest justification for denigrating empirical inquiry and scientific practice delivering quite a blow to the discipline

analysis of a concept that has the capability to capture a dynamic global economy with entrepreneurial innovation at the crux of its future development. It addresses wider issues concerning the evolution of new forms of industrial organisation. The book develops an agenda and understanding that aims to build upon the early explosion of interest within academic policy and practice circles by providing new and important insights that contribute to knowledge, direct future investigations and to increase the effectiveness of research based policy and practice. **Entrepreneurial Ecosystems in Cities and Regions** builds a framework for establishing a robust and sustainable concept that can help propel an understanding of how cities and regions around the world can use entrepreneurship and innovation as a catalyst for their future economic, social and environmental development. The volume highlights the need to account for urban and regional contextual factors when determining the strength or otherwise of entrepreneurial ecosystems and illustrates that these factors can lead to the development of entrepreneurial activity of quite a different nature across cities and regions.

**Handbook of Empirical Literary Studies** Donald Kuiken, Arthur M. Jacobs, 2021-09-20. This handbook reviews efforts to increase the use of empirical methods in studies of the aesthetic and social effects of literary reading. The reviewed research is expansive, including extension of familiar theoretical models to novel domains, e.g. educational settings, enlarging empirical efforts within under-represented research areas, e.g. child development, and broadening the range of applicable quantitative and qualitative methods, e.g. computational stylistics, phenomenological methods. Especially challenging is articulation of the subtle aesthetic and social effects of literary artefacts, e.g. poetry, film. Increasingly, the complexity of these effects is addressed in multi-variate studies including confirmatory factor analysis and structural equation modeling. While each chapter touches upon the historical background of a specific research topic, two chapters address the area's historical background and guiding philosophical assumptions. Taken together, the material in this volume provides a systematic introduction to the area for early career professionals while challenging active researchers to develop theoretical frameworks and empirical procedures that match the complexity of their research objectives.
