English in China Emily Tsz Yan Fong, 2021-03-29 This

volume explores Chinese identity through the lens of both the Chinese and English languages. Until the twentieth century, English was a language associated with capitalists and military aggressors in China. However, the massive progression of globalisation in China following the 1980s has transformed the language into an important tool for China's modernisation. Regardless of the role English plays in China, there has always been a fear that the spread of culture associated with English would lead to weakening of the Chinese identity. This fear resulted in the development of the *ti yong* principle: Chinese learning for essence (*ti*), Western learning for utility (*yong*). Fong's book aims to enhance understanding of the *ti yong* dichotomy in relation to people's sense of being Chinese in China, the penetration of English into non-English speaking societies, the resultant tensions in people's sense of personal and national identity and their place in the world. Using Q methodology, the book presents observations based on data collected from four participant groups: namely, high school and university students, teachers and parents in China, to investigate their perspectives on the status and roles of English as well as those of Chinese. Considering the growing international interest in China, this volume will appeal to readers interested in China's contemporary society in general, its language, culture and identity. It will be a useful resource for academics, researchers and students in the field of applied linguistics, language education and Chinese cultural studies and can also be adopted as a reference book for undergraduate courses relating to language identity and culture.

The Rise of Chinese as a Global Language Jeffrey Gil, 2021-06-07. This book investigates the macroacquisition of Chinese: its large-scale acquisition and adoption for various purposes by individuals, governments and organisations, and the implications of this process for the future of English as a global language. The author contextualises the macroacquisition of Chinese within the global ecology of languages, then analyses the factors responsible for the macroacquisition of Chinese, showing in contrast to most academic and popular commentary that a character-based writing system will not stop Chinese from becoming a global language. He then articulates three possible future scenarios: English remaining a dominant global language; English and Chinese both being global languages; and Chinese becoming a global language instead of English. The book concludes by outlining directions for further research on the acquisition and use of Chinese around the world. It will be of interest to students and scholars with an interest in English as a global language, Chinese as a second foreign language, language education policy and applied linguistics more generally.
