Modern Geometries:

Modern Geometries James R. Smart, 1994 This comprehensive best selling text focuses on the study of many different geometries rather than a single geometry and emphasizes practical applications Designed to be a flexible teaching tool for a wide range of students including math education or computer science majors Smart's text features self contained chapters organized so that instructors can cover as much or as little of each topic as they choose from bare minimum one section coverage to full chapter coverage Modern Geometries has earned a reputation for its logical progression of ideas its well constructed exercises and its comprehensive coverage In this edition Smart covers the major new applied areas of computer graphics and emphasizes matrices for transformations **A Course in Modern Geometries** Judith N.

Cederberg, 2013-03-09 A Course in Modern Geometries is designed for a junior senior level course for mathematics majors including those who plan to teach in secondary school Chapter 1 presents several finite geometries in an axiomatic framework Chapter 2 continues the synthetic approach as it introduces Euclid's geometry and ideas of non Euclidean geometry In Chapter 3 a new introduction to symmetry and hands on explorations of isometries precedes the extensive analytic treatment of isometries similarities and affinities A new concluding section explores isometries of space Chapter 4 presents plane projective geometry both synthetically and analytically The extensive use of matrix representations of groups of transformations in Chapters 3 4 reinforces ideas from linear algebra and serves as excellent preparation for a course in abstract algebra The new Chapter 5 uses a descriptive and exploratory approach to introduce chaos theory and fractal geometry stressing the self similarity of fractals and their generation by transformations from Chapter 3 Each chapter includes a list of suggested resources for applications or related topics in areas such as art and history The second edition also includes pointers to the web location of author developed guides for dynamic software explorations of the Poincaré model isometries projectivities conics and fractals Parallel versions of these explorations are available for Cabri Geometry and Geometer's Sketchpad Judith N Cederberg is an associate professor of mathematics at St Olaf College in Minnesota **A Course in Modern Geometries** Judith N.
