**Deficit Irrigation Practices** Food and Agriculture Organization of the United Nations, 2002-01-01 The great challenge for the future will be the task of increasing food production with less water particularly in countries with limited water and land resources In the context of improving water productivity there is a growing interest in deficit irrigation an irrigation practice whereby water supply is reduced below maximum levels and mild stress is allowed with minimal effects on yield This publication presents a range of studies carried out for several crops and under different ecological conditions showing the various options and practices of deficit irrigation and the impacts of reduced irrigation water supply on crop yield The synthesis shows that deficit irrigation can result in substantial water

savings with little impact on the quality and quantity of the harvested yield      **The Highway Magazine** ,1921
