## **Modern Methods In Orchid Conservation:**

Modern Methods in Orchid Conservation H. W. Pritchard, 1989-12-07 The subject matter of this text is conference based and deals with the physiology ecology and management of orchid conservation It offers information not only to the orchid research scientist but also to the orchid enthusiast curious about the scientific background to this topic Interest and support for plant conservation has increased considerably and a great deal of attention has been focused on the plight of members of the orchid family The development makes it desirable to collect existing information and to consider areas of research

*Conservation Methods for Terrestrial Orchids* Nigel Swarts, Kingsley W. Dixon, 2017 Written by world leaders in the field this first ever comprehensive reference on terrestrial orchids concisely explains the procedures necessary for their conservation and restoration It includes beautiful color illustrations methods and techniques in the utilization of modern technology and case studies to illustrate key principles and success stories It covers topics such as monitoring approaches used for mycorrhizal isolation and culture seed sowing techniques soil baiting symbiotic culture of terrestrial species translocation of propagated plants pollination genetic approaches for orchid biology and conservation innovations in alginate encapsulation of seed and mycorrhizal fungus and more With terrestrial orchids now among the worlds most threatened plants the need for conservation is paramount It will equip orchid biologists botanists conservationists students and hobbyists with the necessary methodologies to facilitate the conservation of this endangered group of orchids Although the focus is on terrestrial orchids the techniques described in this book can also be applied equally to epiphytic tree orchids Key Features Clearly and concisely explains the procedures necessary for terrestrial orchid conservation and restoration Offers methods and techniques complete in their detail utilization of modern technology simplicity and ease of application across species from different parts of the world Provides stand alone guidance in each chapter and collectively enables practitioners to undertake what were previously considered complex scientific procedures Includes relevant case studies to illustrate key principles and success stories in orchid conservation written by world leaders in orchid conservation practice and science Relates many of the techniques and procedures to epiphytic orchids to increase the appeal of the book to all orchid conservationists

**Orchid Conservation** Kingsley W. Dixon, 2003      **Conservation of Tropical Plant Species** M.N. Normah, H.F. Chin, Barbara M. Reed, 2012-08-04 The book is designed to provide a review on the methods and current status of conservation of the tropical plant species It will also provide the information on the richness of the tropical plant diversity the need to conserve and the potential utilization of the genetic resources Future perspectives of conservation of tropical species will be discussed Besides being useful to researchers and graduate students in the field we hope to create a reference for a much wider audience who are interested in conservation of tropical plant diversity      Monitoring for Conservation and Ecology F.B. Goldsmith, 2012-12-06 Monitoring has become fashionable Business now talks about monitoring its activities efficiency costs and profits The National Health Service is monitoring general practices and hospitals

it is keen to have more information about efficiency and the duration of stay of patients in different hospitals undergoing different types of treatment These activities are usually carried out in relation to specific objectives with the aim of making activities more cost effective and competitive Does the same apply in biology ecology and nature conservation Or are we still enjoying conducting field surveys for the fun of it at best with rather vague objectives and saying to our colleagues that we do our work because we need to know what is there This book is an opportunity to consider some of the reasons why monitoring is important how it differs from survey how it may be able to answer specific questions and help with site management or problem solving It will explore some of the taxa that are suitable for recording and how you may actually set about doing it It is not intended as a catalogue of techniques but we will in each chapter give you sources of material so that with the minimum of effort you will be able to proceed with an efficient relevant and not too time consuming monitoring programme Some of the points that you need to consider before starting are also set down in the synthesis at the end of the book

*Orchid Biology: Recent Trends & Challenges* Shaik Mahammad Khasim, Sadanand Nagesh Hegde, María Teresa González-Arno, Kanchit Thammasiri, 2020-01-31 This book on Orchid Biology Recent Trends Challenges reviews the latest strategies for the preservation and conservation of orchid diversity and orchid germplasm It is an outcome of the Proceedings of the International Symposium on Biodiversity of Medicinal Plants Orchids Emerging Trends and Challenges held on 9-11 February 2018 at Acharya Nagarjuna University India In addition eminent orchid experts from around the globe were invited to contribute to this book All chapters were peer reviewed by international experts The Orchidaceae are one of the largest families of flowering plants comprising over 700 genera and 22 500 species and contributing roughly 40 percent of monocotyledons They also represent the second largest flowering plant family in India with 1 141 species in 166 genera and contribute roughly 10% of Indian flora Orchids comprise a unique group of plants and their flowers are among the most enchanting and exquisite creations of nature Phylogenetically and taxonomically the Orchidaceae are considered to be a highly evolved family among angiosperms They show incredible diversity in terms of the shape size and colour of their flowers and are of great commercial importance in floriculture markets around the globe Millions of cut flowers of *Cymbidium* *Dendrobium* *Cattleya* *Paphiopedilum* *Phalaenopsis* *Vanda* etc besides potted orchid plants are sold in Western Countries and thus the orchid cut flower industry has now become a multimillion dollar business in Europe the USA and South East Asia Besides their ornamental value orchids hold tremendous pharmaceutical potential Root tubers of *Habenaria edgeworthii* form an important component of the *Astavariga* group of drugs in Ayurvedic medicine It is an established fact that tubers of some terrestrial orchids have been used to treat diarrhoea dysentery intestinal disorders cough cold and tuberculosis Some orchids particularly those belonging to the genera *Aerides* *Arachnis* *Cattleya* *Cymbidium* *Dendrobium* *Epidendrum* *Oncidium* *Paphiopedilum* *Phalaenopsis* *Renanthera* *Vanda* etc have been extensively used to produce internationally acclaimed hybrids Yet paradoxically Indian orchids are victims of their own beauty and popularity As a result

their natural populations have been declining rapidly because of unbridled commercial exploitation in India and abroad. In fact, some orchids are now at the verge of extinction, e.g. *Renanthera imschootiana*, *Diplomeris hirsuta*, *Paphiopedilum fairrieanum*, *Cypripedium elegans*, *Taeniophyllum andamanicum* etc. Given the global importance of orchids in terms of securing human health and wealth, this comprehensive compilation prepared by international experts is highly topical. Its content is divided into five main sections: I Cryopreservation Biotechnology, II Orchid Biodiversity Conservation, III Anatomy Physiology, IV Pollination Biology, and V Orchid Chemicals Bioactive Compounds. All contributions were written by eminent orchid experts, professors from around the world, making the book a valuable reference guide for all researchers, teachers, orchid enthusiasts, orchid growers, and students of biotechnology, botany, pharmaceutical sciences, and ethnomedicine. It will be equally valuable for readers from the horticultural industry, especially the orchid industry, agricultural scientists, and policymakers.

*A Protocol to Determine Seed Storage Behaviour* T. D. Hong, R. H. Ellis, 1996. This publication provides an approach by which conservationists can determine whether or not long term seed storage is feasible for a particular species, i.e. whether or not that species shows orthodox seed storage behaviour, and provides advice on the implementation of the protocol, examples of ways in which the results from seed storage studies could be misinterpreted due to confounding factors, as well as several alternative approaches for estimating seed storage behaviour prior to carrying out actual investigations with the seeds. In particular, the latter section introduces the concept of a multicriteria approach for estimating seed storage behaviour.

*Advances in Plant Breeding Strategies: Breeding, Biotechnology and Molecular Tools* Jameel M. Al-Khayri, Shri Mohan Jain, Dennis V. Johnson, 2016-02-02. The basic concept of this book is to examine the use of innovative methods augmenting traditional plant breeding towards the development of new crop varieties under different environmental conditions to achieve sustainable food production. This book consists of two volumes: Volume 1 subtitled *Breeding Biotechnology and Molecular Tools* and Volume 2 subtitled *Agronomic Abiotic and Biotic Stress Traits*. This is Volume 1 which consists of 21 chapters covering domestication and germplasm utilization, conventional breeding techniques, and the role of biotechnology. In addition to various biotechnological applications in plant breeding, it includes functional genomics, mutations, and methods of detection and molecular markers. In vitro techniques and their applications in plant breeding are discussed with an emphasis on embryo rescue, somatic cell hybridization, and somaclonal variation. Other chapters cover haploid breeding, transgenics, cryogenics, and bioinformatics.

*Birth of Orchid* Eleanor Hawking, 2025-01-30. *Birth of Orchid* presents a captivating exploration of one of Earth's most remarkable plant families, tracing the 80 million year evolutionary journey of orchids from their ancient origins to their current status as one of the planet's most diverse flowering plant groups. The book masterfully weaves together evidence from fossil records, DNA studies, and field research to reveal how these extraordinary plants developed their distinctive features, including their sophisticated pollination mechanisms and remarkable ability to adapt to diverse ecosystems worldwide. Through a carefully structured progression, the book examines

three core aspects of orchid evolution their unique reproductive strategies global distribution patterns and complex ecological relationships Readers discover fascinating insights into how orchids developed their characteristic bilateral symmetry and specialized structures while learning about their intricate relationships with pollinators and mycorrhizal fungi The text particularly shines in its examination of co evolution demonstrating how orchids interactions with other organisms have driven their remarkable diversification What sets this book apart is its interdisciplinary approach combining traditional botanical studies with cutting edge analytical techniques such as electron microscopy and genetic sequencing While maintaining scientific rigor the text remains accessible to both academic researchers and informed general readers offering practical insights for conservation efforts alongside theoretical understanding The comprehensive examination of both wild and cultivated orchids makes this work particularly valuable for anyone interested in botanical science evolution or environmental conservation

*Action Plan for Cypripedium Calceolus in Europe* Jean Devillers-Terschuren, Council of Europe, 1999-01-01

*A Disa Companion* Eric Harley, Sid Cywes, Peter Linder, 2013-06-26 Disas are a genus of African orchids which are not well known even to orchid enthusiasts in Africa However not only are many of the species colourful and or spectacular but they have given great scope to breeders wishing to hybridise and market ever more colourful varieties They have specific cultural requirements but like most things they are easy when you know how This book has a variety of aims it provides an introduction to the fascination and diversity of Disa species it provides information on how to grow them in the garden or greenhouse helped by a description of weather and other aspects of their how they grow in the wild and a section on genetics assists in understanding the basics of colour variation in species and hybrids Finally a section on hybridisation demonstrates the remarkable diversity of form colour and patterns that can be achieved by within and between species crosses with numerous illustrations to back up the claim that Disas are one of the most fascinating and visually appealing of orchids to study admire and with a minimum of skill grow

*Orchid Biology VIII* T. Kull, J. Arditti, 2013-03-14 Note Not long after publication of *Orchid Biology Reviews and Perspectives* OB volume VII my co editor Dr Alec M Pridgeon informed me that the pressure of

other duties especially the editing of Genera Orchidacearum GO will make it impossible for him to continue as co editor and eventually editor of the series Alec is an excellent orchid scientist and editor I was sorry to that he had to leave OB but glad that GO will be in his able hands The first volume of GO attests to his considerable abilities and I wish him much success in the future Editors of orchid publications are not the most common of species to use a botanical analogy and finding a replacement for Alec was not easy However I was fortunate that Dr Tiiu Kull agreed to become my co editor and eventually take over the series As is obvious from the Contributors section Dr Kull has extensive experience as both writer and editor My interactions with her while editing this volume have convinced me she is an excellent choice Scientifically she brings to OB an appreciation and understanding of northern terrestrial orchids a group which has not received as much attention as it deserves Another addition to OB is Dr Tim Wing Yam who agreed to become an associate editor Tim who holds a position at the Singapore Botanic Gardens will provide expertise on seed germination hybridization tissue culture species and conservation

**A Colour Atlas of Plant Propagation and Conservation** Bryan Bowes, 1999-04-01 While scientific and socio political communities around the world are aware of the natural and economic importance of biodiversity we are faced with an ever increasing number of plant species under threat of extinction Conservation is thus a vital part of the plant scientist's work in the field in botanic gardens and in universities This colour American Orchid Society Bulletin American Orchid Society, 1994

**Microorganisms in Plant Conservation and Biodiversity** K. Sivasithamparam, K.W. Dixon, R.L. Barrett, 2007-05-08 Plant conservation is increasingly recognised as an outstanding global priority yet despite considerable efforts over the last few decades the number of threatened species continues to rise The practice of plant conservation has for too long been a rather hit or miss mixture of methods While microorganisms have been recognised as a crucial and essential element in supporting the lifecycles of plant species there has been limited recognition of the relationships between macro level conservation facilitating ecosystem functioning at the micro level This book addresses the role of microorganisms in conservation both their support functions and deleterious roles in ecosystem processes and species survival Importantly a number of authors highlight how microbial diversity is itself now under threat from the many and pervasive influences of man What is clear from this volume is that like many contemporary treatments of plant and animal conservation the solution to mitigate the erosion of biodiversity is not simple This book represents an attempt to bring to the fore the ecological underwriting provided by microorganisms Integrated Horticulture Development in Eastern Himalayas A. N. Sarkar, 1994

The Eastern Himalayan region is blessed with biologically diverse natural resources The wide ranging topographies and congenial agro climates offer immense potential for growing almost all conceivable horticultural crops namely fruits vegetables plantations spices ornamentals flowers aromatic and medicinal crops etc

**Bioprospecting of Indigenous Bioresources of North-East India** Jubilee Purkayastha, 2016-08-16 This work is a comprehensive information on the indigenous bioresources of North Eastern India with the scope of bioprospecting for discovery and commercialization of new sources and products and long term ecological balance The exploration conservation and sustainable utilization of bioresources of world's Megabiodiversity Hotspots are undeniable North Eastern India is a recognised biodiversity hot spot where the evolutionary forces are at its optimum making this region as centre of origin for many species Although little bit exploratory studies have been conducted in this part of the globe but a scientific exploitation of the bioresources is almost lacking Unscientific exploitation and overexploitation without proper knowledge of the bioresources may lead to imbalanced ecosystem of this mega diversity region At the same time very less exploration and

exploitation will hamper biodiversity based development Today unscientific dramatic changes are underway in this region Human activities are changing degrading and destroying the bioresources in an unplanned manner Scientific bioprospecting of the bioresources will boost the economy while ensuring conservation This book offers comprehensive information about various levels of bioprospecting of the gene pool of this Indo Burma Mega Biodiversity Hot Spot the North East India which is endowed with huge biodiversity potential for exploration and exploitation for the benefit of humankind Also this book highlights the less and merely explored part of the indigenous biodiversity of North East India with explanation towards their better sustainable exploitation for benefit of the people economy and environment The novelty of the book lies in expert coverage of the bioresources of this mega diverse region including plants microbes insects etc with provisions for their sustainable scientific utilization This book portrays North East India as a melting pot of bioresources which are little explored and also those resources which are still to be explored The book mainly highlights the bioprospecting approaches for North East Indian bioresources and thus it make itself a unique one in filling the knowledge gap that is there regarding the bioprospecting of the biodiversity of this special region on the earth The book concludes by the ecotourism potential of this region The target audiences for this book include biodiversity economists who are working on technology and bioresource management issues and especially on biotechnology and biodiversity development economists addressing the issues of bioresources in developing countries These people may be in academia in government in non governmental organizations and in private companies The other target audiences group is policy scholars in government public sectors who are interested in issues of biotechnology IPRs and biodiversity In addition scholars experts in both development studies and resource management studies form another group of target audiences Also the book will be useful for the interaction between developed and developing nations regarding the issues of biodiversity and bioprospecting as North Eastern India is the hub of Biodiversity
