Artificial Intelligence, Human Agency and the Educational Leader Rosemary Papa, Karen Moran Jackson, 2021-12-06 This book includes contributions by scholars from a variety of disciplines, the dialogue and discourse on how AI (artificial intelligence) development includes and/or excludes pedagogical/educational learning theories focused on the learner. A call from Educational Leaders Without Borders (ELWB) was issued to scholars from across the globe who were asked to write a vignette described as an evocative description or account on how education leaders envision education in 2051 and AI beyond mere product purchase. These vignettes should engage us in questions as to how the development and use of AI technologies are shaped. As educators who believe education should be established on social justice beliefs and practices, our review of literature shows there are no books addressing the complexities of AI development and the role of educators. The futuristic element is unique in its approach to imagine a socially just, better world in which to inspire educators. This unique feature encourages creativity in how one addresses the call to imagine a future world and our role as educators in that world.

Biomedical Visualisation Paul M. Rea, 2019-07-16 This edited book explores the use of technology to enable us to visualise the life sciences in a more meaningful and engaging way. It will enable those interested in visualisation techniques to gain a better understanding of the applications that can be used in visualisation, imaging, and analysis, education, engagement, and training. The reader will be able to explore the utilisation of technologies from a number of fields to enable an engaging and meaningful visual representation of the biomedical sciences. This use of technology-enhanced learning will be of benefit for the learner, trainer, and faculty in patient care and the wider field of education and engagement. This second volume on Biomedical Visualisation will explore the use of a variety of visualisation techniques to enhance our understanding of how to visualise the body, its processes, and apply it to a real-world context. It is divided into

three broad categories Education Craniofacial Anatomy and Applications and finally Visual Perception and Data Visualization In the first four chapters it provides a detailed account of the history of the development of 3D resources for visualisation Following on from this will be three major case studies which examine a variety of educational perspectives in the creation of resources One centres around neuropsychiatric education one is based on gaming technology and its application in a university biology curriculum and the last of these chapters examines how ultrasound can be used in the modern day anatomical curriculum The next three chapters focus on a complex area of anatomy and helps to create an engaging resource of materials focussed on craniofacial anatomy and applications The first of these chapters examines how skulls can be digitised in the creation of an educational and training package with excellent hints and tips The second of these chapters has a real world application related to forensic anatomy which examines skulls and soft tissue landmarks in the creation of a database for Cretan skulls comparing it to international populations The last three chapters present technical perspectives on visual perception and visualisation By detailing visual perception visual analytics and examination of multi modal multi parametric data these chapters help to understand the true scientific meaning of visualisation The work presented here can be accessed by a wide range of users from faculty and students involved in the design and development of these processes to those developing tools and techniques to enable visualisation in the sciences
