Homeopathic Materia Medica of Modern Drugs Mr. Rohit Manglik, 2024-05-17 Integrates homeopathic perspectives with conventional pharmacological knowledge of modern drugs for holistic understanding.

Modern Drug use R.D. Mann, 2012-12-06 Aureolus Theophrastus Bombastus von Hohenheim 1493-1541, commonly called Paracelsus, was both one of the most original medical thinkers of the sixteenth century and was the man who made opium, laudanum, arsenic, copper sulphate, iron, lead, mercury, potassium sulphate, and sulphur part of the pharmacopoeia. A man of many parts but a pioneer chemist, Paracelsus can be regarded as the originator of a body of work which was the precursor of chemical pharmacology and therapeutics. To no small extent he stands therefore as a father figure of the modern pharmaceutical industry. Today's physician who wants to look at that industry since the days of Paracelsus and weigh the great gains against the problems soon encounters difficulties. To diminish them, this Enquiry approaches its subject from historical principles. This gives increased perspective to questions asked late in the book, these questions being prompted by medical practice outside the industry and some twenty years of drug development activity within it. In antiquity, medicines often seem to have been used as part of magic, and primitive man thought disease to be due to supernatural forces which he could influence. The legacy remains, and in trying to sort out what is rational in our use of drugs today, we have to separate our small bits of science from the ancient magic and from modern commercial pressures and conditioning.

Traditional Resources and Tools for Modern Drug Discovery Anupam Das Talukdar, Jayanta Kumar Patra, Gitishree Das, Deepa Nath, 2024-09-27 This book provides perspectives on the combinatorial approach of plant-based compounds for drug discovery to achieve better disease-curing outcomes, introducing the evolution of ethnobotany and traditional medicine in modern drug development. It covers the biotechnological interventions for the identification and screening of compounds and their optimization to enhance affinity, selectivity, bioavailability, and metabolic stability. While overviewing how essential compounds are successfully identified from herbal medicinal plants and utilized in the form of effective drugs which eventually have helped in combating long-term diseases in humans, the book also provides a better understanding of how infection and the diseases caused are regulated at the molecular and physiological stages. The book also highlights the importance of bioactive compounds in modern drug discovery and the perspectives for a potential industrial application. The chapters are developed by eminent subject experts with due care and clarity and cover an up-to-date literature review with relevant illustrations. The book would cater to the needs of undergraduate and graduate students, researchers, and scientists and may attract the attention of pharmaceutical companies, industrialists, and health policymakers.
