Hagen, 2009-09-17 For the first time the discipline of modern inorganic chemistry has been systematized according to a plan constructed by a council of editorial advisors and consultants among them three Nobel laureates E O Fischer H Taube and G Wilkinson Rather than producing a collection of unrelated review articles the series creates a framework which reflects the creative potential of this scientific discipline Thus it stimulates future development by identifying areas which are fruitful for further research The work is indexed in a unique way by a structured system which maximizes its usefulness to the reader It augments the organization of the work by providing additional routes of access for specific compounds reactions and other topics *Reagents for Radical and Radical Ion Chemistry* David Crich, 2013-05-30 Radicals and radical ions are important intermediates with wide use in organic synthesis The first book to concentrate on reagents for the creation and use of radicals and radical ions this new volume in the Handbooks of Reagents for Organic Synthesis series compiles articles taken from the e eros database on reagents for use in radical and radical chemistry to help the chemist in the lab choose the right reagents Reflecting the enormous growth of radical chemistry over the past ten years this is an essential guide for all synthetic chemists

Organoselenium Chemistry I Alain Krief, Laszlo Hevesi, 2012-12-06 During the last fifteen years organoselenium chemistry underwent a spectacular mutation from an exotic area of science practised by a few specialists it became a relatively well mastered and widely used methodology of synthetic organic chemistry The key to this success is that a fair number of selenium based reagents and reactions have been discovered which are able to perform specific transformations selectively and often under very mild conditions The aim of this volume is to present the different selenium containing reagents now available to chemists to mention the scope as well as the limitations of their reactions and to compare those which possess similar reactivities The authors present the reagents in the order of increasing oxidation level around the selenium atom
