Current Issues in Economic Integration M. Bruna Zolin, 2016-05-13 The current economic crisis has called into question the long term viability of the decoupling between multinational firms and the banking system. It has also cast serious doubts on the US dollar centred monetary system and invited reassessment of the long term viability of US-China economic relations based on a US current account deficit absorbed by Chinese financial institutions. It is also an opportunity to analyse the rise in property prices particularly in fast growing economies. Long term food security is also an issue bringing to the fore the multinational firms from emerging economies such as China and India and calling into question the response strategies of multinational firms from the West and Japan. Developments in Injection Moulding—1 A. Whelan,J.L. Craft,2012-12-06 Injection moulding is the most important moulding process used by the plastics industry and some idea of its importance can be obtained by considering the following

figures The value of the UK market for plastics processing equipment was 60 million in 1977 Of this sum 23 million was spent on injection moulding machines that is 40 % of all the money spent on plastics processing equipment in the UK It has been estimated that one third of all plastics materials are processed by injection moulding At the present time the process is of greater importance to the thermoplastics industry but its relevance to the thermoset industry should not be ignored Most of the equipment now used is based on single screw pre plasticising units Once these machines had become established in the 1960s it was felt that the ultimate had been reached in machine design and utilisation However since that time machines processes and materials have undergone extensive development to make injection moulding safer more reliable easier to use and more economical to operate The purpose of this book is to review some of the developments that have taken place in this very important area These developments are described by specialists in the field who have extensive industrial experience and whose contribution will therefore be of immediate relevance to those concerned with the usage and application of this the most important plastics moulding process
