New Knowledge In The Biomedical Sciences:

New Knowledge in the Biomedical Sciences W.B. Bondeson,H. Tristram Engelhardt Jr.,S.F. Spicker,J.M. White,1982-01-31 The spectacular development of medical knowledge over the last two centuries has brought intrusive advances in the capabilities of medical technology These advances have been remarkable over the last century but especially over the last few decades culminating in such high technology interventions as heart transplants and renal dialysis These increases in medical powers have attracted societal interest in acquiring more such knowledge They have also spawned concerns regarding the use of human subjects in research and regarding the byproducts of basic research as in the recent recombinant DNA debate As a consequence of the development of new biomedical knowledge physicians and biomedical scientists have been placed in positions of new power and responsibility The emergence of this group of powerful and knowledgeable experts has occasioned debates regarding the accountability of physicians and biomedical scientists But beyond that the very investment of resources in the acquisition of new knowledge has been questioned Societies must decide whether finite resources would not be better invested at this juncture or in general in the alleviation of the problems of hunger or in raising general health standards through interventions which are less dependent on the intensive use of high technology To put issues in this fashion touches on philosophical notions concerning the claims of distributive justice and the ownership of biomedical knowledge

Have, G.L. Kimsma, S.F. Spicker, 2012-12-06 The growth of knowledge and its effects on the practice of medicine have been issues of philosophical and ethical interest for several decades and will remain so for many years to come The outline of the present volume was conceived nearly three years ago In 1987 a conference on this theme was held in Maastricht the Netherlands on the occasion of the founding of the European Society for Philosophy of Medicine and Health Care ESPMH Most of the chapters of this book are derived from papers presented at that meeting and for the purpose of editing the book Stuart Spicker Ph D joined two founding members of ESPMH Henk ten Have and Gerrit Kimsma The three of them successfully brought together a number of interesting contributions to the theme and ESPMH is grateful and proud to have initiated the production of this volume The Society intends that annual meetings be held in different European countries on a rotating basis and to publish volumes related to these meetings whenever feasible In 1988 the second conference was held in Aarhus Denmark on Values in Medical Decision Making and Resource Allocation in Health Care In 1989 a meeting was held in Czestochowa Poland on European Traditions in Philosophy of Medicine From Brentano to Bieganski It is hoped that these conferences and the books to be derived from them will initiate a new European tradition lasting well into the 21 st century P

Berman, 2020-07-08 All too often individuals engaged in the biomedical sciences assume that numeric data must be left to the proper authorities e g statisticians and data analysts who are trained to apply sophisticated mathematical algorithms to sets of data This is a terrible mistake Individuals with keen observational skills regardless of their mathematical training are in the best position to draw correct inferences from their own data and to guide the subsequent implementation of robust mathematical analyses Volume 2 of *Logic and Critical Thinking in the Biomedical Sciences* provides readers with a repertoire of deductive non mathematical methods that will help them draw useful inferences from their own data Volumes 1 and 2 of *Logic and Critical Thinking in the Biomedical Sciences* are written for biomedical scientists and college level students engaged in any of the life sciences including bioinformatics and related data sciences Demonstrates that a great deal can be deduced from quantitative data without applying any statistical or
