Research Germano Lambert-Torres,Gilberto Capistrano Cunha de Andrade,Carlos Henrique Valério De Moraes,2025-07-16 Optimization processes are present in nearly all human activities aiming to reduce time and expenses conserve resources and maximize efficiency Classical numerical optimization methods were initially employed in more complex or elaborate problems This class of methods was convenient to use when equations could correctly and completely formulate all the attributes of the problem to be optimized and whose search space for the solution had convexity characteristics and was not multimodal Expressing a problem completely through equations is often a difficult if not impossible task because linguistic values or employing quantities that are not easily dealt with by classical optimization methods can only describe certain limitations and barriers Irregular and non convex search spaces also present problems for classical methods especially those with multiple local minima and maxima as they can lead to suboptimal solutions In this context researchers in optimization have presented new techniques to overcome these barriers introducing new concepts and methods that enable working with problems that are not well defined and in multimodal search spaces Many of these techniques utilize artificial intelligence methods and it is possible to optimize problems where their limitations are not clearly defined or where their search spaces contain different local maxima and minima This book is a contribution in this sense In it the reader will find two sections The first titled Methodologies presents the frontier of state of the art optimization techniques and their applications to various problems The second section titled Applications presents examples of practical applications of modern techniques in optimizing issues which can be easily adapted to others with similar characteristics Thus the reader can use this book to optimize their problems by applying the solutions presented in the chapters and adapting them to their specific issues **Computer**

Generated Physical Properties Stan Bumble,1999-06-01 Computer Generated Physical Properties offers the environmental scientist a basis to predict the properties of molecules and reengineer them to remove those properties that are harmful to the environment This technology is currently used in other fields and is now becoming popular in the environmental engineering field because of its pollution prevention and waste reduction capabilities This book interdisciplinary in scope treats the physical properties of matter as generated by computers It covers a wide variety of topics pointing towards synthesizing new molecules to substitute for reactants intermediaries and products in industrial processes with better physical and environmental properties than the original The author achieves this with a spreadsheet program called SYNPROPS that operates on a PC computer with optimization features A radar type graph one for each property visually sorts the various groups in order of their contribution to the property creating the necessity for a computer to obtain answers for the structure of the optimum molecules for substitution or synthesis The author discusses applications to biologically active molecules without side effects including antineoplastic drugs Additionally he demonstrates model compounds and the applications of SYNPROPS optimization and substitution This book has everything you need to know about deriving properties and combinational chemistry from molecular structure Soft Computing Applications in Industry Bhanu
