Pop Viability Ecol Bull:

Population Viability in Plants Christy A. Brigham, Mark W. Schwartz, 2013-06-29 Providing a quantitative assessment of threatened plant populations that holds for varying management scenarios has become an essential part of conservation planning Here renowned plant ecologists provide information on major threats to plants when and where to conduct a plant viability assessment PVA what type of PVA to conduct what alternative options to PVA are available what information is required for which kind of viability assessment what attributes of the population in question should be considered and what the limits of the PVA would be As such this volume can be used as a training tool for the environmental manager or a teaching aid for reviewing the current state of knowledge on plant population viability *Introduction to Conservation*

Genetics Richard Frankham, David A. Briscoe, Jonathan D. Ballou, 2002-03-14 Genetic diversity biodiversity population management **Applying Landscape Ecology in Biological Conservation** Kevin Gutzwiller, 2011-06-27 Landscape ecology and conservation biology are rapidly developing disciplines and a current synthesis of principles and applications in these two fields is needed under one cover Many managers are not applying principles of landscape ecology in efforts to conserve biota yet the loss of biological diversity could be reduced if broad scale processes and patterns were consistently considered in management and conservation decisions Bringing together insights from leaders in landscape ecology and conservation biology this book explains how our knowledge about landscape ecology can help us understand manage and maintain biodiversity Beyond explaining pertinent concepts of landscape ecology and biological conservation and describing examples of their use in management research and planning this book also distills principles for applying landscape ecology in conservation identifies gaps in current knowledge and provides research approaches to fill those voids The book is divided into five parts the first part introduces the book and discusses what landscape ecology is and why it is important to biological conservation The second deals with multiple scales connectivity and organism movement The third part discusses landscape change and how this affects biodiversity and the fourth part covers conservation planning The final part presents a synthesis that identifies overarching principles pervasive constraints and realistic prospects for applying landscape ecology in biological conservation Conservationists land use planners and ecologists will find this book to be an essential resource

Foreword by Richard T T Forman **Analysis and Management of Animal Populations** Byron K. Williams, James D. Nichols, Michael J. Conroy, 2002-05-16 Analysis and Management of Animal Populations deals with the processes involved in making informed decisions about the management of animal populations It covers the modeling of population responses to management actions the estimation of quantities needed in the modeling effort and the application of these estimates and models to the development of sound management decisions The book synthesizes and integrates in a single volume the methods associated with these themes as they apply to ecological assessment and conservation of animal populations Integrates population modeling parameter estimation and decision theoretic approaches to management in a single cohesive

framework Provides authoritative state of the art descriptions of quantitative approaches to modeling estimation and decision making Emphasizes the role of mathematical modeling in the conduct of science and management Utilizes a unifying biological context consistent mathematical notation and numerous biological examples **New Directions in**

Conservation Medicine A. Alonso Aguirre, Richard Ostfeld, Peter Daszak, 2012-06-08 New Directions of Conservation Medicine Applied Cases of Ecological Health covers topics from emerging diseases and toxicants to the EcoHealth One Health explosion It challenges the notion that human health is an isolated concern removed from the bounds of ecology and species interactions Population Dynamics and the Tribolium Model: Genetics and Demography Robert F.

Costantino, Robert A. Desharnais, 2012-12-06 The study of populations is becoming increasingly focused on dynamics We believe there are two reasons for this trend The first is the impact of nonlinear dynamics with its exciting ideas and colorful language bifurcations domains of attraction chaos fractals strange attractors Complexity which is so very much a part of biology now seems to be also a part of mathematics A second trend is the accessibility of the new concepts The barriers to communication between theorist and experimentalist seem less impenetrable The active participation of the experimentalist means that the theory will obtain substance Our role is the application of the theory of dynamics to the analysis of biological populations We began our work early in 1979 by writing an ordinary differential equation for the rate of change in adult numbers which was based on an equilibrium model proposed a decade earlier During the next few months we filled our notebooks with straightforward deductions from the model and its associated biological implications Slowly some of the biological observations were explained and papers followed on a variety of topics genetic and demographic stability stationary probability distributions for population size population growth as a birth death process natural selection and density dependent population growth genetic disequilibrium and the stationary stochastic dynamics of adult numbers Ecology and Management of Cowbirds and Their Hosts James N. M. Smith, 2000 In the past two centuries cowbirds have increased in numbers and extended their range across North America while many of the native songbird species whose nests they parasitize to raise their young have declined This timely book collects forty essays by most of the principal authorities on the biology and management of cowbirds The book's goals are to explore the biology of cowbirds the threats they pose to host species and populations and the management programs that are being undertaken to minimize these threats The book is organized into five sections each with an extended editor's introduction that places the contributions in a broad up to date setting The sections cover The changing abundance of cowbirds and the ways in which their numbers can be estimated Host choice by cowbirds the negative effects of cowbirds on particular host species and the daily patterns of cowbird behavior Behavioral interactions between cowbirds and specific host species Patterns of cowbird abundance and host use across varying landscapes Management programs designed to control cowbirds and protect threatened songbirds James N M Smith teaches at the University of British Columbia in Vancouver Terry L Cook works for the Nature Conservancy in Seattle

Reviews of Environmental Contamination and Toxicology George W. Ware, 2012-12-06 Reviews of Environmental Contamination and Toxicology provides detailed review articles concerned with aspects of chemical contaminants including pesticides in the total environment with toxicological considerations and consequences *Ecological Risk Management* Hiroyuki Matsuda, 2021-05-06 This book introduces the theory and practice of ecological risk management Using recent and live case studies in Japan the book explains the use of basic mathematical techniques in extinction risk adaptive population management avian collision risk in wind farms potential biological removal for marine mammals and ecological risk assessment of heavy metals The focus of this book is on case studies of nature conservation in Japan including internationally renowned topics of Japanese fisheries Shiretoko World Heritage Fukushima Daiichi Nuclear Power Plant accident It also covers the adaptive risk management of the new coronavirus disease The book comprises four parts covering ecotoxicology fisheries wildlife management and conservation and ecosystem based management It differs from other books in having its primary interest in human impacts on animals plant and ecosystems while existing works in this area concentrate on the fate of toxic substances in the environments and their effects on humans This book is unique in that it indicates various environmental issues that the theoretical ecology is potentially applicable without concentrating into any particular subject such as ecotoxicology or conservation biology Primary readers are undergraduate graduate students staffs of environmental consultant companies and environmental NPOs and journalists Readers will find this book useful for its abundant information on case studies of ecological risk management and consensus building in Japan

The Longleaf Pine Ecosystem Shibu Jose, Eric J. Jokela, Deborah L. Miller, 2007-09-09 This book unites a wealth of current information on the ecology silviculture and restoration of the Longleaf Pine ecosystem The book includes a discussion of the significant historical social and political aspects of ecosystem management making it a valuable resource for students land managers ecologists private landowners government agencies consultants and the forest products industry

Giant Pandas Don Lindburg, Karen Baragona, 2004-08-23 The much loved giant panda a secretive denizen of the dense bamboo forests of western China has become an icon worldwide of progress in conservation and research This volume written by an international team of scientists and conservationists including Chinese researchers whose work has not been available in English tells the promising story of how the giant panda returned from the brink of extinction The most important sourcebook on giant pandas to date it is the first book since 1985 to present current panda research and the first to place the species in its biological ecological and political contexts More than a progress report on a highly endangered species Giant Pandas Biology and Conservation details the combination of scientific understanding local commitment and government involvement that has been brought into play and asks what more needs to be done to ensure the panda s survival The book is

divided into four parts Evolutionary History of the Giant Panda Studies of Giant Panda Biology Pandas and Their Habitats and Giant Panda Conservation It combines the latest findings from the field and the laboratory together with panel and workshop summaries from a recent international conference Taken together the chapters highlight how international cooperation has led to better management in the wild and in captivity The volume also shows how concepts such as buffer zones links between forest fragments multiple use areas and cooperation with local people who have a stake in the resources highly relevant concepts for conservation problems around the world have been key to the panda s survival

Ecology and Morphology of Copepods Frank D. Ferrari, Brian P. Bradley, 2013-04-18 Ecology and Morphology of Copepods is organized under the following general topics Behavior Feeding Genetics Horizontal Variations Morphology Phylogeny Reproduction Seasonal Changes Vertical Distribution plus two special sessions on copepods of the genus *Acartia* and cyclopoid mosquito interactions The Maxilliped Lecture given by Dr Arthur G Humes of Boston University clearly established the importance of copepods to the earth s organic diversity The book consists of selected research articles from the different sections The articles published here reflect the diverse research interests of copepodologists today and are distinguished by their high quality Their impact will ensure that this volume is consulted by a wide range of research biologists

Ecology of Soil Seed Banks Mary Allessio Leck, 2012-12-02 Ecology of Soil Seed Banks examines the factors that influence seed bank dynamics and the variety of patterns found among different species This book presents seed banks in a community context to explore the ecological implications of different patterns and thus begin the development of a synthesis by comparing various communities Organized into five parts this book first examines the general processes that influence inputs or losses from the seed bank including predation dormancy germination mechanisms and their evolutionary importance Then this text examines seed banks in a community context Only eight vegetation types are included but the range in diversity of life form length of growing season and dominant environmental conditions allow comparisons of seed bank patterns This book also explores the role of seed banks in vegetation management This reference material will be a valuable reference material to population and community ecologists and managers Evolutionary consequences of seed banks should be of interest to population and theoretical biologists *The Journal of Raptor Research* ,2003 *Biodiversity in Managed Landscapes* Robert C. Szaro, David W. Johnston, 1996 The conservation of biodiversity has profound implications for managing natural resources with the need for scientific information as a foundation for management decisions increasing dramatically The intent of this book is to look beyond the theory of biodiversity to the principles practices and policies needed for its conservation Its objectives are to provide the scientific basis for understanding biodiversity document case
