The New Era Of Exponential Encryption Mele Gasakis, Max Schmidt, 2019-01-08 In their book Era of Exponential Encryption Beyond Cryptographic Routing the authors provide a vision that can demonstrate an increasing multiplication of options for encryption and decryption processes Similar to a grain of rice that doubles exponentially in every field of a chessboard more and more newer concepts and programming in the area of cryptography increase these manifolds both encryption and decryption require more session related and multiple keys so that numerous options even exist for configuring hybrid encryption with different keys and algorithms symmetric and asymmetrical methods or even modern multiple encryption with that ciphertext is converted again and again to ciphertext It will be analyzed how a handful of newer applications like e.g. Spot On and GoldBug E Mail Client Crypto Chat Messenger and other open source software programming implement these encryption mechanisms Renewing a key several times within the dedicated session with cryptographic calling has forwarded the term of perfect forward secrecy to instant perfect forward secrecy IPFS But even more if in advance a bunch of keys is

sent a decoding of a message has to consider not only one present session key but over dozens of keys are sent prior before the message arrives The new paradigm of IPFS has already turned into the newer concept of these Fiasco Keys Fiasco Keys are keys which provide over a dozen possible ephemeral keys within one session and define Fiasco Forwarding the approach which complements and follows IPFS And further by adding routing and graph theory to the encryption process which is a constant part of the so called Echo Protocol an encrypted packet might take different graphs and routes within the network This shifts the current status to a new age The Era of Exponential Encryption so the vision and description of the authors If routing does not require destination information but is replaced by cryptographic insights then it is beyond cryptographic routing Cryptographic Discovery means If the cryptographic token is matching the message belongs to me The Echo Protocol is in this regard an initial welcome within the Era of Exponential Encryption The authors identify also four arms within the Era of Exponential Encryption and derive from these developments social legal political and economic recommendations
