**Abstract** The purpose of this study was to determine the effect of a 12-week training program on the physical fitness and health-related quality of life (HRQL) of sedentary, middle-aged women. The study was a randomized controlled trial. The intervention group (n = 20) participated in a 12-week training program, while the control group (n = 20) remained sedentary. The training program consisted of three sessions per week, each lasting 45 minutes. The sessions included aerobic exercise, strength training, and flexibility exercises. The control group performed no exercise. The primary outcome was the change in HRQL, measured using the EuroQol-5D questionnaire. Secondary outcomes included changes in physical fitness, measured using a 6-minute walk test, and body composition, measured using a dual-energy X-ray absorptiometry scan. The results showed that the intervention group had a significant improvement in HRQL compared to the control group. The improvement was most pronounced in the domains of physical functioning and mobility. There were no significant differences between the groups in the domains of mental functioning, cognition, and social functioning. The intervention group also showed a significant improvement in physical fitness, measured by the 6-minute walk test, and a significant decrease in body mass index (BMI). The control group showed no significant changes in physical fitness or body composition. The results of this study suggest that a 12-week training program can improve the physical fitness and HRQL of sedentary, middle-aged women. The improvement in HRQL was most pronounced in the domains of physical functioning and mobility. There were no significant differences between the groups in the domains of mental functioning, cognition, and social functioning. The intervention group also showed a significant improvement in physical fitness, measured by the 6-minute walk test, and a significant decrease in BMI. The control group showed no significant changes in physical fitness or body composition.

**Domestic Violence**  
Domestic violence is a criminal offense involving the use of force or threats to harm or intimidate a family member or intimate partner. It can include physical assault, sexual assault, stalking, and emotional abuse. Domestic violence is a serious crime that can result in serious injury or death. If you are a victim of domestic violence, you should seek help from law enforcement and a domestic violence advocate. For more information, visit [www.dv.org](http://www.dv.org).

**Pharmacokinetics**—pharmacokinetic data are consistent with single-compartment pharmacokinetics in humans. Plasma concentrations of the active enantiomer, (S)-sulfamonomethoxine, are increased up to eight-fold in the presence of trimethoprim. The pharmacokinetic interaction can be explained by inhibition of the elimination of (S)-sulfamonomethoxine.

**Penetration 'Too Simple'**  
 "Penetration is not a simple matter," says a senior executive at a major U.S. bank. "It's a complex process that involves a lot of factors, including the size of the market, the level of competition, and the resources available to the company. It's not a simple matter to penetrate a new market."
