## **Population And Economy From Hunger To Modern Economic Growth:**

*Population and Economy* Tommy Bengtsson, Osamu Saitō, 2000      *Population and the Economy*, 1997      *Scotland's Populations from the 1850s to Today* Michael Anderson, 2018-02-09 Scotland's Populations is a coherent and comprehensive description and analysis of the most recent 170 years of Scottish population history With its coverage of both national and local themes set in the context of changes in Scottish economy and society this study is an essential and definitive source for anyone teaching or writing on modern Scottish history sociology or geography Michael Anderson explores subjects such as population growth and decline rural settlement and depopulation and migration and emigration It sets current and recent population changes in their long term context exploring how the legacies of past demographic change have combined with a history of weak industrial investment employment insecurity deprivation and poor living conditions to produce the population profiles and changes of Scotland today While focussing on Scottish data Anderson engages in a rigorous treatment of comparisons of Scotland with its neighbours in the British Isles and elsewhere in Europe which ensures that this is more than a one country study      **The Neolithic Demographic Transition and its Consequences** Jean-Pierre Bocquet-Appel, Ofer Bar-Yosef, 2008-09-30 The transition from hunting and gathering to farming the Neolithic Revolution was one of the most significant cultural processes in human history that forever changed the face of humanity Natufian communities 15 100 12 000 Cal BP all dates in this chapter are calibrated before present planted the seeds of change and the Pre Pottery Neolithic PPN ca 12 000 ca 8 350 Cal BP people were the first to establish farming communities The revolution was not fully realized until quite late in the PPN and later in the Pottery Neolithic PN period We would like to ask some questions and comment on a few aspects emphasizing the linkage between biological and cultural developments during the Neolithic Revolution The biological issues addressed in this chapter are as follows Is there a demographic change from the Natufian to the Neolithic Is there a change in the overall health of the Neolithic populations compared to the Natufian Is there a change in the diet and how is it expressed Is there a change in the physical burden stress people had to bear with Is there a change in intra and inter community rates of violent encounters From the cultural perspective the leading questions will be What was the change in the economy and when was it fully realized Is there a change in settlement patterns and site nature and organization from Natufian to Neolithic Is there a change in human activities and division of labor      **Population and Development** Tim Dyson, 2013-07-04 The demographic transition and its related effects of population growth fertility decline and ageing populations are fraught with controversy When discussed in relation to the global south and the modern project of development the questions and answers become more problematic Population and Development offers an expert guide on the demographic transition from its origins in Enlightenment Europe through to the rest of the world Tim Dyson examines how while the phenomenon continues to cause unsustainable population growth with serious economic and environmental implications its processes have underlain previous periods of sustained economic growth helped to liberate women from the

domestic domain and contributed greatly to the rise of modern democracy This accessible yet scholarly analysis will enable any student or expert in development studies to understand complex and vital demographic theory

**Procreation and Population in Historical Social Science** Daniela Danna, 2021-08-03 The book sees procreation the forgotten basis of population dynamics and its macrohistorical results through the lenses of world system analysis in a nondogmatic way This interdisciplinary book sheds light on the historical paths leading to the current unprecedented numbers of humans on the globe fuelled by the capitalist demand for labor and mediated by the role of women in society Procreation and Population is a critical text opposing the current disciplinary fences that demonstrably hinder our comprehension of social phenomena Attentive to gender relations the book boldly tracks the big picture of population dynamics and its most reliable theories in times of postmodernist taboos on generalizations and on the search for the historical laws of human society

*Living Standards in the Past* Robert C. Allen, Tommy Bengtsson, Martin Dribe, 2005-03-24 Why did Europe experience industrialisation and modern economic growth before China India or Japan This is one of the most fundamental questions in Economic History and one that has provoked intense debate The main concern of this book is to determine when the gap in living standards between the East and the West emerged The established view dating back to Adam Smith is that the gap emerged long before the Industrial Revolution perhaps thousands of years ago While this view has been called into question and many of the explanations for it greatly undermined the issue demands much more empirical research than has yet been undertaken How did the standard of living in Europe and Asia compare in the seventeenth and eighteenth centuries The present book proposes an answer by considering evidence of three sorts The first is economic focusing on income food production wages and prices The second is demographic comparing heights life expectancy and other demographic indicators The third combines the economic and demographic by investigating the demographic vulnerability to short term economic stress The contributions show the highly complex and diverse pattern of the standard of living in the pre industrial period The general picture emerging is not one of a great divergence between East and West but instead one of considerable similarities These similarities not only pertain to economic aspects of standard of living but also to demography and the sensitivity to economic fluctuations In addition to these similarities there were also pronounced regional differences within the East and within the West regional differences that in many cases were larger than the average differences between Europe and Asia This clearly highlights the importance of analysing several dimensions of the standard of living as well as the danger of neglecting regional social and household specific differences when assessing the level of well being in the past

Old and New Perspectives on Mortality Forecasting Tommy Bengtsson, Nico Keilman, 2019-03-28 This open access book describes methods of mortality forecasting

and discusses possible improvements. It contains a selection of previously unpublished and published papers which together provide a state of the art overview of statistical approaches as well as behavioural and biological perspectives. The different parts of the book provide discussions of current practice, probabilistic forecasting, the linearity in the increase of life expectancy, causes of death and the role of cohort factors. The key question in the book is whether it is possible to project future mortality accurately and if so, what is the best approach. This makes the book a valuable read to demographers, pension planners, actuaries and all those interested and/or working in modelling and forecasting mortality.

*Famine Demography*  
Tim Dyson, Cormac Ó Gráda, 2002. This book deals with the important subject of famine demography. It contains case studies of the demography of historical and more recent famines in locations as far apart as Ireland, Finland, India, Burundi, Russia, Greece, Madagascar and Japan. The authors address issues such as the role of famines in controlling population growth in the past, the nature of interactions between starvation and epidemic diseases during times of famine and the detailed demographic consequences of famines. In the latter category, issues such as the age and cause-specific profiles of excess famine mortality receive particular attention. *Famine Demography* illustrates how the demographic impacts of famines can vary according, for example, to the nature of the famine causation process and the socio-economic and demographic characteristics of the populations which are affected. The nature and basis of sex differentials in famine mortality are a recurring theme of the book, as are the implications for human fertility and migration. This is the only comparative volume of its kind. It is wide-ranging in time and place but at the same time focuses sharply on a particular subject. Consequently, its contents provide a unique understanding of famine demography which should be of interest to academics and practitioners involved in limiting the consequences of famines.

Similarity in Difference  
Christer Lundh, Satomi Kurosu, 2014-12-05. A study of marriage in preindustrial Europe and Asia that goes beyond the Malthusian East-West dichotomy to find variation within regions and commonality across regions. Since Malthus, an East-West dichotomy has been used to characterize marriage behavior in Asia and Europe. Marriages in Asia were said to be early and universal, in Europe late and non-universal. In Europe, marriages were supposed to be the result of individual choices but in Asia decided by families and communities. This book challenges this binary taxonomy of marriage patterns and family systems. Drawing on richer and more nuanced data, the authors compare the interpretations based on aggregate demographic patterns with studies of individual actions in local populations. Doing so, they are able to analyze simultaneously the influence on marriage decisions of individual demographic features, socioeconomic status and composition of the household and local conditions and the interactions of these variables. They find differences between East and West but also variation within regions and commonality across regions. The book studies local populations in Sweden, Belgium, Italy, Japan and China. Rather than a simple comparison of aggregate marriage patterns, it examines marriage outcomes and determinants of local populations in different countries using similar data and methods. The authors first present the results of comparative analyses of first marriage and remarriage.

and then offer chapters each of which is devoted to the results from a specific country Similarity in Difference is the third in a prizewinning series on the demographic history of Eurasia following *Life under Pressure* 2004 and *Prudence and Pressure* 2009 both published by the MIT Press      *Famine in Scotland - the 'Ill Years' of the 1690s* Karen J. Cullen, 2010-02-15 This book examines the climatic and economic origins of the last national famine to occur in Scotland the nature and extent of the crisis which ensued and what the impact of the famine was upon the population in demographic economic and social terms Current published knowledge about the causes extent and impact of the famine in Scotland is limited and many conclusions have been speculative in the absence of extensive research Despite the critical importance of this crisis one of the four disasters of the 1690s which are widely acknowledged to have contributed to the economic arguments in favour of the Union of the Parliaments in 1707 the topic has been largely neglected and even underplayed by historians This is the first full study of the famine providing a unique scholarly examination of the causes course characteristics and consequences of the crisis A comprehensive study of agricultural climatic economic social and demographic issues the book seeks to establish answers to the fundamental question concerning the event How serious was it Using detailed statistical and qualitative analysis it discusses the regional factors that defined the famine the impact on the population and the interconnected causes of this traumatic event      **Reflections on the Cliometrics Revolution** John S. Lyons, Louis P. Cain, Samuel H.

Williamson, 2007-12-12 This book presents memoirs of intellectual lives In conversation with cliometricians of the next generation twenty five pioneering scholars reflect on changes in the practice of economic history they have observed and have helped to bring about      **Prudence and Pressure** Noriko O. Tsuya, Feng Wang, George Alter, James Z. Lee, 2010-02-12 A study of human reproduction and social organization in preindustrial communities that reveals important similarities between Europe and Asia This pioneering study reconceptualizes the impact of social organizations economic conditions and human agency on human reproduction in preindustrial communities in Europe and Asia Unlike previous studies in which Asia is measured by European standards *Prudence and Pressure* develops a Eurasian perspective Drawing on rich new data and the tools of event history analysis the authors challenge the accepted Eurocentric Malthusian view that attributes prudence smaller families due to late marriage to the preindustrial West and pressure high mortality due to overpopulation to the East showing instead important similarities between Europe and Asia in human motivation and population behavior The authors analyze age gender family and household kinship social class and power religion culture and economic resources in order to compare reproductive strategies and outcomes They reveal underlying similarities between East and West in two major components of the reproductive regime marriage and childbearing and offer evidence showing that preindustrial reproduction was motivated and governed by human agency at least as much as by human biology *Prudence and Pressure* is part of a large scale interdisciplinary effort to use new data and methods to re examine the Malthusian paradigm of population growth It represents a significant advance in the fields of historical demography history and sociology      **Family**

**History Revisited** Richard Wall, Tamara K. Hareven, Josef Ehmer, 2001 This collection of original essays by scholars on the historical study of the family from various parts of the world represent a new departure in this field The essays cover a great variety of topics and many countries are represented The essays open up new debates and point to new directions in the field by examining dimensions of family relations that had not been sufficiently addressed in previous scholarship Life under Pressure Tommy Bengtsson, Cameron Campbell, James Z. Lee, 2009-01-23 A pioneering work in comparative history and social science that compares population behavior in response to adversity in Europe and Asia This highly original book the first in a series analyzing historical population behavior in Europe and Asia pioneers a new approach to the comparative analysis of societies in the past Using techniques of event history analysis the authors examine 100 000 life histories in 100 rural communities in Western Europe and Asia to analyze the demographic response to social and economic pressures In doing so they challenge the accepted Eurocentric Malthusian view of population processes and demonstrate that population behavior has not been as uniform as previously thought that it has often been determined by human agency particularly social structure and cultural practice The authors examine the complex relationship between human behavior and social and economic environment analyzing age gender family kinship social class and social organization climate food prices and real wages to compare mortality responses to adversity Their research at the individual household and community levels challenges the previously accepted characterizations of social and economic behavior in Europe and Asia in the past The originality of the analysis as well as the geographic breadth and historical depth of the data make Life Under Pressure a significant advance in the field of historical demography Its findings will be of interest to scholars in economics environmental studies demography history and sociology as well as the general reader interested in these subjects

**Routledge Handbook of Food and Nutrition Security** Bill Pritchard, Rodomiro Ortiz, Meera Shekar, 2016-03-31 The concept of food and nutrition security has evolved and risen to the top of the international policy agenda over the last decade Yet it is a complex and multi faceted issue requiring a broad and inter disciplinary perspective for full understanding This Handbook represents the most comprehensive compilation of our current knowledge of food and nutrition security from a global perspective It is organized to reflect the wide scope of the contents its four sections corresponding to the accepted current definitional frameworks prevailing in the work of multilateral agencies and mainstream scholarship The first section addresses the struggles and progression of ideas and debates about the subject in recent years The other sections focus on three key themes how food has been is and should be made available including by improvements in agricultural productivity the ways in which politico economic and social arenas have shaped access to food and the effects of food and nutrition systems in addressing human health known as food utilisation Overall the volume synthesizes a vast field of information drawn from agriculture soil science climatology economics sociology human and physical geography the nutrition and health sciences environmental science and development studies Encyclopedia of Time H.
