## **Population Disaster:**

World Disasters Report International Federation of Red Cross and Red Crescent Staff CP, 1993-04-29 Disaster response has been described as the last resort of the amateur an unkind assessment but not without a grain of truth Disaster generates an emotional response and new disaster organisations are born with each new disaster Lessons of the past on disaster management have to be learned anew The need to increase the professionalism of disaster response is evident All the more so as in disaster terms the world is getting worse not better Disasters become more complex frequently involving the interaction of a disaster event politics and technology The last few years have also seen a growth in research into the area of disaster response Too often however disaster researchers and disaster organisations have gone their separate ways There is a need for these two groups to get together to devise more practical and professional approaches to disaster response The World Disasters Report produced by the International Federation of Red Cross and Red Crescent Societies with the Centre for Research on the Epidemiology of Disasters is a contribution to this effort of professionalisation It provides facts and statistics analysis and an exploration of trends to dispel a number of myths about disasters and to define and advocate good practice This is the first volume of Annual Reports which will become a vital tool for all those involved in the area of disaster response

The Public Health Consequences of Disasters Eric K. Noji, 1996-11-14 Natural and man made disasters earthquakes floods volcanic eruptions industrial crises and many others have claimed more than 3 million lives during the past 20 years adversely affected the lives of at least 800 million people and caused more than 50 billion dollars in property damages A major disaster occurs almost daily in some part of the world Increasing population densities in flood plains along vulnerable coastal areas and near dangerous faults in the earth's crust as well as the rapid industrialization of developing economies are factors likely to make the threat posed by natural disasters much bigger in the future Illustrated with examples from recent research in the field this book summarizes the most pertinent and useful information about the public health impact of natural and man made disasters It is divided into four sections dealing with general concerns geophysical events weather related problems and human generated disasters The author starts with a comprehensive discussion of the concepts and role of surveillance and epidemiology highlighting general environmental health concerns such as sanitation water shelter and sewage The other chapters based on a variety of experiences and literature drawn from both developing and industrialized countries cover discrete types of natural and technological hazards addressing their history origin nature observation and control Throughout the book the focus is on the level of epidemiologic knowledge on each aspect of natural and man made disasters Exposure disease and health event surveillance are stressed because of the importance of objective data to disaster epidemiology In addition Noji pays particular attention to prevention and control measures and provides practical recommendations in areas in which the public health practitioner needs more useful information He advocates stronger epidemiologic awareness as the basis for better understanding and control of disasters A

comprehensive theoretical and practical treatment of the subject The Public Health Consequences of Disasters is an invaluable tool for epidemiologists disaster relief specialists and physicians who treat disaster victims
