Bittles,Peter A. Parsons,2016-07-27 The collected papers in this volume cover the effects of environmental stress under a biological and energetic model Examples are taken from fossil and living animal populations and from outlier human populations and traditional societies These examples indicate that stress increases energy demands and so reduces reproductive fitness A wide range of stressful situations also are analyzed under the less stringent conditions experienced by modern human populations when cultural factors assume importance These emphasize the interaction between genetic physiological psychological and social factors in everyday life and in clinical settings      **Elements of Physical Biology** Alfred James Lotka,1925 General principles Kinetics Statics Dynamics      *The Genetics of Political Behavior* Michael Ryan,2020-11-29 In this unique amalgam of neuroscience genetics and evolutionary psychology Ryan argues that leftists and rightists are biologically distinct versions of the human species that came into being at different moments in human evolution The book argues that the varying requirements of survival at different points in history explain

why leftists and rightists have anatomically different brains as well as radically distinct behavioral traits Rightist traits such as callousness and fearfulness emerged early in evolution when violence was pervasive in human life and survival depended on the fearful anticipation of danger Leftist traits such as pro sociality and empathy emerged later as environmental adversity made it necessary for humans to live in larger social groups that required new adaptive behavior The book also explores new evolutionary theories that emphasize the role of the environment in shaping not only human political behavior but also humans genetic architecture With implications for the future of politics the book explores how the niche worlds we build for ourselves through political action can have consequences for the evolution of the species Proposing a new way of understanding human politics this is fascinating reading for students and academics in psychology the social sciences and humanities as well as general readers interested in political behavior

The Evolution of Human Populations in Arabia Michael D. Petraglia, Jeffrey I. Rose, 2009-11-27 The romantic landscapes and exotic cultures of Arabia have long captured the interests of both academics and the general public alike The wide array and incredible variety of environments found across the Arabian peninsula are truly dramatic Tropical coastal plains are found bordering up against barren sandy deserts high mountain plateaus are deeply incised by ancient river courses As the birthplace of Islam the recent history of the region is well documented and thoroughly studied However legendary explorers such as T E Lawrence Wilfred Thesiger and St John Philby discovered hints of a much deeper past during their travels across the subcontinent Drawn to Arabia by the magnificent solitude of its vast sand seas these intrepid adventurers learned from the Bedouin how to penetrate its deserts and returned with stirring accounts of lost civilizations among the wind swept dunes We now know that prior to recorded history Arabia housed countless peoples living a variety of lifestyles including some of the world's earliest pastoralist communities of incipient farmers fishermen dubbed the Ichthyophagi by ancient Greek geographers and Paleolithic big game hunters who were among the first humans to depart their ancestral homeland in Africa In fact some archaeological investigations indicate that Arabia was inhabited by early hominins extending far back into the Early Pleistocene perhaps even into the Late Pliocene

**Handbook of the Life Course** Michael J. Shanahan, Jeylan T. Mortimer, Monica Kirkpatrick Johnson, 2015-10-26 Building on the success of the 2003 Handbook of the Life Course this second volume identifies future directions for life course research and policy The introductory essay and the chapters that make up the five sections of this book show consensus on strategic next steps in life course studies These next steps are explored in detail in each section Section I on life course theory provides fresh perspectives on well established topics including cohorts life stages and legal and regulatory contexts It challenges life course scholars to move beyond common individualistic paradigms Section II highlights changes in major institutional and organizational contexts of the life course It draws on conceptual advances and recent empirical findings to identify promising avenues for research that illuminate the interplay between structure and agency It examines trends in family school and workplace as well as contexts that deserve heightened attention including the

military the criminal justice system and natural and man made disaster The remaining three sections consider advances and suggest strategic opportunities in the study of health and development throughout the life course They explore methodological innovations including qualitative and three generational longitudinal research designs causal analysis growth curves and the study of place Finally they show ways to build bridges between life course research and public policy
