Estimating Presence and Abundance of Closed Populations George A. F. Seber, Matthew R. Schofield, 2023-12-01 This comprehensive book covers a wide variety of methods for estimating the sizes and related parameters of closed populations With the effect of climate change and human territory invasion we have seen huge species losses and a major biodiversity decline Populations include plants trees various land and sea animals and some human populations With such a diversity of populations an extensive variety of different methods are described with the collection of different types of data For example we have count data from plot sampling which can also allow for incomplete detection There is a large chapter on occupancy methods where a major interest is determining whether a particular species is present or not Citizen and opportunistic survey data can also be incorporated A related topic is species methods where species richness and species interactions are of interest A variety of distance methods are discussed One can use distances from points and lines as well as nearest neighbor distances The applications are extensive and include marine acoustic and aerial surveys using multiple observers or detection devices Line intercept measurements have a role to play such as for example estimating parameters relating to plant coverage An increasingly important class of removal methods considers successive removals from a population with physical removal or removal by capture recapture of marked individuals With the change in ratio method removals are taken from two or more classes e g males and females Effort data used for removals can also be used A very important method for estimating abundance is the use of capture recapture data collected discretely or continuously and can be analysed using both frequency and Bayesian methods Computational aspects of fitting Bayesian models are described A related topic of growing interest is the use of spatial and camera methods With the plethora of models there has been a corresponding development of various computational methods and packages which are often mentioned throughout Covariate data is being used more frequently which can reduce the number of unknown parameters by using logistic and loglinear models An important computational aspect is that of model selection methods The book provides a useful list of over 1400 references

Monitoring Bird Populations by Point Counts, 1995 *Integrated Population Models* Michael Schaub, Marc Kéry, 2021-11-12 Integrated Population Models Theory and Ecological Applications with R and JAGS is the first book on integrated population models which constitute a powerful framework for combining multiple data sets from the population and the individual levels to estimate demographic parameters and population size and trends These models identify drivers of population dynamics and forecast the composition and trajectory of a population Written by two population ecologists with expertise on integrated population modeling this book provides a comprehensive synthesis of the relevant theory of integrated population models with an extensive overview of practical applications using Bayesian methods by means of case studies The book contains fully documented complete code for fitting all models in the free software R and

JAGS It also includes all required code for pre and post model fitting analysis Integrated Population Models is an invaluable reference for researchers and practitioners involved in population analysis and for graduate level students in ecology conservation biology wildlife management and related fields The text is ideal for self study and advanced graduate level courses Offers practical and accessible ecological applications of IPMs integrated population models Provides full documentation of analyzed code in the Bayesian framework Written and structured for an easy approach to the subject especially for non statisticians

Petersen, 2024-05-02 This book highlights the principles of psychological assessment to help researchers and clinicians better develop evaluate administer score integrate and interpret psychological assessments It discusses psychometrics reliability and validity the assessment of various psychological domains behavior personality intellectual functioning various measurement methods e g questionnaires observations interviews biopsychological assessments performance based assessments and emerging analytical frameworks to evaluate and improve assessment including generalizability theory structural equation modeling item response theory and signal detection theory The text also discusses ethics test bias and cultural and individual diversity Key Features Gives analysis examples using free software Helps readers apply principles to research and practice Provides text analysis code syntax R output figures and interpretations integrated to guide readers Uses the freely available petersenlab package for R Principles of Psychological Assessment With Applied Examples in R is intended for use by graduate students faculty researchers and practicing psychologists

Infectious Disease Ecology and Conservation Johannes Foufopoulos, Gary A. Wobeser, Hamish McCallum, 2022-02-10 Emerging infectious diseases pose an increasingly serious threat to a number of endangered or sensitive species and are increasingly recognized as one of the major factors driving species extinction Despite the significant impact of pathogens on conservation no single book has yet integrated the theoretical principles underlying disease transmission with the practical health considerations for helping wildlife professionals and conservation biologists to manage disease outbreaks and conserve biodiversity This novel and accessible book starts with a foundational section focusing on the role of pathogens in natural ecosystems the dynamics of transmission in different environments and the factors driving wildlife disease outbreaks It then moves on to more applied issues concerned with the acquisition of field data including sampling experimental design and analysis as well as diagnostic analyses in both the laboratory and field Guidelines for effective modelling and data analysis follow before a final section is devoted to disease prevention and control including the prevention of novel outbreaks the use of diseases as biocontrol agents and the associated issues of ethics public communication and outreach Infectious Disease Ecology and Conservation is primarily aimed at advanced undergraduates graduate students and established researchers in the fields of conservation biology disease ecology population ecology and veterinary science It will also be a valuable reference for conservation practitioners land managers and wildlife professionals who are required to deal with disease outbreak problems

Ethical Considerations and Bias Detection in Artificial

Intelligence/Machine Learning Applications Jayesh Rane, Reshma Amol Chaudhari, Nitin Liladhar Rane, 2025-07-10 At a time when artificial intelligence AI and machine learning ML are used to make sensitive societal decisions such as the ones related to criminal justice healthcare finance education employment algorithmic fairness and bias mitigation are among the most important but challenging issues at hand The goal of this book is to provide a holistic view across various disciplines of the ethical base detection methods and technical measures for trustworthy AI systems Starting from a solid foundation of statistical bias transparency systems and fairness aware ML models this book methodically looks at state of the art methodologies where we highlight their shortcomings and introduce a unified model framework for detecting bias and transparent algorithms Moving beyond technical diagnoses it examines key sociotechnical and policy tools that are required to implement AI responsibly providing guidance to researchers engineers policy makers and organizational leaders Literature review has been driven following the experimental case the fairness trade offs intersectional bias explainability and regulatory compliance are discussed in depth by the authors This work underscores that fairness in automated decision making systems depends not only on algorithmic accuracy but also institutional will and stakeholder engagement The chapters in this book function as both an academic primer and a resourceful handbook transitioning readers through an ever growing ethical AI terrain Whether you are a data scientist building and deploying an algorithm that encourages ethical speech or a regulator working to create and refine guidelines around such algorithms this book provides you with both the tools and the understanding you need for ethical technology development and deployment

Simone Panigada, Vincent Ridoux, Ayaka Amaha Ozturk, Nejla Bejaoui, Oliver Boisseau, 2024-11-20 It is estimated that almost 10% of the worldwide marine biodiversity is encountered in the Mediterranean Sea which only represents 1% of oceans seas Whales dolphins and other marine megafauna seabirds turtles large fish play a key role in maintaining the equilibrium of marine ecosystems and are an essential component of the natural heritage of Mediterranean and Black Sea countries However these species face a variety of significant threats risk of collisions with maritime traffic bycatch in fishing gears habitat degradation acoustic disturbance chemical pollution and marine litter climate change The ACCOBAMS Survey Initiative ASI is a pilot program aimed at establishing an integrated and coordinated monitoring system for cetaceans throughout the entire ACCOBAMS area Mediterranean and Black Seas Conducted in coordination with riparian countries it supports the implementation of European and regional policies in particular the Marine Strategy Framework Directive MSFD EU and the Ecosystem Approach process Barcelona Convention UNEP MAP In summer 2018 2019 a synoptic line transect sampling survey was carried out across the Black Sea Mediterranean Sea and contiguous Atlantic area combining visual methods aerial surveys and visual and passive acoustic monitoring PAM from vessels focused primarily on deep diving species and areas where aerial surveys were not possible

Monitoring Threatened Species and Ecological Communities

Sarah Legge,Natasha Robinson,Benjamin Scheele,David Lindenmayer,Darren Southwell,Brendan Wintle,2018-01-20

Monitoring is integral to all aspects of policy and management for threatened biodiversity It is fundamental to assessing the conservation status and trends of listed species and ecological communities Monitoring data can be used to diagnose the causes of decline to measure management effectiveness and to report on investment It is also a valuable public engagement tool Yet in Australia monitoring threatened biodiversity is not always optimally managed Monitoring Threatened Species and Ecological Communities aims to improve the standard of monitoring for Australia s threatened biodiversity It gathers insights from some of the most experienced managers and scientists involved with monitoring programs for threatened species and ecological communities in Australia and evaluates current monitoring programs establishing a baseline against which the quality of future monitoring activity can be managed Case studies provide examples of practical pathways to improve the quality of biodiversity monitoring and guidelines to improve future programs are proposed This book will benefit scientists conservation managers policy makers and those with an interest in threatened species monitoring and management

Hierarchical Modeling and Inference in Ecology J. Andrew Royle,Robert M. Dorazio,2008-10-15 A guide to data collection modeling and inference strategies for biological survey data using Bayesian and classical statistical methods This book describes a general and flexible framework for modeling and inference in ecological systems based on hierarchical models with a strict focus on the use of probability models and parametric inference Hierarchical models represent a paradigm shift in the application of statistics to ecological inference problems because they combine explicit models of ecological system structure or dynamics with models of how ecological systems are observed The principles of hierarchical modeling are developed and applied to problems in population metapopulation community and metacommunity systems The book provides the first synthetic treatment of many recent methodological advances in ecological modeling and unifies disparate methods and procedures The authors apply principles of hierarchical modeling to ecological problems including occurrence or occupancy models for estimating species distribution abundance models based on many sampling protocols including distance sampling capture recapture models with individual effects spatial capture recapture models based on camera trapping and related methods population and metapopulation dynamic models models of biodiversity community structure and dynamics Wide variety of examples involving many taxa birds amphibians mammals insects plants Development of classical likelihood based procedures for inference as well as Bayesian methods of analysis Detailed explanations describing the implementation of hierarchical models using freely available software such as R and WinBUGS Computing support in technical appendices in an online companion web site **Feigin and Cherry's Textbook of Pediatric Infectious**

Statistical Approaches to Measurement Invariance Roger E. Millsap,2012-03-29 This book reviews the statistical procedures used to detect measurement bias Measurement bias is examined from a general latent variable perspective so as to accommodate different forms of testing in a variety of contexts including cognitive or clinical variables attitudes personality dimensions or emotional states Measurement models that underlie psychometric practice are described including their strengths and limitations Practical strategies and examples for dealing with bias detection are provided throughout The book begins with an introduction to the general topic followed by a review of the measurement models used in psychometric theory Emphasis is placed on latent variable models with introductions to classical test theory factor analysis and item response theory and the controversies associated with each being provided Measurement invariance and bias in the context of multiple populations is defined in chapter 3 followed by chapter 4 that describes the common factor model for continuous measures in multiple populations and its use in the investigation of factorial invariance Identification problems in confirmatory factor analysis are examined along with estimation and fit evaluation and an example using WAIS R data The factor analysis model for discrete measures in multiple populations with an emphasis on the specification identification estimation and fit evaluation issues is addressed in the next chapter An MMPI item data example is provided Chapter 6 reviews both dichotomous and polytomous item response scales emphasizing estimation methods and model fit evaluation The use of models in item response theory in evaluating invariance across multiple populations is then described including an example that uses data from a large scale achievement test Chapter 8 examines item bias evaluation methods that use observed scores to match individuals and provides an example that applies item response theory to data introduced earlier in the book The book concludes with the implications of

measurement bias for the use of tests in prediction in educational or employment settings A valuable supplement for advanced courses on psychometrics testing measurement assessment latent variable modeling and or quantitative methods taught in departments of psychology and education researchers faced with considering bias in measurement will also value this book
