Ecological Economics Michael Common, Sigrid Stagl, 2005-10-13 Taking as its starting point the interdependence of the economy and the natural environment this book provides a comprehensive introduction to the emerging field of ecological economics The authors who have written extensively on the economics of sustainability build on insights from both mainstream economics and ecological sciences Part I explores the interdependence of the modern economy and its

environment while Part II focuses mainly on the economy and on economics Part III looks at how national governments set policy targets and the instruments used to pursue those targets Part IV examines international trade and institutions and two major global threats to sustainability climate change and biodiversity loss Assuming no prior knowledge of economics this textbook is well suited for use on interdisciplinary environmental science and management courses It has extensive student friendly features including discussion questions and exercises keyword highlighting real world illustrations further reading and website addresses

Spatiotemporal Environmental Health Modelling: A Tractatus Stochasticus George Christakos, Dionissios Hristopulos, 2013-04-17 Spatiotemporal Environmental Health Modelling A Tractatus Stochasticus provides a holistic conceptual and quantitative framework for Environmental Health Modelling in space time The holistic framework integrates two aspects of Environmental Health Science that have been previously treated separately the environmental aspect which involves the natural processes that bring about human exposure to harmful substances and the health aspect which focuses on the interactions of these substances with the human body Some of the fundamental issues addressed in this work include variability scale uncertainty and space time connectivity These topics are important in the characterization of natural systems and health processes Spatiotemporal Environmental Health Modelling A Tractatus Stochasticus explains why modern stochastics is the appropriate mechanical vehicle for addressing such issues in a rigorous way In particular modern stochastics incorporates concepts and methods from probability classical statistics geostatistics statistical mechanics and field theory The authors present a synthetic view of environmental health that embraces all of the various components and focuses on their mutual interactions Spatiotemporal Environmental Health Modeling A Tractatus Stochasticus includes new material on Bayesian maximum entropy estimation techniques and space time random field estimation methods The authors show why these methods have clear advantages over the classical geostatistical estimation procedures and how they can be used to provide accurate space time maps of environmental health processes Also included are expositions of diagrammatic perturbation and renormalization group analysis which have not been previously discussed within the context of Environmental Health Finally the authors present stochastic indicators that can be used for large scale characterization of contamination and investigations of health effects at the microscopic level This book will be a useful reference to both researchers and practitioners of Environmental Health Sciences It will appeal specifically to environmental engineers geographers geostatisticians earth scientists toxicologists epidemiologists pharmacologists applied mathematicians physicists and biologists
