Understanding Natural Language

Understanding Erik Cambria, 2024-10-22 About half a century ago AI pioneers like Marvin Minsky embarked on the ambitious

project of emulating how the human mind encodes and decodes meaning While today we have a better understanding of the brain thanks to neuroscience we are still far from unlocking the secrets of the mind especially when it comes to language the prime example of human intelligence Understanding natural language understanding i e understanding how the mind encodes and decodes meaning through language is a significant milestone in our journey towards creating machines that genuinely comprehend human language Large language models LLMs such as GPT 4 have astounded us with their ability to generate coherent contextually relevant text seemingly bridging the gap between human and machine communication Yet despite their impressive capabilities these models operate on statistical patterns rather than true comprehension This textbook delves into the nuanced differences between these two paradigms and explores the future of AI as we strive to achieve true natural language understanding NLU LLMs excel at identifying and replicating patterns within vast datasets producing responses that appear intelligent and meaningful They can generate text that mimics human writing styles provide summaries of complex documents and even engage in extended dialogues with users However their limitations become evident when they encounter tasks that require deeper understanding reasoning and contextual knowledge An NLU system that deconstructs meaning leveraging linguistics and semiotics on top of statistical analysis represents a more profound level of language comprehension It involves understanding context in a manner similar to human cognition discerning subtle meanings implications and nuances that current LLMs might miss or misinterpret NLU grasps the semantics behind words and sentences comprehending synonyms metaphors idioms and abstract concepts with precision This textbook explores the current state of LLMs their capabilities and limitations and contrasts them with the aspirational goals of NLU The author delves into the technical foundations required for achieving true NLU including advanced knowledge representation hybrid AI systems and neurosymbolic integration while also examining the ethical implications and societal impacts of developing AI systems that genuinely understand human language Containing exercises a final assignment and a comprehensive quiz the textbook is meant as a reference for courses on information retrieval AI NLP data analytics data mining and more
