

PRODUCING EFFECTIVE GRAPHS WITH SASGRAPH® SOFTWARE

Introduction

Effective graphs clarify and focus data. They are accurate, unambiguous, readable, and attractive. Effective graphs are the result of attention to visual details, focus on critical information, and conscientious presentation of data in an appropriate form. This paper explores some characteristics of effective graphs and shows how **SALICRAPH** software helps you produce graphs that are informative, complete, and clear.

Part 1: Using Grouped Elements Effectively

From a design perspective, graphs are made up of many elements such as typefaces, lines, symbols, patterns, and so forth. The treatment of these elements affects the graph's clarity and ability to convey information. If the elements embody the design principles of simplicity, focus, contrast, and legibility, the graph will be readable and attractive. Otherwise, the graph risks being cluttered, confusing, and unintelligible. This part presents some principles of good graphic design and demonstrates how to apply these principles in the design and production of your graphs.

Guideline 3: Provide Legible Text

Text in a graph should be informative and readable, not decorative. In addition, it should draw attention to the most important areas of the graph.

Make the Text Large Enough to be Readable

When designing text, consider whether the reader will view the graph on a printed page, as a slide, on an overhead transparency, or on a computer screen, and adjust the text size accordingly. In **GRAPHGRAPH** software, you can easily control the size of titles and other text for one graph or for a series of graphs with the **HTITLE=** and **HTEXT=** graphics options in a **GOPTIONS** statement.

When specifying text height, consider both the size of the characters and the units. Specifying text height in terms of percentage of the graphics output area keeps the text in proportion to the overall dimensions of the output regardless of the output device. To make percent the default unit for most size specifications, specify `GRAPHICS=PPCT` in the

(OPTIONAL) statement. These graphics options set the height of the first title (5 percent) and all other text height (4.5 percent) in Output 1:

Limit Markedness in Types to One or Two per Group

Since graphs typically contain two types of information — information about the graph (such as titles or footnotes), and information that is part of the graph (such as legends and axis labels or values) — two distinct typefaces or styles are usually adequate. Here are two approaches to selecting type:

Using two typefaces. Select one typeface for displaying text such as titles and footnotes, and another typeface for labels for parts of the graph (axes, tick marks, bars), comments, or other general text. You can specify type for the entire graph with the `FTITLE` and `FTEXT` graphics options in a `GOPTIONS` statement. `FTITLE` affects the first title (generated by the `TITLE1` statement) and `FTEXT` affects the rest of the text.

Cheng, H. H., & Wang, S. (2005).

Be sure to choose distinct typefaces. Typically, one serif face and one sans serif face make a good combination. This GDSII/CHPL statement specifies Zapf (a serif font) for the first title and Swiss (a sans serif font) for all other text in Chapter 1:

In addition, the second title and the footnote also use *slant* so that they match the first title. Font
