Middleware Solutions for Wireless Internet of Things Paolo Bellavista, Carlo Giannelli, Sajal K. Das, Jiannong Cao, 2019-07-15 The proliferation of powerful but cheap devices together with the availability of a plethora of wireless technologies has pushed for the spread of the Wireless Internet of Things WIoT which is typically much more heterogeneous dynamic and general purpose if compared with the traditional IoT The WIoT is characterized by the dynamic interaction of traditional infrastructure side devices e g sensors and actuators provided by municipalities in Smart City infrastructures and other portable and more opportunistic ones such as mobile smartphones opportunistically integrated to dynamically extend and enhance the WIoT environment A key enabler of this vision is the advancement of software and middleware technologies in various mobile related sectors ranging from the effective synergic management of wireless communications to mobility adaptivity support in operating systems and differentiated integration and management of devices with heterogeneous capabilities in middleware from horizontal support to crowdsourcing in different application domains to dynamic offloading to cloud resources only to mention a few The book presents state of the art contributions in the articulated WIoT area by providing novel insights about the development and adoption of middleware solutions to enable the WIoT vision in a wide spectrum of heterogeneous scenarios ranging from industrial environments to educational devices The presented solutions provide readers with differentiated point of views by demonstrating how the WIoT vision can be applied to several aspects of

Tirró,1993-06-30 Writing a comprehensive book on satellite communications requires the command of many technical disciplines and the availability of up to date information on international recommendations system architectures and equipment standards It is therefore necessary to involve many authors each possessing a good level of knowledge in a particular discipline The problem of using a coherent and unambiguous set of definitions and basic terms has been solved by including in the book all the background information needed for understanding satellite communication systems without any major reference to other textbooks specializing in particular disciplines The obvious consequence of this approach has been the large size of the book with the advantages however of practically complete independence from other books more systematic discussion of the subject matter and better readability After the required background information emphasis has been placed on the discussion of techniques and system design criteria rather than on specific equipment implementation or description of particular systems The book may be divided in five parts as follows The first five chapters provide most of the required background information Chapter 6 is an introductory outline of satellite communication systems Chapters 7 to 13 deal with the various aspects of technical system design Chapter 14 discusses system economics Chapter 15 provides a brief insight into some foreseeable future developments of satellite communications **Communication Satellite Systems Technology** Richard B. Marsten,2014-12-03 Communication Satellite Systems Technology reviews the state of the art in communication satellite systems technology Topics covered range from commercial point to point systems and military satellite communication systems to satellite support subsystems and components along with high power systems Communication satellites are also discussed from a sociological perspective Comprised of 50 chapters this book begins with a 1945 article by Arthur C Clarke in which he proposed the construction of rocket space stations in orbit that would provide complete radio coverage of the globe as well as extraterrestrial relay services The reader is then introduced to the Early Bird satellite and its hydrogen peroxide orbit control and orientation system Details of the sequence of maneuvers required after transfer ellipse injection until final placement in a stationary orbit are given The methods of calculation of maneuver parameters as well as numerical examples of certain Early Bird orbit changes and maneuver parameters are described The effects of the principal long term disturbing forces on the satellite are also considered Subsequent chapters focus on military satellite communication systems satellite support subsystems and components high power systems and systems concepts The organization and program of Intelsat are also evaluated This monograph will be of value to practitioners in the fields of aeronautics astronautics and satellite communications *Dept. of the Air Force* United States.
