**Satellite Communications Systems** Madhavendra Richharia, 1995      *Satellite Communication Systems Design* S. Tirró, 1993-06-30 Writing a comprehensive book on satellite communications requires the command of many technical disciplines and the availability of up to date information on international recommendations system architectures and equipment standards. It is therefore necessary to involve many authors each possessing a good level of knowledge in a particular discipline. The problem of using a coherent and unambiguous set of definitions and basic terms has been solved by including in the book all the background information needed for understanding satellite communication systems without any major reference to other textbooks specializing in particular disciplines. The obvious consequence of this approach has been the large size of the book with the advantages however of practically complete independence from other books, more systematic discussion of the subject matter and better readability. After the required background information, emphasis has been placed on the discussion of techniques and system design criteria rather than on specific equipment implementation or description of particular systems. The book may be divided in five parts as follows. The first five chapters provide most of the required background information. Chapter 6 is an introductory outline of satellite communication systems. Chapters 7 to 13 deal with the various aspects of technical system design. Chapter 14 discusses system economics. Chapter 15 provides a brief insight into some foreseeable future developments of satellite communications.

B.G. Evans, 1999 Updates from unremarked dates material used in the Institute s vacation schools at Surrey University which over the past 15 years have become the de facto industry standard in satellite communications The approach concentrates on the design and planning of systems includes little theory and just quotes equations rather than deriving them New material has been added on the history and background of the field the business aspects of satellite communications and on new applications in mobile and personal communication systems multimedia systems military business and small satellites navigation and positioning Graduate undergraduate and practicing engineers should benefit from the treatment Annotation copyrighted by Book News Inc Portland OR      *Distributed Satellite Communications System Design* Jennifer Elizabeth Underwood, 2005 Cont Traditionally the first step toward designing satellite communication systems as well as terrestrial sensor web and ad hoc networks has been to specify the system topology e g the orbits of the satellites and the locations of the ground stations based on the desired market and then to design the network protocols to make the most of the available resources Such a sequential process assumes that the design of the network architecture e g protocols packet structure etc does not drive the design of the system architecture e g constellation topology spacecraft design etc This thesis will show that in the case of Ka band distributed satellite communication systems this fundamental assumption is not valid and can have a significant impact on the success cost capacity customer satisfaction of the resulting
