Genetically Modified Diplomacy Peter Andr  e, 2011-11-01 When genetically engineered seeds were first deployed in the Americas in the mid 1990s, the biotechnology industry and its partners envisaged a world in which their crops would be widely accepted as the food of the future. Critics, however, raised a variety of social, environmental, economic, and health concerns. This book traces the emergence of the 2000 Cartagena Protocol on Biosafety and the discourse of precaution toward GEOs that the protocol institutionalized internationally. Peter Andr  e explains this reversal in the common sense understanding of genetic engineering and discusses the new debates it has engendered.

Unsustainable World Peter N. Nemetz, 2022-02-27 Using a cross-disciplinary science and economics-based approach, this book provides a sobering and comprehensive assessment of the multifaceted barriers to achieving sustainability at a global level. Organized into three parts, the book defines sustainability in part I and sets the context of the historical and current difficulties facing the world today. In parts II and III, it outlines the sustainability challenges faced in transportation, manufacturing, and agriculture and then, in turn, addresses the solutions, conditional solutions, and nonsolutions to these challenges. These include electric and autonomous automobiles, nuclear power, renewable energy, geoengineering, and carbon capture and storage. The author attempts to differentiate among those proposed solutions and discusses which are most promising and which are infeasible, counterproductive, and potentially a waste of time and money. In each of the book's chapters, the scientific evidence is presented in detail, in keeping with the advice of the young Swedish climate activist Greta Thunberg to let the science speak for itself. The author outlines why sustainability is unlikely to be achieved in several key areas of human endeavor, and readers are challenged to weigh the scientific evidence for themselves. Using an economic business-based approach, this book introduces students and general readers to the challenges of sustainability and the environmental difficulties facing humanity today.

The Delusion of Atheism Patrick Mooney, 2020-09-29 Both atheistic materialism and organized religion have been the two great forces which have had the greatest mind control over Western Civilization's perception and value system Both systems have used their power to keep humanity in subjugation and slavery through the tactics of fear and terror Both systems have denied humanity the dignity of its true Divine identity When social systems exist for the sole purpose of strengthening and propelling their own self interest rather the welfare of its citizens then the matrix in which humanity lives becomes corrupt and decadent When a people are denied the understanding of their own self concept as a unique person and a child of God they become disassociated from their own holographic identity Nature does not tolerate a vacuum Dystopia rushes in to replace the void caused by the split

or the dualism which both atheism and organized religion cause in world which some non local Supreme Intelligence created for a more noble purpose Atheistic Materialism denies the existence of A Creator and is pessimistically Nihilistic Organized Religion while admitting an Omega or an absolute divides the soul from the body and turns this world Into a vale of tears The New Science of Quantum Physics teaches that the Whole is greater than the sum of its parts and the substrata of the atom is consciousness Quantum teaches the Cosmos is one There is no separation All that exists is linked together in the one reality of interdependence interconnection and interrelationship Consciousness is eternal It carries on after the atoms of our bodies have deteriorated and gone Consciousness tells us that despite the momentary reality of our bodies we are spiritually eternal Materialistic Atheism is temporary and built of the false promise of economy and profit It proposes tragedy instead of ecstasy Consciousness joins body and soul together Life in this world in other world is a continuum Life here is sacred and must be lived in this respect Whether we like it or not we are doomed to be spiritual It is the human spirit which is primary Consciousness teaches us this Terribly Atheism has inverted this It makes the body and its temporality primary It forgets and denies humanity s need for transcendence Atheism stultifies It concerns itself with grasping rather than reaching Atheism is greedy It is anti compassion This world will surely fail unless we begin to become aware that love is our highest

Since the Limits to Growth report was published in 1972 it has been widely known that a commitment to endless growth was putting us on course for environmental disaster so why have we failed to take decisive political action in the half century since then In *The Meaning of Growth* Richard McNeill Douglas uses interpretive social science to uncover the cultural roots of political resistance to environmental science and policy Through a close reading of anti environmentalist rhetoric the book identifies its idolisation of growth as a defence of a modern Western European world view focusing on values of freedom power and immortality The significance of these findings is drawn out by applying the secularisation thesis a theoretical account of the development of a modern understanding of reality from a theological world view to which it is ostensibly opposed This framework is used to offer a deep interpretation of what is at stake in environmental debate that to accept there are limits to growth means abandoning crucial elements of a faith in a theodicy of progress that makes life meaningful in a secular age Douglas concludes by suggesting that the precondition for political action on the environment is a change of philosophical perspective that provides for a sense of meaning in a world of limits This book should be of interest to

academics in the fields of environmental sociology and communications studies as well as activists interested in understanding the motivations of anti environmentalist campaigners and how to counter their influence
