

## Emerging technology snapshot

# Directed energy weapons

Directed energy weapons (DEWs) use concentrated energy from electromagnetic or particle technology, rather than kinetic energy, to degrade or destroy targets. DEWs have the capability to damage physical targets over several kilometers with high precision and accuracy. As the technology advances, weaponized directed energy (DE) systems are becoming more powerful, prevalent, and increasingly integrated into air, land and sea platforms.

## Enabling Science and Technology

### High energy lasers

High Energy Lasers (HELs) have significant advantages over conventional munitions, such as the ability to engage targets at the speed of light with pinpoint accuracy and a virtually unlimited magazine. However, they can be adversely affected by atmospheric conditions like rain or fog.

### High power microwaves

High power microwave weapons (HPM) have a shorter range than HELs and their beam degrades over long distances, but they are not affected by weather and can impact targets over a wide area.

### Millimeter waves

Millimeter wave directed energy has various non-lethal military applications, including crowd control and area denial. Although proven to be very safe, millimeter wave energy has the capability to produce significant injuries.

### Particle beams

Particle beam weapons have strong penetration ability, high speed, high energy and can operate in all weather conditions. However, the technology is extremely complex with many challenges to overcome before it can be used in combat.

### Space

Directed energy applications in space are the focus of much research, including using DE for propelling spacecraft, intercepting satellites or deflecting comets or asteroids threatening earth.

"The weapons have potential to be game-changers in the near future and revolutionary in the long term. They could provide a number of capabilities and advantages over traditional weapons because of their speed-of-light delivery, precision engagement, controlled/scalable effects, logistical benefits and low cost per shot."
