wonder The groundbreaking scientist Alexander von Humboldt claimed that everything here is grander and more majestic than in the Swiss Alps the Pyrenees the Carpathians the Apennines and all other mountains I have known Rivaled in height only by the Himalayas and stretching more than 4 500 miles the sheer immensity of the Andes is matched by its concentration of radically contrasting scenery and climates and the rich and diverse cultures of the people who live there In this remarkable book travel writer Michael Jacobs journeys across seven different countries from the balmy Caribbean to the inhospitable islands of the Tierra del Fuego through the relics of ancient civilizations and the remnants of colonial rule retracing the footsteps of previous travelers His route begins in Venezuela following the path of the great nineteenth century revolutionary Sim n Bol var but soon diverges to include accounts from sources as varied as Humboldt the young Charles Darwin and Bol var s extraordinary and courageous mistress Manuela Saenz On his way Jacobs uncovers the stories of those who have shared his fascination and discovers the secrets of a region steeped in history science and myth Mountains of the World Edwin Bernbaum, 2022-03-10 From the Andes to the Himalayas mountains have an extraordinary power to evoke a sense of the sacred In the overwhelming wonder and awe that these dramatic features of the landscape awaken people experience something of deeper significance that imbues their lives with meaning and vitality Drawing on his extensive research and personal experience as a scholar and climber Edwin Bernbaum's Sacred Mountains of the World takes the reader on a fascinating journey exploring the role of mountains in the mythologies religions history literature and art of cultures around the world Bernbaum delves into the spiritual dimensions of mountaineering and the implications of sacred mountains for environmental and cultural preservation This beautifully written evocative book shows how the contemplation of sacred mountains can transform everyday life even in cities far from the peaks themselves Thoroughly revised and updated this new edition considers additional sacred mountains as well as the impacts of climate change on the sacredness of mountains An Open Door in Brazil James Porter Smith, 1925 All nations [afterw.] The Missionary review of all nations. North American Exploration John Logan Allen, 1997-01-01 The third volume of North American Exploration covering 1784 to 1914 charts a dramatic shift in the purpose priorities and results of the exploration of North America As the nineteenth century opened exploration was still fostered by the growth of empire but by the 1830s commercial interests came to drive most exploratory ventures particularly through the fur trade By midcentury however as imperial rivalries lessened and the fur trade declined exploration was driven by the growing scientific spirit of the age although the science was often conducted in the service of a search for railroad routes or natural resources linked to military concerns A clear transition took place as the spirit of the Enlightenment gave way to economic imperatives and to the science of the post Darwinian age and exploration passed beyond discovery and geographical definition This volume explores the resultant beginnings of an understanding of the continent and its native peoples *Imaginary Peaks* Katie Ives, 2021-10-01 2022 Banff Mountain Book Competition Special Jury Mention A book every thoughtful adventurer and seeker of dreams should read Outside Using an infamous deception about a fake mountain range in British Columbia as her jumping off point Katie Ives the well known editor of Alpinist explores the lure of blank spaces on the map and the value of the imagination In Imaginary Peaks she details the cartographical mystery of the Riesenstein Hoax within the larger context of climbing history and the seemingly endless quest for newly discovered peaks and claims of first ascents Imaginary Peaks is an evocative thought provoking tale immersed in the literature of exploration study of maps and basic human desire **Legions of Space** Keith Laumer, 2004
