Model Systems In Biological Psychiatry:

Model Systems in Biology Georg Striedter, 2022-08-23 How biomedical research using various animal species and in vitro cellular systems has resulted in both major successes and translational failure In Model Systems in Biology comparative neurobiologist Georg Striedter examines how biomedical researchers have used animal species and in vitro cellular systems to understand and develop treatments for human diseases ranging from cancer and polio to Alzheimer's disease and schizophrenia Although there have been some major successes much of this translational research on model systems has failed to generalize to humans Striedter explores the history of such research focusing on the models used and considering the question of model selection from a variety of perspectives the philosophical the historical and that of practicing biologists Striedter reviews some philosophical concepts and ethical issues including concerns over animal suffering and the compromises that result He traces the history of the most widely used animal and in vitro models describing how they compete with one another in a changing ecosystem of models He examines how therapies for bacterial and viral infections cancer cardiovascular diseases and neurological disorders have been developed using animal and cell culture models and how research into these diseases has both taken advantage of and been hindered by model system differences Finally Striedter argues for a big tent biology in which a diverse set of models and research strategies can coexist productively

Model Systems in Biological Psychiatry David Ingle, Harvey M. Shein, 1975 *Models of Mental Disorders* William T. McKinney Jr., 2012-12-06 My ideas for this book have been evolving over the last several years as I have been working in the animal modeling area and have seen it change rather dramatically There have been tremendous advances both in methodology and in conceptualization yet the literature is scattered in journals encompassing many disciplines In particular there have been only very limited attempts to write about the philosophical conceptual and controversial issues in this field to pull together diverse findings and to provide some general perspective on its future As will probably be apparent I am a clinical psychiatrist who also has a fundamental interest in animal behavior especially primate social behavior I entered the field from a clinical research standpoint to develop some animal models of depression after being stimulated to do so by Dr William Bunney then at the National Institute of Mental Health and now at the University of California Irvine The field has grown rapidly since then and there is considerable research activity Indeed the research activity has grown more rapidly than our conceptualization of what animal models are and are not Animal preparations are now available for studying specific aspects of certain types of psychopathology Thoughtful workers in the animal modeling field no longer talk about comprehensive models but rather about more limited experimental preparations in animals for studying certain specific aspects of human psychopathology Animal Models of Depression KOOB, EHLERS, KUPFER, 2012-12-06 Animal models represent experimental investigations developed in one species for the purpose of studying phenomena in another species and provide numerous advantages for preclinical research They allow scientists greater control and isolation of important

experimental variables Animal models are safe reproducible strategies by which to evaluate and design new pharmacological treatment strategies while also allowing direct central nervous system intervention to alter the course of the aberrant behavior Animal models have been developed for a number of mental illnesses in this particular domain they hold the promise to shed light on the still obscure etiologies of these illnesses and ultimately to facilitate the development and testing of cures Yet true models of mental illness are difficult to develop because mental illness may be a uniquely human phenomenon It was based on these considerations that the MacArthur Foundation Research Network on the Psychobiology of Depression set out to sponsor a conference to review the status problems promises and relevance of animal models to the clinical conditions of affective disorders The conference was held in September 1986 and included participants from both within the Network as well as scientists and scholars from various disciplines relevant to the concerns of the conference After the conference was held it became clear to the organizers that the material presented could be helpful to a broader field of investigators since a significant portion of the information has not been presented elsewhere or in the unified context of a monograph

Zangwill, 1983-01-28 This 1986 volume was the first of five which together give a comprehensive account of clinical psychiatry in the 1980s and its scientific foundations After an introductory section about the historical background and the evolution of some basic concepts clinical phenomena are described and discussed The book concludes with a section in which mental disorders are classified and their assessment diagnosis and treatment detailed Each chapter is written by a recognised authority in the field and the book includes a comprehensive bibliography and cross references to the other volumes in the series
