Area Network P. J. Fortier, 1989-01-01 **Simulation of Local Area Networks** Matthew N. O. Sadiku, 2018-01-18 A fast growing area in the communications industry is the internetworking of an ever increasing proliferation of computers particularly via local area networks LANs The LAN is a resource sharing data communications network being used by many offices to interchange information such as electronic mail word processing and files among computers and other devices This unique book shows the user how to establish the performance characteristics of a LAN before putting it to use in a particular type of situation Simulation of Local Area Networks consists of eight chapters each with its own extensive list of references The first chapter provides a brief review of local area networks and the second chapter gives the analytical models of popular LANs token passing bus and ring networks CSMA CD LANs and star networks Chapter 3 covers general principles of simulation and Chapter 4 discusses fundamental concepts in probability and statistics relating to simulation modeling Materials in Chapters 3 and 4 are specifically applied in developing simulation models on token passing LANs CSMA CD LANs and star LANs in Chapters 5 through 7 The computer code in Chapters 5 6 and 7 is divided into segments and a detailed explanation of each segment is provided The last chapter reviews special purpose languages such as GPSS SIMSCRIPT GASP SIMULA SLAM and RESQ Helpful criteria for language selection are included The entire code is put together in the appendixes This book has two major advantages over existing texts First it uses C a well developed general purpose language that is familiar to most analysts Second the text specifically applies the simulation principles to local area networks No other book available shows the systems analyst how to evaluate the performance of existing or proposed systems under different kinds of conditions *CRC Handbook of Local Area Network Software* Paul L. Fortier, 2018-01-17

Local Area Networks LANs play a larger role in our lives today than ever before For example LANs provide us with the capability to realize automated banking services with instant credit checking and numerous other diverse access and manipulation services Users and developers of LAN products must understand the architecture of the hardware and software mechanisms to effectively design and use such systems Most gains in LAN productivity will come from future software developments in systems management and applications This book provides an introduction to the technology associated with Local Area Networks emphasizing software aspects which have been secondary considerations to hardware in most existing texts The book also provides a review of the technology needed to realize full service software products such as computer aided design and manufacturing systems large publication systems and integrated data service networks and includes an exhaustive review of the products available today
