Kommission,1977 *Performance of Computer Systems* Mátyás Arató,A. V. Butrimenko,Erol Gelenbe,International Institute for Applied Systems Analysis,1979 The Fourth International Symposium on Modelling and Performance Evaluation of Computer Systems organized in Europe by the IFIP Working Group 7.3 was held in Vienna under the auspices of the Technical University and the International Institute for Applied Systems Analysis These proceedings are a collection of contributions to computer system performance and a few invited papers representing novel contributions made during the last year Major areas for application of the ideas herein presented are computer architectures data bases computer networks and capacity planning Workload Modeling for Computer Systems Performance Evaluation Dror G. Feitelson,2015-03-23 Reliable performance evaluations require the use of representative workloads This is no easy task since modern computer systems and their workloads are complex with many interrelated attributes and complicated structures Experts often use sophisticated mathematics to analyze and describe workload models making these models difficult for practitioners to grasp This book aims to close this gap by emphasizing the intuition and the reasoning behind the definitions and derivations related to the workload models It provides numerous examples from real production systems with hundreds of graphs Using this book readers will be able to analyze collected workload data and clean it if necessary derive statistical models that include skewed marginal distributions and correlations and consider the need for generative models and feedback from the system The descriptive statistics techniques covered are also useful for other domains **Workload Modeling for Computer Systems Performance Evaluation** Dror G. various types of blocking mechanisms It gives a comprehensive definition of the analytical model underlying these blocking queueing networks It surveys exact and approximate analytical solution methods and algorithms and their relevant properties It also presents various application examples of queueing networks to model computer systems and communication networks This book is organized in three parts Part I introduces queueing networks with blocking and various application examples Part II deals with exact and approximate analysis of queueing networks with blocking and the condition under which the various techniques can be applied Part III presents a review of various properties of networks with blocking describing several equivalence properties both between networks with and without blocking and between different blocking types Approximate solution methods for the buffer allocation problem are presented **NBS Special Publication** ,1968
