Modelling Seasonality:

Modelling Seasonality Svend Hylleberg, 1992 This volume brings together leading papers on the existing standard economic theory of seasonality as well as papers which apply newer statistical tools to the modelling of seasonal phenomena It includes a discussion of the X 11 method of seasonal adjustment as well as an assessment of recent developments in the field

The Econometric Analysis of Seasonal Time Series Eric Ghysels, Denise R. Osborn, 2001-06-18 Eric Ghysels and Denise R Osborn provide a thorough and timely review of the recent developments in the econometric analysis of seasonal economic time series summarizing a decade of theoretical advances in the area The authors discuss the asymptotic distribution theory for linear nonstationary seasonal stochastic processes They also cover the latest contributions to the theory and practice of seasonal adjustment together with its implications for estimation and hypothesis testing Moreover a comprehensive analysis of periodic models is provided including stationary and nonstationary cases The book concludes with a discussion of some nonlinear seasonal and periodic models The treatment is designed for an audience of researchers and advanced graduate students

Econometric Forecasting and High-frequency Data Analysis Roberto S. Mariano, Yiu Kuen Tse, 2008 This important book consists of surveys of high frequency financial data analysis and econometric forecasting written by pioneers in these areas including Nobel laureate Lawrence Klein Some of the chapters were presented as tutorials to an audience in the Econometric Forecasting and High Frequency Data Analysis Workshop at the Institute for Mathematical Science National University of Singapore in May 2006 They will be of interest to researchers working in macroeconometrics as well as financial econometrics Moreover readers will find these chapters useful as a guide to the literature as well as suggestions for future research

Modelling Trends and Cycles in Economic Time Series Terence C. Mills, 2021-07-29 Modelling trends and cycles in economic time series has a long history with the use of linear trends and moving averages forming the basic tool kit of economists until the 1970s Several developments in econometrics then led to an overhaul of the techniques used to extract trends and cycles from time series In this second edition Terence Mills expands on the research in the area of trends and cycles over the last almost two decades to highlight to students and researchers the variety of techniques and the considerations that underpin their choice for modelling trends and cycles

Seasonality, Rural Livelihoods and Development Stephen Devereux, Rachel Sabates-Wheeler, Richard Longhurst, 2013-07-03 Seasonality is a severe constraint to sustainable rural livelihoods and a driver of poverty and hunger particularly in the tropics Many poor people in developing countries are ill equipped to cope

with seasonal variations which can lead to drought or flood and consequences for agriculture employment food supply and the spread of disease The subject has assumed increasing importance as climate change and other forms of development disrupt established seasonal patterns and variations This book is the first systematic study of seasonality for over twenty years and it aims to revive academic interest and policy awareness of this crucial but neglected issue Thematic chapters explore recent shifts with profound implications for seasonality including climate change HIV AIDS and social protection Case study chapters explore seasonal dimensions of livelihoods in Africa Ethiopia Kenya Malawi Asia Bangladesh China India and Latin America Peru Others assess policy responses to adverse seasonality for example through irrigation migration and seasonally sensitive education The book also includes innovative tools for monitoring seasonality which should enable more appropriate responses

Forecasting, Structural Time Series Models and the Kalman Filter Andrew C. Harvey, 1990-02-22 In this book Andrew Harvey sets out to provide a unified and comprehensive theory of structural time

series models Unlike the traditional ARIMA models structural time series models consist explicitly of unobserved components such as trends and seasonals which have a direct interpretation As a result the model selection methodology associated with structural models is much closer to econometric methodology The link with econometrics is made even closer by the natural way in which the models can be extended to include explanatory variables and to cope with multivariate time series From the technical point of view state space models and the Kalman filter play a key role in the statistical treatment of structural time series models The book includes a detailed treatment of the Kalman filter This technique was originally developed in control engineering but is becoming increasingly important in fields such as economics and operations research This book is concerned primarily with modelling economic and social time series and with addressing the special problems which the treatment of such series poses The properties of the models and the methodological techniques used to select them are illustrated with various applications These range from the modelling of trends and cycles in US macroeconomic time series to an evaluation of the effects of seat belt legislation in the UK

Time Series Analysis and Macroeconometric Modelling Kenneth Frank Wallis, 1995-01-01 An excellent reference volume of this author's work bringing together articles published over a 25 year span on the statistical analysis of economic time series large scale macroeconomic modelling and the interface between them Aslib Book Guide This major volume of essays by Kenneth F Wallis features 28 articles published over a quarter of a century on the statistical analysis of economic time series large scale macroeconomic modelling and the interface between them The first part deals with time series econometrics and includes significant early contributions to the development of the LSE tradition in time series econometrics which is the dominant British tradition and has considerable influence worldwide Later sections discuss theoretical and practical issues in modelling seasonality and forecasting with applications in both large scale and small scale models The final section summarizes the research programme of the ESRC Macroeconomic Modelling Bureau a unique comparison project among economy wide macroeconomic models

has adapted to changing demands by adopting new insights from economic theory and by taking advantage of the methodological and conceptual advances within time series econometrics

Readings in Unobserved Components Models Andrew C. Harvey, Tommaso Proietti, 2005 This volume presents a collection of readings which give the reader an idea of the nature and scope of unobserved components UC models and the methods used to deal with them The book is intended to give a self contained presentation of the methods and applicative issues Harvey has made major contributions to this field and provides substantial introductions throughout the book to form a unified view of the literature About the Series Advanced Texts in Econometrics is a distinguished and rapidly expanding series in which leading econometricians assess recent developments in such areas as stochastic probability panel and time series data analysis modeling and cointegration In both hardback and affordable paperback each volume explains the nature and applicability of a topic in greater depth than possible in introductory textbooks or single journal articles Each definitive work is formatted to be as accessible and convenient for those who are not familiar with the detailed primary literature
