**Models for Behavior** Thomas D. Wickens,1982      *Dynamical Models In Neurocognitive Psychology* Ralf

Engbert,2021-03-02 The development of cognitive models is a key step in the challenging research program to advance our understanding of human cognition and behavior Dynamical models represent a general and flexible approach to cognitive modeling This introduction focuses on applications of stochastic processes and dynamical systems to model cognition The dynamical approach is particularly useful to emphasize the strong link between experimental research and its paradigms data analysis and mathematical models including their computer implementation for numerical simulation Most of specific examples are from the domain of eye movement research with concepts being applicable to a broad range of problems in cognitive modeling The textbook aims at the graduate and or advanced undergraduate level for students in Cognitive Science and related disciplines such as Psychology and Computer Science Joint introduction of the theory of cognitive processes and mathematical models their underlying mathematical concepts numerical simulation and analysis The focus on eye movements provide a theoretically coherent but very general application area Computer code in R Programming Language for Statistical Computing is available for all examples figures and solutions to exercises      *Dynamic Process Methodology in the Social and Developmental Sciences* Jaan Valsiner,Peter C. M. Molenaar,Maria C.D.P. Lyra,Nandita Chaudhary,2009-07-09 All psychological processes like biological and social ones are dynamic Phenomena of nature society and the human psyche are context bound constantly changing and variable This feature of reality is often not recognized in the social sciences where we operate with averaged data and with homogeneous stereotypes and consider our consistency to be the cornerstone of rational being Yet we are all inconsistent in our actions within a day or from one day to the next and much of such inconsistency is of positive value for our survival and development Our inconsistent behaviors and thoughts may appear chaotic yet there is generality within this highly variable dynamic The task of scientific methodologies qualitative and quantitative is to find out what that generality is It is the aim of this handbook to bring into one framework various directions of construction of methodology of the dynamic processes that exist in the social sciences at the beginning of the 21st century This handbook is set up to bring together pertinent methodological scholarship from all over the world and equally from the quantitative and qualitative orientations to methodology In addition to consolidating the pertinent knowledge base for the purposes of its further growth this book serves the major educational role of bringing practitioners students researchers and professionals interested in applications the state of the art know how about how to think about extracting evidence from single cases and about the formal mathematical statistical tools to use for these purposes      **Computational Modeling in Cognition** Stephan Lewandowsky,Simon Farrell,2010-11-29 An accessible introduction to the principles of computational and mathematical modeling in psychology and cognitive science This practical and readable work provides students and researchers who are new to cognitive modeling with the background and core knowledge they need to interpret published

reports and develop and apply models of their own The book is structured to help readers understand the logic of individual component techniques and their relationships to each other

**Modern Psychometrics with R** Patrick Mair, 2018-09-20 This textbook describes the broadening methodology spectrum of psychological measurement in order to meet the statistical needs of a modern psychologist The way statistics is used and maybe even perceived in psychology has drastically changed over the last few years computationally as well as methodologically R has taken the field of psychology by storm to the point that it can now safely be considered the lingua franca for statistical data analysis in psychology The goal of this book is to give the reader a starting point when analyzing data using a particular method including advanced versions and to hopefully motivate him or her to delve deeper into additional literature on the method Beginning with one of the oldest psychometric model formulations the true score model Mair devotes the early chapters to exploring confirmatory factor analysis modern test theory and a sequence of multivariate exploratory method Subsequent chapters present special techniques useful for modern psychological applications including correlation networks sophisticated parametric clustering techniques longitudinal measurements on a single participant and functional magnetic resonance imaging fMRI data In addition to using real life data sets to demonstrate each method the book also reports each method in three parts first describing when and why to apply it then how to compute the method in R and finally how to present visualize and interpret the results Requiring a basic knowledge of statistical methods and R software but written in a casual tone this text is ideal for graduate students in psychology Relevant courses include methods of scaling latent variable modeling psychometrics for graduate students in Psychology and multivariate methods in the social sciences

**Classification and Cognition** William K. Estes, 1994-01-06 Based on Estes important Fitts Lectures this volume details a set of psychological concepts and principles that offers a unified interpretation of a wide variety of memory categorization and decision making phenomena These phenomena are explained via two families of models established by the author a storage retrieval model and an adaptive network model Estes considers whether the models are competing or complementary offering cogent and instructive arguments for both perspectives Estes theory is then applied to two large scale series of studies on category learning and recognition providing an integrated understanding of seemingly disparate phenomena This book is the culmination of the author s more than ten years of research in the field and stands as a great achievement by one of this century s eminent psychologists It will be indispensable to a wide variety of behavioral scientists including mathematical and cognitive psychologists

**Perceiving Talking Faces** Dominic W. Massaro, 1998 This book discusses the author s experiments on the use of multiple cues in speech perception and other areas and unifies the results through a logical model of perception

**Model-Based Demography** Thomas K. Burch, 2017-10-14 Late in a career of more than sixty years Thomas Burch an internationally known social demographer undertook a wide ranging methodological critique of demography This open access volume contains a selection of resulting papers some previously unpublished some published but not readily accessible from past meetings of The International Union for the Scientific Study of Population and its research committees or from other small conferences and seminars Rejecting the idea that demography is simply a branch of applied statistics his work views it as an autonomous and complete scientific discipline When viewed from the perspective of modern philosophy of science specifically the semantic or model based school demography is a balanced discipline with a rich body of techniques and data but also with more and better theories than generally recognized As demonstrated in this book some demographic techniques can also be seen as theoretical models and some substantive behavioral models commonly rejected as theory because of inconsistent observations are now seen as valuable theoretical models for example demographic transition theory

This book shows how demography can build a strong theoretical edifice on its broad and deep empirical foundation by adoption of the model based approach to science But the full fruits of this approach will require demographers to make greater use of computer modeling both macro and micro simulation in the statement and manipulation of theoretical ideas as well as for numerical computation This book is open access under a CC BY license **NIDA Research Monograph** ,1976

Analyzing Interaction Roger Bakeman,Vicenc Quera,1995-07-28 Analyzing Interaction provides the practical underpinning and tools to carry out the sorts of sequential analyses essential to social psychology **Social Dilemmas and Cooperation** Ulrich Schulz,Wulf Albers,Ulrich Mueller,2012-12-06 A social dilemma is a game which at first glance has only inefficient solutions If efficient solutions are to be achieved some kind of cooperation among the players is required This book asks two basic questions closely intertwined with each other 1 How is cooperation possible among rational players in such a social dilemma Which changes in the social context of a social dilemma situation are necessary in order for players to rationally choose the cooperative option 2 How do real players actually behave in social dilemma situations Do they behave rationally at all Or conversely what kind of reasoning attitudes emotions etc shape the behavior of real players in social dilemmas What kind of interventions what kind of internal mechanisms within a real group may change players willingness to cooperate These two general questions mark the broad spectrum of the problem which has been over the last three decades investigated in various disciplines and which has brought many new ideas and new observations into the study of the old question of social order in a world of born egoists Accordingly this volume contains contributions by biologists sociologists political scientists economists mathematicians psychologists and philosophers **Communication Yearbooks Vols 6-33 Set** Various,2021-12-02 The Communication Yearbook annuals originally published between 1977 and 2009 publish diverse state of the discipline literature reviews that advance knowledge and understanding of communication systems processes and impacts across the discipline Topics dealt with include Communication as Process Research Methodology in Communication Communication Effects Taxonomy of Communication and European Communication Theory Information Systems Division Mass Communication Research Mapping the Domain of Intercultural Communication Public Relations Feminist Scholarship Communication Law and Policy Visual Communication Communication and Cross Sex Friendships Across the Life Cycle Television Programming and Sex Stereotyping InterCultural Communication Training Leadership and Relationships Media Performance Assessment Cognitive Approaches to Communication Library of Congress Subject Headings Library of Congress.
