

learning exist across a broad taxonomic range? What are the common biological features of a learned response?

DISEASES AND AGING

This subject was chosen because of its close relationship to the mission of the NIH. The committee asked scientists studying certain pathological and aging processes to explain how information from model systems is most useful in furthering understanding and in developing treatment strategies for gerontological disorders and for certain selected disease states.

DEVELOPMENT

This workshop was designed to use phylogenetic breadth and experimental accessibility to examine the early stages of morphogenesis, to explore the underlying cellular and molecular mechanisms, and to identify common features. Particular emphasis was placed on induction and repression of gene expression.

THEORY (MATHEMATICAL MODELLING)

Unlike the case-study workshops, which were organized around particular biological problems or processes, participants examined the application of mathematical formulations to a variety of biological processes, ranging from the molecular level to the organismal level. Theory as used here refers to mathematical and computer models, which must be verified by comparison with biological systems.

THE WORKSHOP FORMATS

The case-study workshop participants were selected because their research lies at the frontier of their field and exemplifies new or extended use of models or model systems. Each workshop opened with an introductory talk by a leading researcher, who presented an overview of the field to be explored. This was followed by presentations of 8 to 10 papers, each 30 to 40 minutes in length. The participants were asked to present critical reviews of their specialty areas, giving special attention to the models or model systems used, their strengths and limitations, and their potentials for further development. Brief discussions followed each presentation. In a separate discussion session at the end of each workshop, participants and committee members were encouraged to comment and speculate about the general use and limitations of models, to give examples of the use of various models to elucidate important medical problems, and to comment on the transferability of information among biological systems.
