Models Of Cognitive Development:

Models Of Cognitive Development Ken Richardson, 2019-07-12 In spite of its obvious importance and popularity the field of cognitive development remains highly fragmented due to the vast diversity of models of what knowledge and reasoning are and how they develop This new Classic Edition of Models of Cognitive Development aims to overcome this barrier through its careful introduction illustrated examples and approach to helping students think more critically about the subject In this significant work Richardson provides students researchers and comparative theoreticians with a cohesive understanding of the area by organizing diverse schools frameworks and approaches according to a much smaller set of underlying assumptions or preconceptions which themselves can be historically interrelated By understanding these it is possible to find pathways around the area more confidently as a whole to see the wood as well as the theoretical trees and be able to react to individual models more critically and constructively The Classic Edition of this core text will be essential reading for undergraduate and graduate students of cognitive development

Adult Cognitive Development Karen S. Kitchener, 1986

Children's Understanding Graeme S. Halford, 2014-02-25 This work argues that cognitive development is experience driven and processes entailed in acquiring information about the world are analyzed based on recent models of learning and induction The way information is represented and accessed when performing cognitive tasks is considered paying particular attention to the implications of Parallel Distributed Processing PDP models for cognitive development The first half of the book contains analyses of human reasoning processes drawing on PDP models of analogy development of strategies and task complexity all based on aspects of PDP representations It is proposed that PDP representations become more differentiated with age so more vectors can be processed in parallel with the result that structures of greater complexity can be processed This model gives an account of previously unexplained difficulties in children's reasoning including some which were influential in stage theories The second half of the book examines processes entailed in some representative cognitive developmental tasks including transitive inference deductive inference categorical syllogisms hypothesis testing learning set acquisition acquisition and transfer of relational structures humor hierarchical classification and inclusion understanding of quantity arithmetic word problems algebra conservation mechanics and the concept of mind Process accounts of tasks are emphasized based on applications of recent developments in cognitive science

Neo-Piagetian Theories of Cognitive Development Andreas Demetriou, Anastasia Efklides, Dr Michael Shayer, Michael Shayer, 2005-06-20 Educationalists espoused Piaget's theory of cognitive development with enthusiasm in the late 1960's Since then however Piaget's models have been widely criticised and have fallen out of favour The Neo Piagetians as they have been dubbed attempt to preserve the best of traditional Piagetian ideas and combine them with the results of recent empirical research In this collection an international array of the world's leading scholars show how new research and diverse research traditions can be reconciled with many of Piaget's models to provide useful insights into many of the

problems faced by researchers in educational settings Cognitive Development Lisa Oakley, 2004-09-02 Cognitive Development provides a detailed and accessible account of three main areas theories of cognitive development the development of measured intelligence and the development of moral understanding The theories of Piaget Vygotsky Eisenburg and Bruner are discussed The book is suitable for the AQA A A2 level examination and students studying cognitive development for the first time at undergraduate level The Routledge Modular Psychology series is a completely new approach to introductory level psychology tailor made for the new modular style of teaching Each book covers a topic in more detail than any large text book can allowing teacher and student to select material exactly to suit any particular course or project Especially written for those students new to higher level study whether at school College or university the books include the following designed features to help with technique practise essays with specialist commentary to show how to achieve a higher grade chapter summaries and summaries of key research glossary and further reading progress and review exercises Series editors Cara Flanagan is a Reviser for AS and A2 level Psychology and an experienced teacher and examiner Philip Banyard is Associate Senior Lecturer in Psychology at Nottingham Trent University and a Chief Examiner for AS and A2 level Psychology *Neurocomputational Models Of Cognitive Development And Processing - Proceedings Of The 14th Neural Computation And Psychology Workshop* Alastair Smith, Padraic Monaghan, Katherine Twomey, Gert Westermann, 2016-09-29 This volume presents peer reviewed versions of papers presented at the 14th Neural Computation and Psychology Workshop NCPW14 which took place in July 2014 at Lancaster University UK The workshop draws international attendees from the cutting edge of interdisciplinary research in psychology computational modeling artificial intelligence and psychology and aims to drive forward our understanding of the mechanisms underlying a range of cognitive processes *The Child as Thinker* Sara Meadows, 2012-09-10 This second edition of *The Child as Thinker* has been thoroughly revised and updated to provide an informed and accessible overview of the varied and extensive literature on children s cognition Both theory and research data are critically examined and educational implications are discussed After a brief discussion of the nature and subject of cognition Sara Meadows reviews children s thinking in detail She discusses the ways children remember and organise information in general the acquisition of skills such as reading writing and arithmetic and the development of more complex reasoning as children grow to maturity As well as studies that typically describe a generalised child the book also reviews some of the main areas relevant to individual differences in normal cognitive development and critically examines three major models of cognitive development In outlining the work of Piaget information processing accounts and neo Vygotskian theories she also evaluates their different explanations of cognitive development and their implications for education Finally the book examines biological and social factors that may be involved in normal and suboptimal cognitive development Sara Meadows provides an important review of the crucial issues involved in understanding cognitive development and of the new data and models that have emerged in the last few years This book

brings together areas and approaches that have hitherto been independent and examines their strengths and weaknesses The Child as Thinker is essential reading for all students of cognitive development

Developing Cognitive Competence

Tony J. Simon, Graeme S. Halford, 2015-05-15 Although computational modeling is now a widespread technique in cognitive science and in psychology relatively little work in developmental psychology has used this technique The approach is not entirely new as a small group of researchers has attempted to create computational accounts of cognitive developmental phenomena since the inception of the technique It should seem obvious that transition mechanisms or how the system progresses from one level of competence to the next ought to be the central question for investigation in cognitive developmental psychology Yet if one scans the literature of modern developmental studies it appears that the question has been all but ignored However only recently have advances in computational technology enabled the researcher access to fully self modifying computer languages capable of simulating cognitive change By the beginning of the 1990s increasing numbers of researchers in the cognitive sciences were of the opinion that the tools of mathematical modeling and computer simulation make theorizing about transition mechanisms both practical and beneficial by using both traditional symbolic computational systems and parallel distributed processing or connectionist approaches Computational models make it possible to define the processes that lead to a system being transformed under environmental influence from one level of competence observed in children to the next most sophisticated level By coding computational models into simulations of actual cognitive change they become tangible entities that are accessible to systematic study Unfortunately little of what has been produced has been published in journals or books where many professionals would easily find them Feeling that developmental psychologists should be exposed to this relatively new approach a symposium was organized at the biennial meeting of the Society for Research in Child Development The cost of entry was that speakers had to have a running computational model of a documented cognitive transition Inspired by that conference this volume is the first collection where each content chapter presents a fully implemented self modifying simulation of some aspect of cognitive development Previous collections have tended to discuss general approaches less than fully implemented models or non self modifying models Along with introductory and review chapters this volume presents a set of truly developmental computational models a collection that can inform the interested researcher as well as form the basis for graduate level courses

Recent Advances in Cognitive-Developmental Theory

Charles J. Brainerd, 2012-12-06 For some time now the study of cognitive development has been far and away the most active discipline within developmental psychology Although there would be much disagreement as to the exact proportion of papers published in developmental journals that could be considered cognitive 50% seems like a conservative estimate Hence a series of scholarly books devoted to work in cognitive development is especially appropriate at this time The Springer Series in Cognitive Development contains two basic types of books namely edited collections of original chapters by several authors and original volumes written by one author or a small group

of authors The flagship for the Springer Series is a serial publication of the advances type carrying the subtitle Progress in Cognitive Development Research Each volume in the Progress sequence is strongly thematic in that it is limited to some well defined domain of cognitive developmental research e g logical and mathematical development development of learning All Progress volumes will be edited collections Editors of such collections upon consultation with the Series Editor may elect to have their books published either as contributions to the Progress sequence or as separate volumes All books written by one author or a small group of authors are being published as separate volumes within the series

Handbook of Child Psychology and Developmental Science, Theory and Method, 2015-03-31 The essential reference for human development theory updated and reconceptualized The Handbook of Child Psychology and Developmental Science a four volume reference is the field defining work to which all others are compared First published in 1946 and now in its Seventh Edition the Handbook has long been considered the definitive guide to the field of developmental science Volume 1 Theory and Method presents a rich mix of classic and contemporary theoretical perspectives but the dominant views throughout are marked by an emphasis on the dynamic interplay of all facets of the developmental system across the life span incorporating the range of biological cognitive emotional social cultural and ecological levels of analysis Examples of the theoretical approaches discussed in the volume include those pertinent to human evolution self regulation the development of dynamic skills and positive youth development The research methodological and applied implications of the theoretical models discussed in the volume are presented Understand the contributions of biology person and context to development within the embodied ecological system Discover the relations among individual the social world culture and history that constitute human development Examine the methods of dynamic developmental research Learn person oriented methodological approaches to assessing developmental change The scholarship within this volume and as well across the four volumes of this edition illustrate that developmental science is in the midst of a very exciting period There is a paradigm shift that involves increasingly greater understanding of how to describe explain and optimize the course of human life for diverse individuals living within diverse contexts This Handbook is the definitive reference for educators policy makers researchers students and practitioners in human development psychology sociology anthropology and neuroscience

Connectionist Models of Development Philip T. Quinlan, 2003 Connectionist Models of Development is an edited collection of essays on the current work concerning connectionist or neural network models of human development The brain comprises millions of nerve cells that share myriad connections and this book looks at how human development in these systems is typically characterised as adaptive changes to the strengths of these connections The traditional accounts of connectionist learning based on adaptive changes to weighted connections are

explored alongside the dynamic accounts in which networks generate their own structures as learning proceeds Unlike most connectionist accounts of psychological processes which deal with the fully mature system this text brings to the fore a discussion of developmental processes To investigate human cognitive and perceptual development connectionist models of learning and representation are adopted alongside various aspects of language and knowledge acquisition There are sections on artificial intelligence and how computer programs have been designed to mimic the development processes as well as chapters which describe what is currently known about how real brains develop This book is a much needed addition to the existing literature on connectionist development as it includes up to date examples of research on current controversies in the field as well as new features such as genetic connectionism and biological theories of the brain It will be invaluable to academic researchers post graduates and undergraduates in developmental psychology and those researching connectionist neural networks as well as those in related fields such as psycholinguistics

Cognitive Development

Sergio Morra, Camilla Gobbo, Zopito Marini, Ronald Sheese, 2012-12-06 Tying together almost four decades of neo Piagetian research Cognitive Development provides a unique critical analysis and a comparison of concepts across neo Piagetian theories Like Piaget neo Piagetian theorists take a constructivist approach to cognitive development are broad in scope and assume that cognitive development is divided into stages with qualitative differences Unlike Piaget however they define the increasing complexity of the stages in accordance with the child's information processing system rather than in terms of logical properties This volume illustrates these characteristics and evidences the exciting possibilities for neo Piagetian research to build connections both with other theoretical approaches such as dynamic systems and with other fields such as brain science The opening chapter provides a historical orientation including a critical distinction between the logical and the dialectical Piaget In subsequent chapters the major theories and experimental findings are reviewed including Pascual Leone's Theory of Constructive Operators Halford's structuralist theory Fischer's dynamic systems approach to skills Case's theory of Central

Conceptual Structures Siegler's microgenetic approach and the proposals of Mounoud and Karmiloff Smith as well as the work of others including Demetriou and de Ribaupierre The interrelation of emotional and cognitive development is discussed extensively as is relevant non neo Piagetian research on information processing The application of neo Piagetian research to a variety of topics including children's problem solving psychometrics and education is highlighted The book concludes with the authors' views on possibilities for an integrated neo Piagetian approach to cognitive development

Models of Action Clive D.L. Wynne, John E.R. Staddon, 2013-06-17 This volume presents an international group of researchers who model animal and human behavior both simple and complex The models presented focus on such subjects as the pattern of eating in meals and bouts the energizing and shaping impact of reinforcers on behavior transitive inferential reasoning responding to a compound stimulus avoidance and escape learning recognition memory category formation generalization the timing of adaptive responses and chromosomes exchanging information The chapters are united by a common interest in adaptive behavior whether of human animal or artificial system and clearly demonstrate the rich variety of ways in which this fascinating area of research can be approached In so doing the book demonstrates the range of thought that qualifies as theorizing in the contemporary study of the mechanisms of adaptive behavior It has two purposes to bring together a very wide range of approaches in one place and to give authors space to explain how their ideas developed Journal literature often presents fully formed theories with no explanation of how an idea came to have the shape in which it is presented In this volume however leaders in different fields provide background on the development of their ideas Where once psychologists and a few zoologists had this field to themselves now various types of computer scientists have added great energy to the mix Intelligence and Models for Cognitive Development Linda Wänström, Stockholms universitet. Neuroconstructivism - II Denis Mareschal, Sylvain Sirois, Gert Westermann, Mark H. Johnson, 2007-01-18 What are the

processes from conception to adulthood that enable a single cell to grow into a sentient adult The processes that occur along the way are so complex that any attempt to understand development necessitates a multi disciplinary approach integrating data from cognitive studies computational work and neuroimaging an approach till now seldom taken in the study of child development Neuroconstructivism is a major new 2 volume publication that seeks to redress this balance presenting an integrative new framework for considering development Computer and robotic models provide concrete tools for investigating the processes and mechanisms involved in learning and development Volume 2 illustrates the principles of Neuroconstructivist development with contributions from 9 different labs across the world Each of the contributions illustrates how models play a central role in understanding development The models presented include standard connectionist neural network models as well as multi agent models Also included are robotic models emphasizing the need to take embodiment and brain system interactions seriously A model of Autism and one of Specific Language Impairment also illustrate how atypical development can be understood in terms of the typical processes of development but operating under restricted conditions This volume complements Volume 1 by providing concrete examples of how the Neuroconstructivist principles can be grounded within a diverse range of domains thereby shaping the research agenda in those domains **The Oxford Handbook of Developmental Psychology, Vol. 1** Philip David Zelazo, 2013-03-21 This handbook provides a comprehensive survey of what is now known about psychological development from birth to biological maturity and it highlights how cultural social cognitive neural and molecular processes work together to yield human behavior and changes in human behavior
