High Energy Astrophysics: Models And Observations From MeV To TeV Peter L Biermann, David Fegan, Fuxi Gan, Dieter H Hartmann, Richard E Lingenfelter, Pierre Sokolsky, Todor S Stanev, 1994-06-21 This book is a collection of comprehensive reviews on astrophysics at the highest energies It puts together for the first time discussions of astrophysics from MeV to EeV energies and beyond Observations at these energies reveal nuclear and particle physics throughout our galaxy as well as in the most extreme environments in the entire cosmos These reports range from the recent spectacular results from the Compton Gamma Ray Observatory including the latest information on enigmatic gamma ray bursts to cosmic rays at the highest energies ever observed by man

New Insights into High-Energy Processes on the Sun and Their Geospace Consequences Xiangliang Kong, Jing Liu, Gang Li, 2025-02-21 The Sun releases an enormous amount of energy during explosive solar activities such as solar flares and coronal mass ejections The solar corona can be heated up to tens of millions of degrees and a large number of charged particles can be accelerated to nearly the speed of light Heated plasmas and high energy particles increase solar radiations across the whole electromagnetic spectrum from radio to gamma ray wavelengths which can have a profound effect on the Earth's upper atmosphere immediately after about eight minutes These create additional ionization and heating in the Earth's upper atmosphere leading to radio blackout GNSS signal interferences and tracking loss increased drag on spacecraft etc Recent studies have demonstrated that the effects can extend to the Earth's magnetosphere via electrodynamic coupling When the high energy particles propagate through the interplanetary medium and arrive at the vicinity of the Earth known as solar energetic particle SEP events they can pose hazardous radiation threats to astronauts and spacecraft electronics in space

Quantum-like Models And Coherent Effects - Proceedings Of The 27th Workshop Of The Infn Eloisation Project Padma Kant Shukla, Renato Fedele, 1995-10-17 On July 17 2012 the centenary of Henri Poincaré's death was commemorated his name being associated with so many fields of knowledge that he was considered as the Last Universalist In Pure and Applied Mathematics Physics Astronomy Engineering and Philosophy his works have had a great impact all over the world Poincaré acquired in his lifetime such a reputation that both nationally and internationally his life and career were made the object of various articles in the daily papers not only in France but also in the USA Some of his philosophical concepts have even caused sharp controversies in the Press as we will discover in this book This work presents an original portrait of Henri Poincaré based on various press cuttings from The New York Times The San Francisco Sunday Call The Times The Sun The Washington Post that chronicled unknown anecdotes of his life for example his first name was actually not Henri but Henry he obtained his high school diploma in sciences with a zero in mathematics etc Such an approach enables the discovering of many forgotten or unknown aspects of his scientific and philosophical works as well as his important role in the public sphere

Europhysics Conference On High Energy Physics - Lp-hep '91 (In 2 Volumes) Seamus Hegarty, Keith Potter, Emanuele Quercigh, 1992-05-26 The proceedings of the Joint International Lepton Photon Symposium and Europhysics Conference on High Energy Physics cover the full range of frontline research in high energy particle physics The latest results both theoretical and experimental are presented and reviews of recent developments in instrumentation and accelerator techniques are included Volume one summarises the highly specialised topics presented in the parallel sessions while the second volume contains the review talks given by the invited speakers Fundamental Electron Interactions with Plasma

Processing Gases Loucas G. Christophorou, James K. Olthoff, 2012-12-06 This volume deals with the basic knowledge and understanding of fundamental interactions of low energy electrons with molecules It provides an up to date and comprehensive account of the fundamental interactions of low energy electrons with molecules of current interest in modern technology especially the semiconductor industry The primary electron molecule interaction processes of elastic and inelastic electron scattering electron impact ionization electron impact dissociation and electron attachment are discussed and state of the art authoritative data on the cross sections of these processes as well as on rate and transport coefficients are provided This fundamental knowledge has been obtained by us over the last eight years through a critical review and

comprehensive assessment of all available data on low energy electron collisions with plasma processing gases which we conducted at the National Institute of Standards and Technology NIST Data from this work were originally published in the Journal of Physical and Chemical Reference Data and have been updated and expanded here The fundamental electron molecule interaction processes are discussed in Chapter 1 The cross sections and rate coefficients most often used to describe these interactions are defined in Chapter 2 where some recent advances in the methods employed for their measurement or calculation are outlined The methodology we adopted for the critical evaluation synthesis and assessment of the existing data is described in Chapter 3 The critically assessed data and recommended or suggested cross sections and rate and transport coefficients for ten plasma etching gases are presented and discussed in Chapters 4 5 and 6
