Use Stephen Grabow, Kent Spreckelmeyer, 2014-10-03 By analyzing ten examples of buildings that embody the human experience at an extraordinary level this book clarifies the central importance of the role of function in architecture as a generative force in determining built form Using familiar twentieth century buildings as case studies the authors present these from a new perspective based on their functional design concepts Here Grabow and Spreckelmeyer expand the definition of human use to that of an art form by re evaluating these buildings from an aesthetic and ecological view of function Each building is described from the point of view of a major functional concept or idea of human use which then spreads out and influences the spatial organization built form and structure In doing so each building is presented as an exemplar that reaches beyond the pragmatic concerns of a narrow program and demonstrates how functional concepts can inspire great design evoke archetypal human experience and help us to understand how architecture embodies the deeper purposes and meanings of everyday life **Great Building Designs 1900 - Today** Ian Graham, 2015-08 Examines the

This work provides an insight into and an analysis of the designs selected by Seidler to be his most important. **The American Spirit in Architecture** Talbot Hamlin, 1926 *Culture and Democracy* Hugh Dalziel Duncan, 1989-01-01 This work by the late and great sociologist Hugh Dalziel Duncan paints the great panorama of the Middle West where egalitarianism is the most cherished value and money is the most important vehicle of life. How art finds a place in this society is shown in the specific struggle between the architects, businessmen, unionists, and educators of Chicago. Into such specifics, Duncan reveals the place of supposedly abstract theories developed by John Dewey, George Herbert Mead, Thorstein Veblen, and above all, Louis H. Sullivan, whose school of architecture presents both a new form of physical design and a new order of society. The rise, seeming defeat, and final triumph of Sullivan's principles of order in architecture are related to his social and aesthetic theories of form in society. In democratic society, all individuals must be capable of art, just as all individuals share in art as experience. Sullivan's description of the development within the individual of the idea of architecture is treated as an allegory of such development in the spirit of democratic values. His life is offered as a parable of the problem facing American artists as they attempt to root art in democratic culture. In Sullivan's words, "The critical study of architecture becomes not merely the direct study of art but in extenso a study of the social conditions producing it. The study of a newly shaping type of civilization. By this light, the study of architecture becomes naturally and logically a branch of social science." Duncan's exceptional volume, written with grace and clarity, registers the achievements of this Chicago School, showing how culture and democracy reached a special moment of consensus with the money-based economy of our time. *The Buildings Around Us* Thom Gorst, 1995 This introduction to buildings aims to demystify the culture of architecture. The 50 buildings here range from churches and banks to semi-detached houses and offices. The text shows how building design has evolved over the last 150 years and explains the architecture of our daily environment. **Picturepedia** DK, 2020-10-13 Science and technology, nature, geography, culture, sports, and hobbies and history all combine in this mind-blowing visual encyclopedia. Taranath, 2009-12-14 An exploration of the world of concrete as it applies to the construction of buildings Reinforced Concrete Design of Tall Buildings provides a practical perspective on all aspects of reinforced concrete used in the design of structures with particular focus on tall and ultra tall buildings Written by Dr Bungale S Taranath this work explains t Congressional Record United States. Congress, 1930 The Architecture of Rome Ulrich Fürst, 1998 Architects and artists have always acknowledged over the centuries that Rome is rightly called the eternal city Rome is eternal above all because it was always young always in its prime Here the buildings that defined the West appeared over more than 2000 years here the history of European architecture was written The foundations were laid even in ancient Roman times when the first attempts were made to design interiors and thus make space open to experience as something physical And at that time the Roman architects also started to develop building types that are still valid today thus creating the cornerstone of later Western architecture In it Rome's primacy remained unbroken whether it was with old St Peter's as the first medieval basilica or new St Peter's as the building in which Bramante and Michelangelo developed the High Renaissance or with works by Bernini and Borromini whose rich and lucid spatial forms were to shape Baroque as far as Vienna Bohemia and Lower Franconia and also with Modern buildings of which there are many unexpected pearls to be found in Rome All this is comprehensible only if it is presented historically i e in chronological sequence and so the guide has not been arranged topographically as usual but chronologically This means that one is not led in random sequence from a Baroque building to an ancient or a modern one but the historical development is followed successively Every epoch is preceded by an introduction that identifies its key features This produces a continuous lavishly illustrated history of the architecture of Rome and thus at the same time of the whole of the West Practical handling is guaranteed by an alphabetical index and detailed maps whose information does not just immediately illustrate the historical picture but also makes it possible to choose a personal route through history
