**Developments In High-Speed Vehicle Propulsion Systems** S. N. B. Murthy,E. T. Curran,1996 Annotation There have been impressive achievements in the last few years in the technologies associated with turboramjets and other combined cycle engines These technologies including their thermal management and integration with the vehicle are the principal concerns of this volume Drawing on the expertise of international engineers and researchers in the field of high speed vehicle propulsion systems these articles written by experts from the United States Russia Germany Japan Belgium and Israel highlight developments in the industry

### **The Method of Characteristics for Three-dimensional**

**Real-gas Flows** Charles R. Strom,1967 The method of characteristics is formulated for the computation of the supersonic flow of an inviscid reacting gas over a smooth three dimensional body Various methods of constructing networks of bicharacteristic lines are examined from the point of view of numerical stability and accuracy A new method of forming the network which consists of projecting forward along streamlines from data points on specified data planes is found to be most easily adopted to the particular requirements of nonequilibrium chemistry The general method was coded for the IBM 7090 computer and the program demonstrated for the case of an ideal gas Calculations were made for the case of an ideal gas Calculations were made for the flow about a spherical tip 15 degree half angle cone at 10 degree angle of attack and a generalized elliptical body at zero incidence Since the program yields the pressure distribution along specified streamlines it is straightforward in principle to link it to a finite rate chemistry stream tube program to treat three dimensional

**New Algorithms for Macromolecular Simulation** Benedict Leimkuhler,Christophe Chipot,Ron Elber,Aatto Laaksonen,Alan Mark,Tamar Schlick,Christoph Schütte,Robert Skeel,2006-03-22 Molecular simulation is a widely used tool in biology chemistry physics and engineering This book contains a collection of articles by leading researchers who are developing new methods for molecular modelling and simulation Topics addressed here include multiscale formulations for

biomolecular modelling such as quantum classical methods and advanced solvation techniques protein folding methods and schemes for sampling complex landscapes membrane simulations free energy calculation and techniques for improving ergodicity The book is meant to be useful for practitioners in the simulation community and for those new to molecular simulation who require a broad introduction to the state of the art     **Energy** ,1979     *Scientific and Technical Aerospace Reports* ,1992     **Applied Mechanics Reviews** ,1985     *High-speed Computing in Fluid Dynamics* Francois N.
