High Performance Computing and Grids in Action Lucio Grandinetti, 2008 Collects in four chapters single monographs related to the fundamental advances in parallel computer systems and their developments from different points of view from computer scientists computer manufacturers end users and related to the establishment and evolution of grids fundamentals implementation and deployment Embedded Computing Joseph A. Fisher, Paolo Faraboschi, Cliff Young, 2005-01-19 The fact that there are more embedded computers than general purpose computers and that we are impacted by hundreds of them every day is no longer news What is news is that their increasing performance requirements complexity and capabilities demand a new approach to their design Fisher Faraboschi and Young describe a new age of embedded computing design in which the processor is central making the approach radically distinct from contemporary practices of embedded systems design They demonstrate why it is essential to take a computing centric and system design

approach to the traditional elements of nonprogrammable components peripherals interconnects and buses These elements must be unified in a system design with high performance processor architectures microarchitectures and compilers and with the compilation tools debuggers and simulators needed for application development In this landmark text the authors apply their expertise in highly interdisciplinary hardware software development and VLIW processors to illustrate this change in embedded computing VLIW architectures have long been a popular choice in embedded systems design and while VLIW is a running theme throughout the book embedded computing is the core topic Embedded Computing examines both in a book filled with fact and opinion based on the authors many years of R D experience Complemented by a unique professional quality embedded tool chain on the authors website <http://www.vliw.org/book> Combines technical depth with real world experience Comprehensively explains the differences between general purpose computing systems and embedded systems at the hardware software tools and operating system levels Uses concrete examples to explain and motivate the trade offs
